As an ENERGY STAR® partner, Muratec America, Inc., has determined that this product meets the ENERGY STAR® guidelines for energy efficiency.

Trademarks

Muratec, the Muratec logo and all Muratec product names contained herein are trademarks of Muratec America, Inc.

ENERGY STAR is a registered mark of the United States Environmental Protection Agency.

Super G3 is an extension of Group 3 fax technology standards, allowing the use of high-speed ITU-T V.34 modems for 33.6 Kbps transmission and high-speed protocols for rapid handshaking.

JBIG -Joint Bi-level Image experts Group, the new ITU-T standard image data compression method. As JBIG compresses the data more efficiently than MMR, it is especially effective when transmitting halftone (grayscale) image document.

This manual and any updates to it can be found online at www.muratec.com

Go to the “Products” section of this site, then click on “MFX-2830”

Customer Support Center : 1-800-347-3296 (from the United States only)

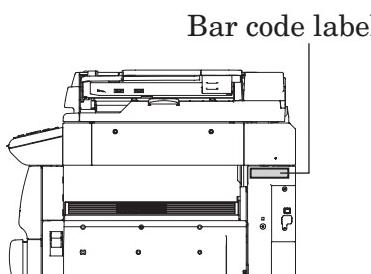

If you are not able to solve an issue by using the operators manual, please contact your authorized Muratec dealer or consult the Muratec Customer Support Center.

About the serial number

To assist the customer support specialist, please have the model number and serial number written down prior to your call.

Model Number	MFX-2830
Serial Number	DA1

The *serial number* is located on the *bar code label*

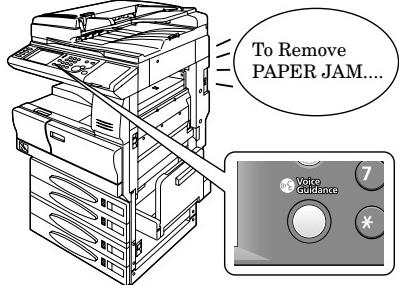

Sample of a Bar code label

Main Features

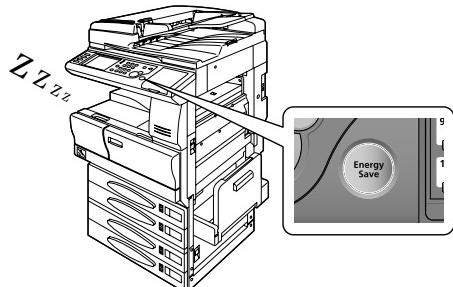

Voice Guidance

When the voice guidance feature is turned on the machine will guide you through correct operational procedures and troubleshooting methods. (see page 1-58 for instruction)

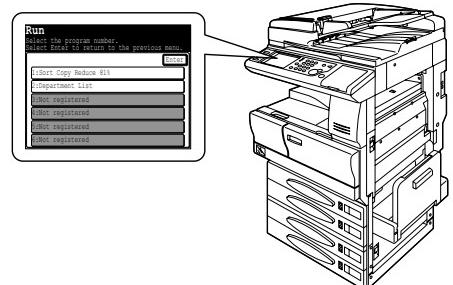

Sleep Mode

Sleep mode assists in reducing energy consumption and lowering overall operating costs. If the machine is left idle for a pre-determined amount of time the machine will automatically enter sleep mode, reducing operating power to a minimum. (see page 1-25 for instruction)

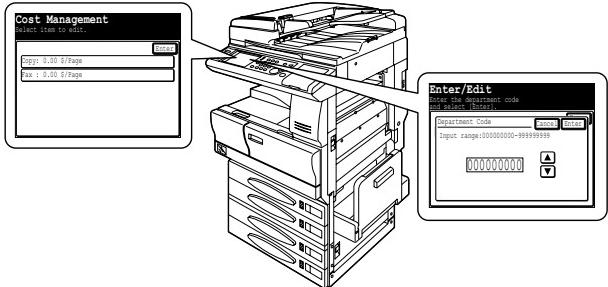

Macro Program

Programming copy jobs can be tedious, especially when you want to customize a job requiring several steps. If you regularly have to perform a job that requires multiple steps, you can program this process into a macro key, simplifying the process into one step. (see page 4-2 for instruction)

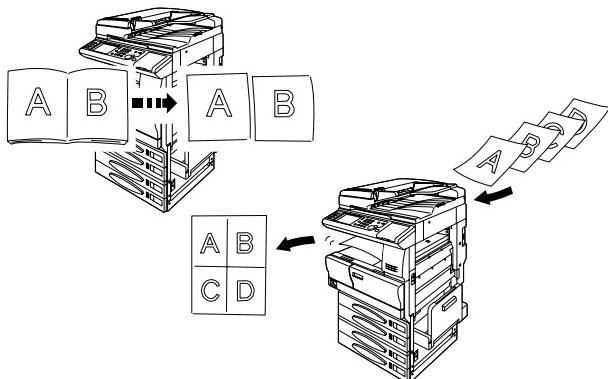

Department Code

With the MFX-2830 you can easily track usage information by user or department. Track print, copy, and fax jobs at the departmental level or at the individual user level. (see page 4-12 for instruction)

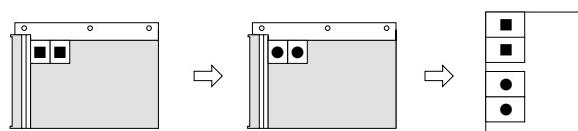

Series/N-in-1(Combine)

Reduce paper consumption by combining multiple documents into a single sheet by using the N-in-1 feature. With series copy, copied book pages can be converted into separate pages. (see page 2-30, 2-44 for instruction)

Card Copy

Need to copy both sides of an ID card, driver's license or check? Select the "Card Copy" mode and quickly copy both sides of a card or check-sized document onto a single page. (see page 2-86 for instruction)

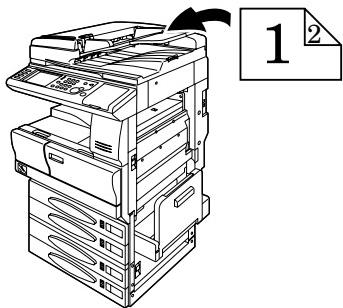

Main Features

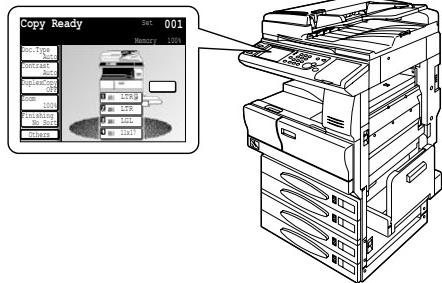

Duplex Scanner

Scan two-sided documents quickly via the single-pass duplex scanner. As opposed to competing scanners, the MFX-2830 can scan and process two-sided documents in one pass, reducing both time requirements and wear on moving parts. (see pages 2-67, 3-130 for instruction)

Soft Keys

Soft Keys allow you one-touch access to important features. The soft keys on the MFX-2830 touch screen are programmable, meaning you can customize them to your preferences. (see page 4-10 for instruction)

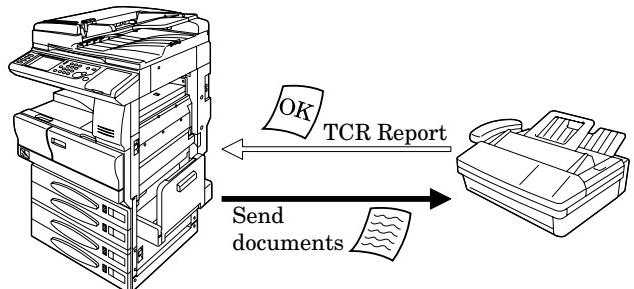

Speed Dialing

Users can program up to 500 frequently dialed fax numbers into the speed-dial directory, allowing for easy one-touch transmission to important contacts. (see page 3-162 for instruction)

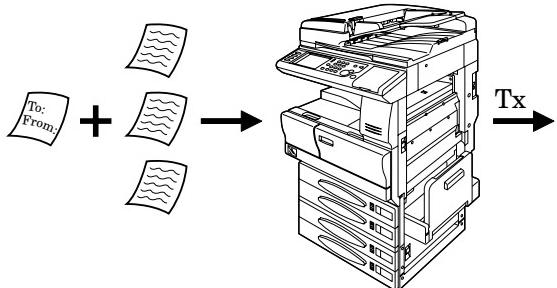

Confirm TCR

Automatically generate a transmission confirmation report to insure that your important fax job successfully reached the remote machine. (see page 3-150 for instruction)

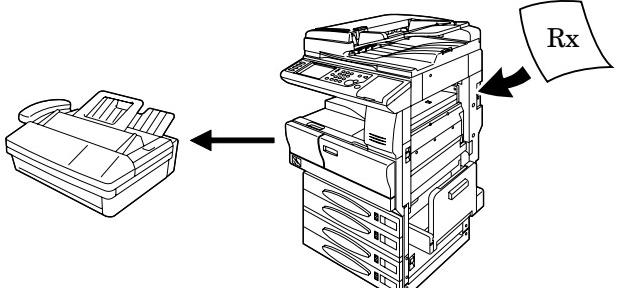

Cover Page

Quickly add a customized cover page to your transmission, including text message and sender's information. (see page 3-76 for instruction)

Fax Forwarding

Out of the office? Forward incoming fax transmissions to any fax location easily by enabling the MFX-2830's fax forwarding feature. (see page 3-80 for instruction)

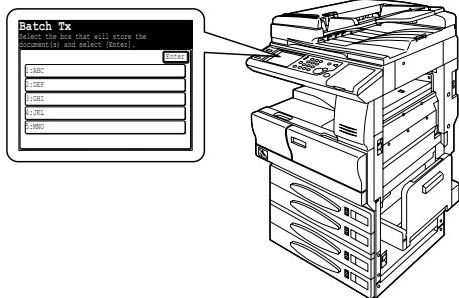

Main Features

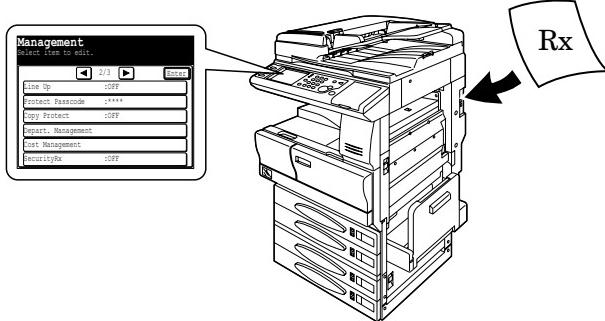

Batch Transmission

Scan documents into batch transmission storage boxes and schedule the transmission time for after hours when the phone rates are lower. (see page 3-64 for instruction)

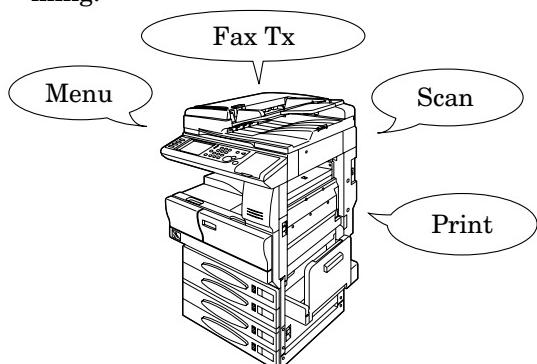

Security Reception

With security reception enabled users can receive fax documents into password protected storage. This ensures that received jobs are viewed by authorized users only. (see page 3-88 for instruction)

QuadAccess

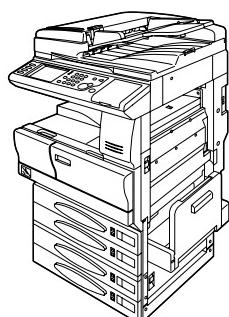

The MFX-2830 boasts a powerful feature called QuadAccess, found only on Muratec equipment. This feature allows your machine to perform a host of functions at once, such as a fax transmission, printing, scanning documents for transmission and menu programming.

Useful options

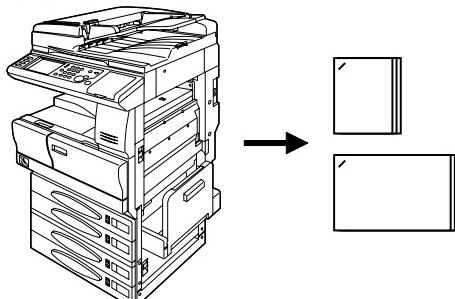

■ OfficeBridge Pro

With the OfficeBridge Pro option activated your MFX-2830 becomes a cost-effective network printer, high-res scanner, PC fax, Internet fax terminal and scan-to email station.

■ Staple Finisher

Forget the days of manual collation and stapling. With the staple finisher your documents will be collated, stapled and stacked, giving your important documents a professional finish.

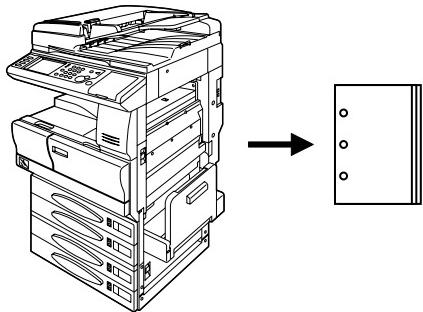

Main Features

Useful options

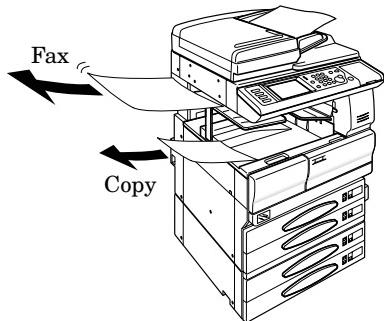

■ Punch Finisher

Maximize your document output options by upgrading to the punch finisher. Quickly generate professional looking documents for insertion in binders, folders and other media.

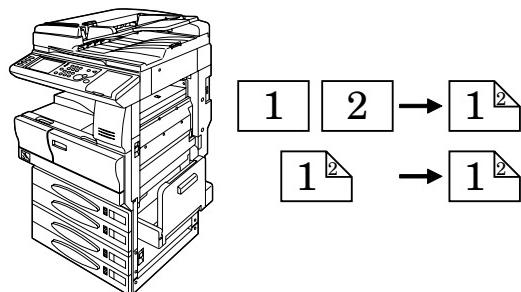

■ 2-Bin Tray

No need to sift through a stack of documents to separate fax and copy jobs. With the 2-Bin tray installed on the MFX-2830 you can select the output tray that will house your various jobs. (see page 4-32 for instruction)

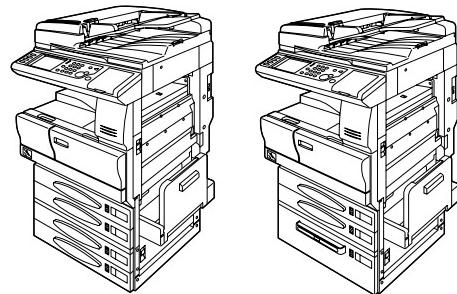

■ Duplex Printer

Reduce paper consumption by converting one-sided originals into two-sided printouts. Also, receive your incoming faxes as two-sided printouts for additional savings. (see page 2-67 for instruction)

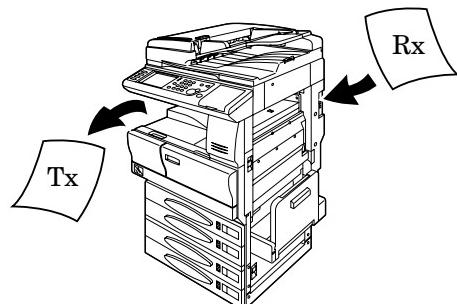

■ Paper Cassettes

The MFX-2830 can be customized to meet your output needs. Whether you print thousands of documents per week on letter, or you need to print on various media, the MFX-2830 is flexible enough to match your printing requirements.

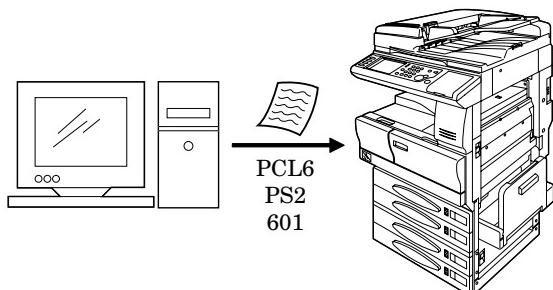

■ Dual Line Option

High-volume faxing is not a problem with the MFX-2830. By adding a second 33.6 Kbps modem you can effectively reduce time spent faxing by sending and receiving faxes simultaneously.

■ Printing Possibilities

The MFX-2830 comes standard with Windows GDI printing via the USB hub. But if you require more advanced printing power, easily upgrade to available PCL5e/6.

How to read this manual

Title → **FAX Chapter2**  **Preventing Received Documents from Being Read by Others (Security Reception)**

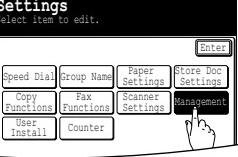

This enables all documents received after the security reception start time to be stored in memory without being printed out. This function is useful to store all documents received in memory at night, for example, when there is no one in the office. You can then print out received faxes later.

Operating tips → **Operating tips**

- Set the protect passcode in advance. (see page 4-36)
- When the protect passcode is deactivated, security reception is also deactivated.
- When security reception is set to ON, it will start at the specified time every day.
- If any documents are received during security reception, "Security Rx document exists" is displayed and the Memory Receive lamp illuminates. Once a document is printed out, the machine automatically returns to normal reception.

Section → **Security reception settings** Default: OFF

Operating steps → **1 Press SETTING.** 

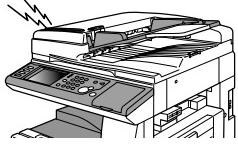

Keys on control panel → **2 Press [Management].** 

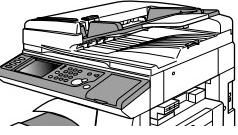

Touch screen display → **Note** 
The machine can be set to ring even if a handset is connected.

Note You can pick up the handset while the machine is ringing to talk on the phone.

Reference 

- To make the machine ring, you need to make the settings for the handset or the fax ring-er on the machine. (see page 4-35)
- The number of rings can be changed from 1 to 10. (see page 3-196)

1 Your machine rings. 

2 Fax reception will begin. 

Reference Describes the page number referred to for each function.

In this case → **In this case** 

To change the number of rings...
The number of rings can be set from 1 to 10. You can make it easier to answer the phone by increasing the number of rings to extend the time until the fax answers the phone. For the details of setting method, refer to page 3-196.

Regulatory information

Customer information

United States of America

This equipment complies with Part 68 of FCC rules and the requirements adopted by the ACTA. On the rear panel of this equipment is a label that contains, among other information, a product identifier in the format US:DKUFA02B001J. If required, this number must be provided to the phone company.

The REN is used to determine the number of devices that may be connected to a phone line. Excessive RENs on a phone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local phone company. The REN for this product is part of the product identifier that has the format US:DKUFA02B001J. The digits represented by 02 are the REN without a decimal point.

Your fax is designed for use on standard-device phone lines. The fax connects to the phone line with a standard line called the USOC RJ-11C.

A plug and jack used to connect this equipment to the premises wiring and phone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A compliant phone cord and modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant. See installation instructions for details.

If this equipment MFX-2830 causes harm to the phone network, the phone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the phone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

The phone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens the phone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

If trouble is experienced with this equipment MFX-2830, see operating instructions for details. For further repair or warranty information, please contact Muratec Customer Support Center at 800-347-3296 (from the U.S. only). If the equipment is causing harm to the phone network, the phone company may request that you disconnect the equipment until the problem is resolved.

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

If your home has specially wired alarm equipment connected to the phone line, ensure the installation of this MFX-2830 does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your phone company or a qualified installer.

This equipment is hearing aid compatible.

When programming emergency numbers and/or making test calls to emergency numbers:

1) Remain on the line and briefly explain to the dispatcher the reason for the call.

2) Perform such activities in the off-peak hours, such as early morning or late evenings.

To protect your product against power surges, we recommend the use of a power protection device. (Surge arrester)

The Phone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device, including FAX machines, to send any message unless such message clearly contains in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it is sent and an identification of the business or other entity, or other individual sending the message and the phone number of the sending machine or such business, other entity, or individual. (The phone number provided may not be a 900 number or any other number for which charges exceed local or long-distance transmission charges.)

In order to program this information into your FAX machine, you should complete the following steps: *For instructions on programing this information (the "TTI") into your fax machine, see page 1-56.*

FCC Part 15

This equipment has been tested and found to comply with the limits for a Class A digital devices, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada

NOTICE: This equipment meets the applicable Industry Canada Terminal Equipment Technical Specifications.

NOTICE: The Ringer Equivalence Number (REN) for this terminal equipment is 02. The REN assigned to each terminal equipment provides an indication of the maximum number of terminals allowed to be connected to a phone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed five.

Canadian ICES-003

This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Limited warranty

This warranty is made by Muratec America, Inc. (hereafter referred to as "Muratec"). This warranty is valid only on Muratec products purchased and used in the United States of America. This warranty applies to the product only while owned and used by the original purchaser ("Customer"). If ownership of the product is transferred, this warranty terminates. This warranty does not apply to any product in use for rental purposes.

This Muratec product is warranted against defects in material and workmanship for ninety (90) days commencing the date of original Customer purchase. If the product is defective in material and/or workmanship (normal wear and tear excepted) during the warranty period, Muratec or its authorized representative will, during Muratec's established service availability hours, make necessary adjustments and repairs, including, at Muratec's option, installation of replacement parts. Muratec's service availability hours are 8:30 AM to 5:00 PM (Central time) Monday through Friday, excluding Muratec-recognized holidays. Muratec will complete the necessary adjustments and repairs within a reasonable time period, as dictated by the nature of the problem and by Muratec's service schedule. Replacement parts may have been used and/or reconditioned. Parts that have been replaced will remain the property of Muratec. This warranty is subject to the OBLIGATIONS and EXCLUSIONS set forth.

Obligations

1. This warranty will be honored only on presentation of the original dated authorized Muratec bill of sale or Muratec dealer bill of sale or sales slip to an authorized Muratec service representative or service center. For the name of your authorized service center, contact Muratec (from the United States, call 1-469-429-3350; from Canada, check your in-box materials for the number to call).
2. During the warranty period, the Customer must notify Muratec by phone of any defective product material and/or workmanship.
3. Transportation (including prepayment of freight and insurance charges) of the product to and from an authorized service center, designated by Muratec, is the responsibility of the Customer.
4. If Muratec provides maintenance or responds to a call which is outside the scope of this warranty, such maintenance shall be billed to the Customer at Muratec's then-current rates for maintenance and parts and shall be due and payable in full upon receipt of invoice.

Exclusions

1. This warranty shall not cover a product with missing or altered original identification marks.
2. This warranty applies only to products that the purchaser has properly installed, adjusted and operated in accordance with the instructions set forth in or provided with product literature. This warranty does not apply to any product which has been subjected to tampering, alteration, misuse, abuse, neglect, improper installation or transportation damage. Nor does it apply to costs for any service requested for demonstration or to confirm proper operation of this product.
3. The warranty shall not apply to adjustments, repairs or replacements necessitated by any cause beyond the control of Muratec (whether foreseeable or not) including, but not limited to, any malfunction, defects or failure caused by or resulting from any of the following: improper unpacking or installation, unauthorized service or parts, or improper maintenance or cleaning, modification or repair by the Customer, accident (including, without limitation, unavoidable accidents), fire, flood or other Acts of God, improper phone or electrical power or surges thereof, interconnection with or use of non-compatible equipment or supplies (including paper), or placement of the product in an area which does not conform to Muratec space, electrical and/or environmental requirements.
4. Muratec will not be required to make adjustments, repairs or replacements if the product is installed or used at a location deemed by Muratec to be hazardous to health or safety, or if Muratec is not provided with free and reasonable access to the product and a phone during service availability hours, or if the product location is not accessible by an authorized Muratec service vehicle.

EXCEPT AS EXPRESSLY SET FORTH ABOVE, AND EXCEPT TO THE EXTENT PROHIBITED BY APPLICABLE LAW, MURATEC MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED (INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, AND ANY WARRANTY ARISING FROM COURSE OF DEALING OR USAGE OF TRADE), AND MURATEC EXPRESSLY DISCLAIMS ALL WARRANTIES NOT STATED HEREIN. IN THE EVENT THE PRODUCT IS NOT FREE FROM DEFECTS AS WARRANTED ABOVE, THE CUSTOMER'S SOLE REMEDY SHALL BE REPAIR OR REPLACEMENT AS PROVIDED ABOVE. UNDER NO CIRCUMSTANCES SHALL MURATEC BE LIABLE TO THE CUSTOMER, OR TO ANY USER, FOR ANY DAMAGES, INCLUDING ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES, EXPENSES, LOST PROFITS, LOST SAVINGS OR ANY OTHER DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE MURATEC PRODUCT, EVEN IF MURATEC OR ITS REPRESENTATIVES HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Some States do not allow the exclusion or limitation of incidental or consequential damages, and some States do not allow limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from State to State.

Safety information

Laser Safety

This is a digital machine which operates by means of a laser. There is no possibility of danger from the laser, provided the machine is operated according to the instructions in this manual.

Since radiation emitted by the laser is completely confined within protective housing, the laser beam cannot escape from the machine during any phase of user operation.

This machine is certified as a Class 1 laser product. This means the machine does not produce hazardous laser radiation.

Internal Laser Radiation

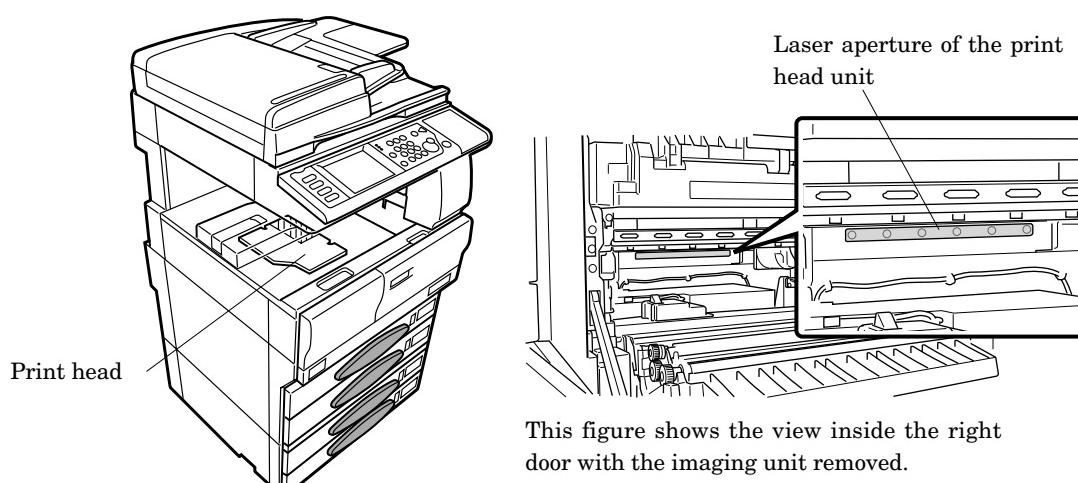

Maximum Average Radiant Power: 25.3 (μW) at the laser aperture of the print head unit.

Wavelength: 770-795 nm

This product employs a Class IIIb Laser Diode that emits an invisible laser beam. The Laser Diode and Scanning Polygon Mirror are incorporated in the print head unit.

The print head unit is NOT A FIELD SERVICE ITEM.

Therefore, the print head unit should not be opened under any circumstances.

For the United States

CDRH regulation

This machine is certified as a Class 1 Laser product under the Radiation Performance Standard according to the Food, Drug and Cosmetic Act of 1990.

Compliance is mandatory for Laser products marketed in the United States and is reported to the Center for Devices and Radiological Health (CDRH) of the U.S. Food and Drug Administration of the U. S. Department of Health and Human Services (DHHS). This means that the device does not produce hazardous laser radiation.

The label shown below indicates compliance with the CDRH regulations and must be attached to laser products marketed in the United States.

⚠ CAUTION

Use of controls, adjustments or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

This is a semiconductor laser. The maximum power of the laser diode is 5mW and the wavelength is 770-795nm.

Laser Safety Label

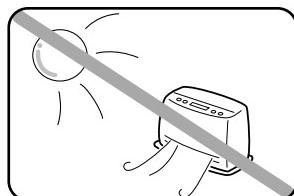

A laser safety label is attached to the outside of the machine as shown below.

Before using your Muratec machine

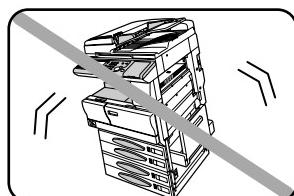

Where to set up your machine

Follow these guidelines when setting up your machine:

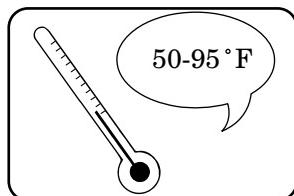

Away from direct sunlight

To avoid overheating, set up your machine away from direct sunlight or a heater.

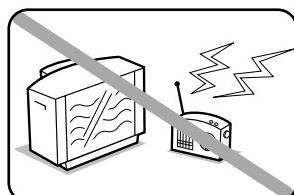

Level, and vibration-free

To avoid an injury or damage to the machine, set the machine up in a level, vibration-free location.

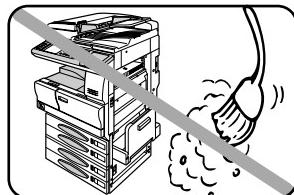

Avoid extreme high/low temperature

Use your machine within the temperature range of 50°F to 95°F (10°C to 35°C).

Away from a television or radio

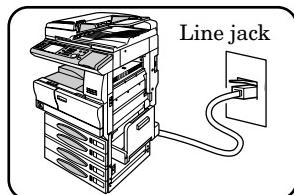

Many appliances and office equipment, including televisions, radios, copy machines, air conditioners and computers, can generate electronic noise that can interfere with the operation of your machine.

Clean

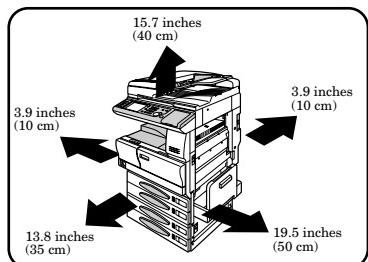

Dust buildup can damage your machine.

Periodically clean your machine as described in the operating instructions. Do not use a dust cover, which can cause severe overheating.

Near a phone jack

Your machine uses a standard (modular) phone jack, also known as an RJ-11.

Space around the machine

To ensure proper ventilation and easy operation, set up the machine in an area that meets the minimum requirements for clearance as illustrated below.

Power requirements

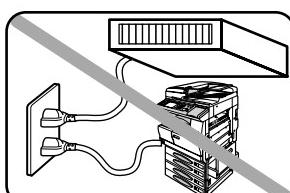

Plug in the power cord

Plug the power cord carefully and completely into a wall outlet. Do not leave any portion of the electrical cord's metal plugs exposed. Doing so could cause a fire and increases the risk of electrical shock.

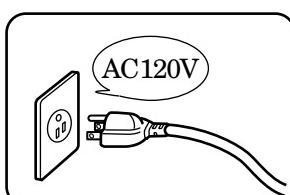

Do not share an extension cord connector with other plugs

It can cause electrical shock.

Do not share an outlet with a large appliance

High-consumption appliances such as a refrigerator or air conditioner can cause "draw-downs" which could damage your machine.

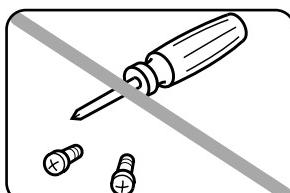

120 VAC outlet

Use a standard three-pronged 120 V electrical outlet to power your machine. Using any other electrical outlet will damage to your machine.

For domestic use only

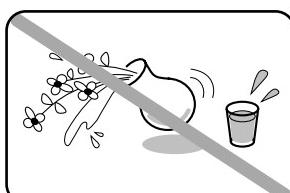

Never use your machine outside the country in which you purchased it. Doing so may violate telecommunication and safety regulations of that country, and variations in electrical and phone standards can cause poor performance and damage your machine.

General Precautions

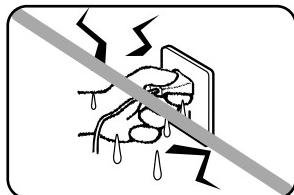

⚠ Never disassemble your machine!

Disassembling your machine can cause serious injury to you and damage to your machine. If service is required, call your authorized Muratec dealer.

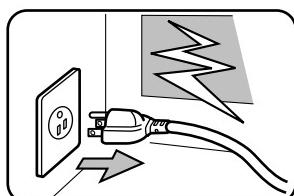

Keep away from liquids

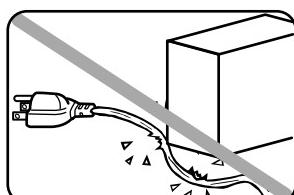

Keep liquids and metal pins or other objects away from your machine. If something falls into the machine, remove the plug from the outlet and call your authorized Muratec dealer.

⚠Never handle your machine or power cord with wet hands
Never touch your machine or power cord if your hands are wet.

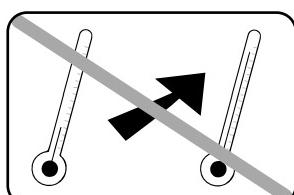

During electrical storms, disconnect the plug from the outlet
Electrical storms can cause electrical shock or damage the machine.

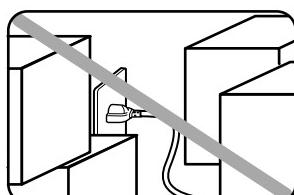

Do not put furniture or equipment on the power cord

Do not put anything on or over the electrical power cord, and do not route the power cord under rugs or carpets. Doing so can damage the power cord or fax, and can cause fire or electrical shock.

Avoid temperature fluctuations

Sudden changes in temperature can cause damaging condensation to form inside your machine.

Allow clearance around the outlet

Don't stack boxes or furniture around the outlet.

Use supplies manufactured specifically for Muratec machines

Using toner bottles and other supplies that are not manufactured specifically for Muratec machines may affect the operation of your unit.

Storing and handling the toner bottle

To avoid damage to your machine and to assure the best performance possible, follow these guidelines when storing and handling toner bottles:

Store the toner bottle

Store toner bottles at a constant temperature within a range of 50°F to 95°F (10°C to 35°C). Do not store bottles in locations subject to extreme fluctuation of temperature and humidity.

Do not stand the bottle on its end and do not store it upsidedown.

Do not open the protective bag of the bottle until you are ready to install the bottle.

Do not store bottles in areas of:

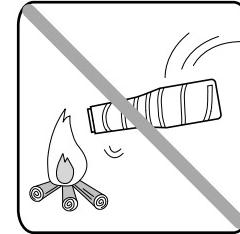

- Direct sunlight
- Dusty conditions
- Near floppy disks or other computer media, computer screens, or any other materials sensitive to magnetic fields.

⚠ Do not burn toner bottles!

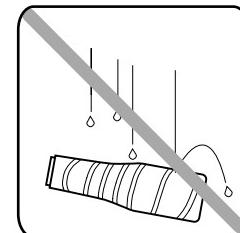

The toner powder is extremely flammable. Exposure to flame can cause the toner bottles to burn or explode, causing serious injury.

Be careful not to get the toner powder in your eyes.

If the toner powder gets in your eyes, immediately flush your eyes with water and seek medical assistance.

Keep bottles away from water and oil.

Do not expose bottles to direct sunlight.

Do not expose toner bottles to static or other electrical shock.

Symbol and terms (Operating tips)

In this manual, the following symbols and terms are used, please familiarize yourself with these.

⚠ CAUTION This symbol indicates how to avoid personal injury.

Important This describes conditions or incorrect operations that could cause damage to your machine.

Note Describes the additional operating notes for each step.

Reference Describes the page number referred to for each function.

Operating tips Explains the items you should know before operation.

In this case Describes the useful information for each function.

[] Keys that appear at the lower area of the touch screen.

Part Names and Functions

Equipment configuration

No.	Name	Function
1	Automatic Document Feeder (ADF)	This scans multi-page documents one page at a time. For a duplex document, the document's front and back are each scanned once. Hereinafter this is stated as "ADF" in this manual.
2	2-Cassette Cabinet	This is a two-level paper cassette. Each paper cassette holds up to 500 sheets of paper.
3	1-Cassette Cabinet	This is a one-level paper cassette. It holds up to 500 sheets of paper. The second shelf is a drawer that allows paper to be added while the machine is operating.
4	Large Capacity Cassette	This is a large capacity paper supply cassette that can hold a maximum of 2,500 sheets.
5	Cabinet	This cabinet was developed to make the machine easier to use. There is space for storing paper and consumables.
6	Duplex Unit	Equipping the machine with this unit makes double-sided printing possible.
7	Switchback Unit	This is used to reverse or sort the paper. It is required when the machine is equipped with the duplex unit or the 2-Bin tray..
8	2-Bin Tray	This sorts the output paper into different trays when copying, faxing, etc.
9	Handset	Used for voice communication.
10	32MB Memory Expansion Kit	This increases the memory capacity of the machine.
11	Second phone line module	This is used to increase the number of communication lines to perform Super G3 transmission to two places simultaneously.
12	Printer Kit (OP-500)	This allows the machine to be used as a fine image printer by application software that supports Windows.
13	Network Printer Kit (NP-500)	This connects the machine to a network to allow it to be used as a network printer.
14	OfficeBridge Pro (OB-500)	This is an all-in-one package that combines a variety of functions, such as PC-FAX, internet fax, network printing and network scanning.
15	Finisher	This is used to sort multiple copies into their respective stacks where they can be stapled together, etc.
16	Punch Kit	Equipping the Finisher with this makes it possible to punch holes in the copies.

*1 to 5 are component parts, provided as a set at the time of purchase. 6 to 18 are optional parts.

Main unit part names and functions

■ Main unit

No.	Name	Function
1	Right Cover	This is opened to remove jammed paper or to change the drum cartridge.
2	Right Cover Release Lever (C1)	Pull up on this to open the right cover.
3	Right Lower Cover	This is opened to remove jammed paper.
4	Bypass Tray	This is used to copy or print special or custom paper, such as postcards and envelopes. (see page 1-26)
5	Extension Tray	This is extended when loading large-size paper.
6	Paper Loading Guide	This is adjusted to match the width of the paper to prevent skewing.
7	Slide Plate	This is pulled when the paper in the bypass tray jams.
8	Slide Plate Knob (C3)	This controls the movement of the slide plate.
9	Right Lower Cover Release Lever (C2)	Pull up on this to open the right lower cover.
10	Paper Level Indication Window	The red shown in this area increases as the level of the paper in the paper tray decreases.
11	Front Cover (B)	This is opened to replace the toner bottle. (see page 5-15)
12	Control Panel	This is where the keys and touch screen required for operation are grouped.
13	ADF Cover	This is opened when a document jams or to when cleaning the scan area.
14	ADF Cover Release Lever (A1)	Pull up on this to open the document cover.
15	Document Guide	This supports the document so that it feeds straight.
16	Document Tray	This holds the document in the ADF.
17	Document Output Tray	This catches originals after they have been scanned.
18	Document Output Extension Tray	This is extended when catching long document.
19	USB Port	The machine can be used as a printer by connecting it to a computer via a USB cable.

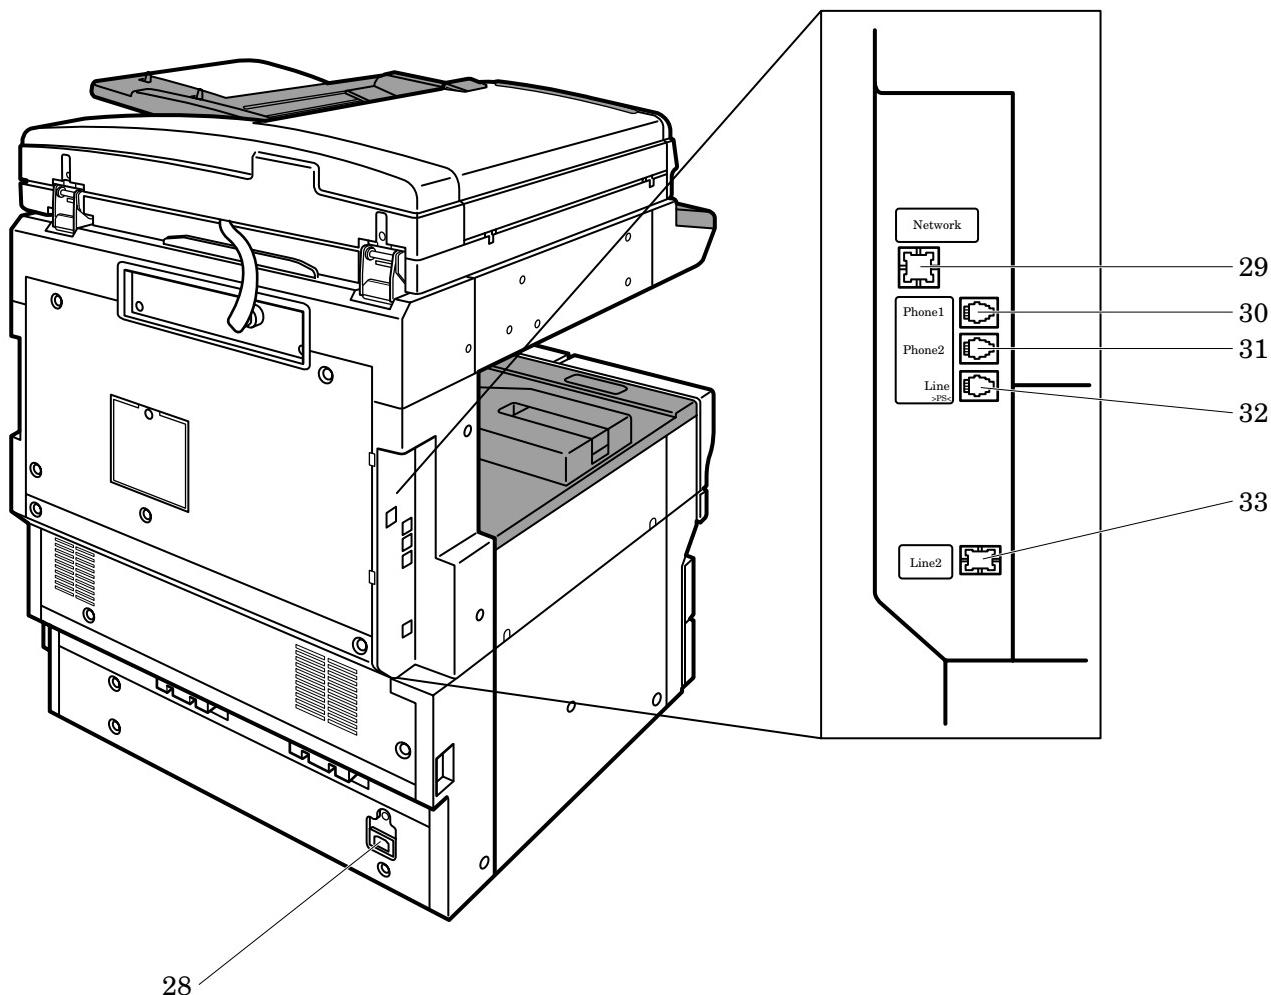

No.	Name	Function
20	Platen Cover	This holds down the document.
21	Document Glass	Align the document to be copied or transmitted to the loading guide on the back of the left side.
22	Counter	This counts the total number of sheets printed.
23	Toner Hopper	This is pulled out to change the toner bottle.
24	Power Switch	This switch is used to turn the machine on and off. Normally, leave the power on.
25	Paper Output Tray	This catches the copied or printed paper with the printed side down.
26	Stopper	This keeps the printed paper from falling. It is used when the optional 2-Bin tray is installed.
27	Handset Mounting Position	This is the area where the optional handset can be mounted.

Control panel part names and functions

1. Touch Screen Contrast Volume

This adjusts the brightness of the touch screen display.

2. Mode Key

Press this to change the displayed screen to the copy, fax, scanner, or printer mode. The selected key illuminates.

3. Touch Screen Display

Directly touch the screen to operate.

4. SETTING

Press this to call up the functions.

5. LIST

Press this to print the various lists.

6. MACRO

Press this to run, edit or delete macros. (see page 4-2)

7. ALARM Lamp

This illuminates when an error occurs. (see page 5-24)

8. COMMUNICATING Lamp

This illuminates when communicating.

9. MEMORY RECEIVE Lamp

This illuminates when the paper has run out and the received data is being placed into memory.

10. RESET

Press this to stop the operation or to delete and initialize the settings.

11. VOICE GUIDANCE

Press this to hear how to remove a paper jam or an explanation of a function. This key illuminates when voice guidance is being given and when it is possible to hear guidance. (see page 1-58)

12. Numeric Keypad

Press these keys to enter numbers when dialing a phone number, specifying how many copies to make, etc.

13. FAX CANCEL/JOB CONFIRM

This is used to stop or check the transmission.

14. INTERRUPT

Press this when copying or printing a received fax to give priority to another copy job. This key illuminates when pressed.

15. START

Press this to start the job procedure.

16. STOP

Press this to stop the machine's operation.

17. ENERGY SAVE

Press this to put the machine into Energy Save Mode in order to reduce power consumption. (see page 1-25)

18. One-Touch Key

Press to send a document instantly. The one-touch key corresponds to the numbers registered in speed-dial numbers 001 to 048.

Power Switch and ENERGY SAVE

The machine has two power-related switches; the power switch and **ENERGY SAVE**.

Power switch

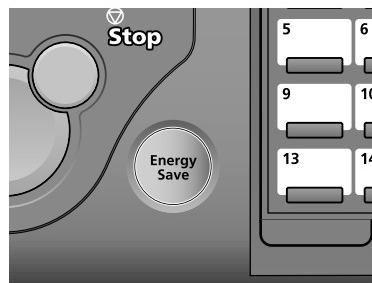

This is turned on (I) the first time you use the machine. Normally, this switch is left on. Turn off (O) the machine if you need to physically move it or it will be idle for an extended period of time.

*Faxes cannot be received when the power switch is turned off.

ENERGY SAVE and energy save mode

When the machine has been idle for a predetermined amount of time, the Energy Save mode will activate to conserve power. The Energy Save mode consists of the “Low Power Mode” and the “Sleep Mode”. **ENERGY SAVE** is used to activate the Energy Save mode.

Low Power Mode

- When **ENERGY SAVE** is pressed, the touch screen and the various lamps are turned off and the printer enters the rest state (Low Power Mode) to conserve power.
- If the machine is not used for 15 min, it will automatically enter the Low Power Mode. This value can be changed in Low Power Mode setting displayed after pressing [**Energy Save Mode**] in [**Management**]. (see page 4-36)
- ENERGY SAVE** illuminates in green when the machine is in the Low Power Mode.
- When any key or the touch screen is pressed while in the Low Power Mode, the machine will “wake-up” and return to the normal standby state.

Sleep Mode

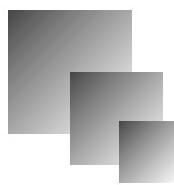

- To put the machine in Sleep mode, hold down **ENERGY SAVE** for 3 seconds.
- When the machine remains in the Low Power Mode for 1 hour, it will automatically enter the Sleep Mode. This value can be changed in the [**Sleep Mode Setting**] displayed after pressing [**Energy Save Mode**] in [**Management**]. (see page 4-36)
- When in Sleep Mode, all power is off, but the documents scanned into memory can be transmitted and received documents can be printed.

The number of reception ring becomes more than the set number in Sleep Mode.

- ENERGY SAVE** illuminates in red when the machine is in the Sleep Mode.
- When **ENERGY SAVE** is pressed in the Sleep Mode, the machine returns to the normal standby state.
- The time to cancel or start the Energy Save Mode can be set. (For Energy Save Mode Time Setting, see page 4-36.)

Note

The Energy Save Mode will not activate if there is a print error, such as an out-of-paper status or paper jam.

Loading Paper

Acceptable paper sizes

- Using the following paper is recommended to effectively utilize the performance of this product.
- Specified paper is paper recommended by Muratec.
- When printing on commonly available paper, refer to the following table and use paper that meets the specifications.

■ Paper cassette

	Paper size	Paper weight	Paper capacity
From Cassette 1 to Cassette 4 *Cassettes 1 and 2 are main unit cassettes, Cassette 3 is 1-level paper unit or the upper level of the 2-level paper unit, and Cassette 4 is the lower level of the 2-level paper unit. ■ Duplex printing

Paper size-Paper type
Regular size paper (plain paper only)
11"×17", Legal, Letter <input checked="" type="checkbox"/>

■ How to store paper

Acceptable paper, if improperly stored, could cause frequent paper jams, reduced print quality and cause equipment malfunction. Store the paper in a location that meets the following conditions.

- Store in a place with low humidity.
- After opening the wrapping, wrap the unused paper in the same wrapper and store it in the cabinet or a location with low humidity.
- Store the paper in a flat location - do not stand it on end.
- Avoid wrinkles, folding, curling, etc.
- Store in a place out of direct sunlight.

Unacceptable paper

Do not use the following papers. Using them could cause poor printing quality, paper jams, or equipment malfunction.

- OHP film that has already been printed on once
*Even OHP film that was output without printing on it cannot be reused.
- Paper printed on by a thermal printer or an inkjet printer
- Paper that is too thick or too thin
- Paper that is creased, folded, wrinkled, or torn
- Paper for which the wrapping has been open for an extended period of time
- Paper that has absorbed moisture
- Paper with holes for binders or paper with perforated lines
- Paper with surfaces that are too smooth, too rough, or not uniform
- Paper with processed surfaces, such as carbon paper, thermal paper, or pressure sensitive paper
- Paper subject to processing such as gilding or embossing
- Paper of different sizes mixed together
- Irregularly shaped paper (paper that is not rectangular)
- Paper that is fastened by glue, staples, paper clips, etc.
- Paper with labels stuck to it
- Paper with ribbons, hooks, buttons, etc. attached to it
- Paper that is curled or waved
- Art paper, coated paper, coated paper for inkjet printers

Appendix

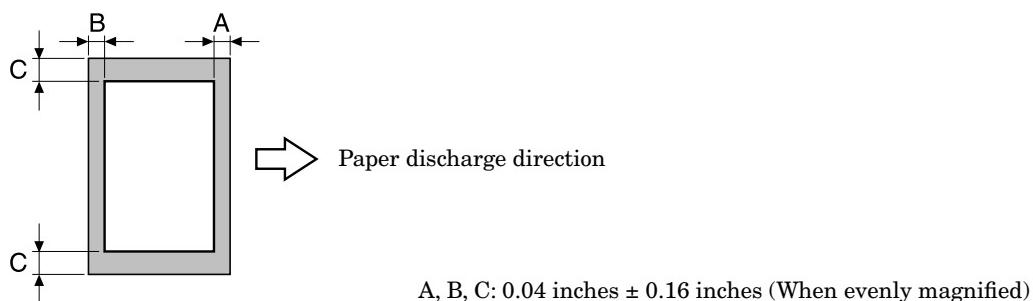

Printing area

The area image shown below cannot be printed on.

Area A that is 0.04 inches \pm 0.16 inches (when enlarged) from the front edge of the paper.

Area B that is 0.04 inches \pm 0.16 inches (when enlarged) from the back edge of the paper.

Area C that is 0.04 inches \pm 0.16 inches (when enlarged) from the edge of the paper.

Reference

The blank border around the paper can be changed. (see page 4-37)

Automatic paper supply function

If the paper from the currently selected paper supply tray runs out during printing, the machine automatically switches to the appropriate cassette and continues printing.

If the large capacity cassette is installed, continuous printing or copying can be performed for a maximum of 3,500 sheets. (For Letter paper)

■ Paper supply changing order

If the Automatic paper supply function is operating, the paper cassettes and trays are selected with the following priority.

1st Paper Cassette \Rightarrow 2nd Paper Cassette \Rightarrow 3rd Paper Cassette \Rightarrow 4th Paper Cassette \Rightarrow Bypass Tray

Reference

If the bypass tray is used by Automatic paper supply, the machine must be set to "Select Print Cassette". (see page 4-31)

Note

If special paper, such as OHP film or label sheets, is loaded in the bypass tray, Automatic paper supply could be triggered causing the wrong paper to be supplied. In this case, it is recommended that the paper type should be set to other than plain paper in the bypass paper setting. (see page 1-37)

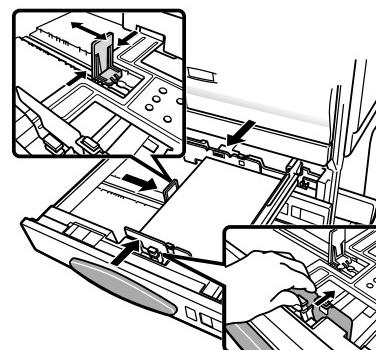

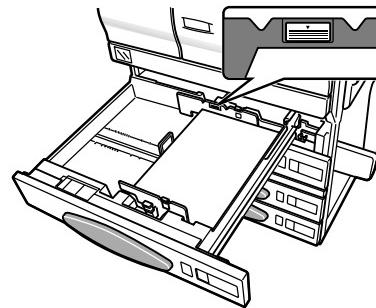

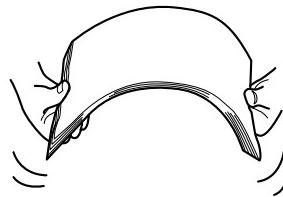

How to load paper

Strictly observe the following precautions when loading the paper.

- If the paper is curled, flatten it out before placing it in the cassette.

- Load the paper so that it does not go higher than the ▼ mark or exceed the specified number of sheets.

- Align the guide plate firmly against the edge of the paper.

Note

It is recommended that all of the paper in the cassette or tray be used up before new paper is added.

- When loading the paper, remove any paper remaining in the paper cassette or tray, combine it with the new paper, tap the paper flush, and then load it.

Loading paper in paper cassette

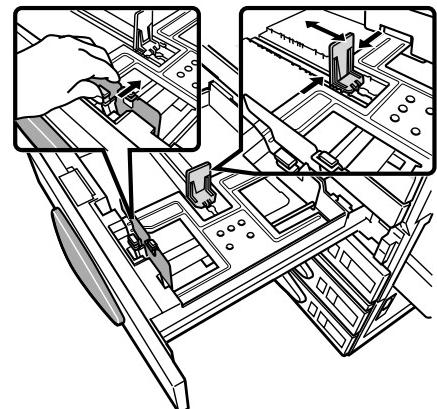

Use the following procedure to load the paper into the main unit cassette or 1-cassette cabinet or 2-cassette cabinet.

Note

Set the guide plate squarely in the groove.

1 Pull out the paper cassette to be loaded.

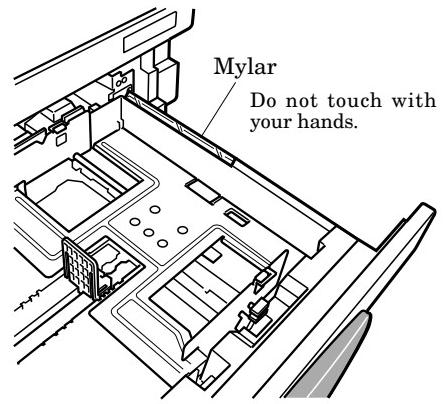

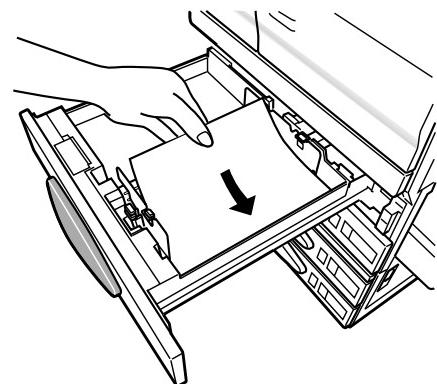

Slide the guide plate to align it to the proper paper size.

Note

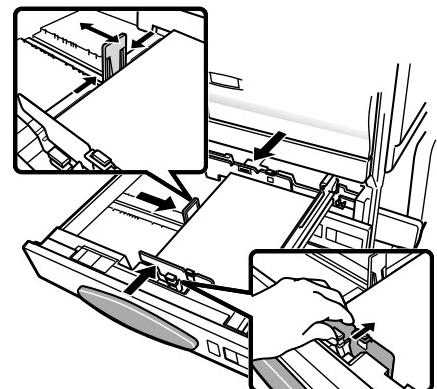

Do not touch the Mylar with your hands.

2 Load the paper with the side to be printed on (side facing up when the wrapping was opened) facing up.

3 Again slide the guide plate to align it to the paper size.

4 Close the paper cassette.

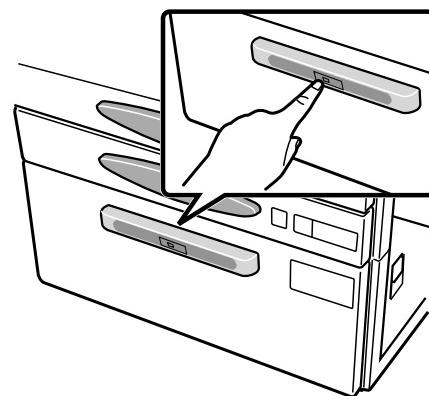

Loading paper into large capacity cassette

Use the following procedure to load paper into the large capacity cassette.

Note

If the power is off, the cabinet cannot be opened.

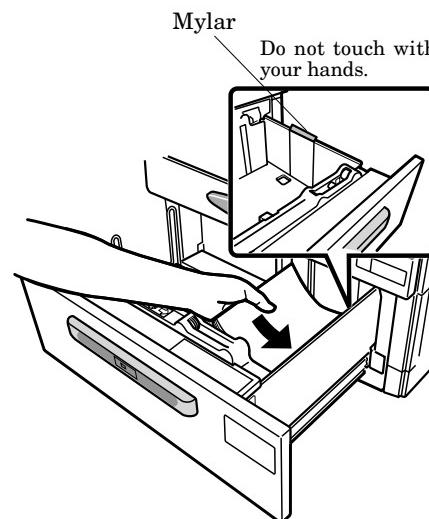

- 1 Press the Drawer release button.

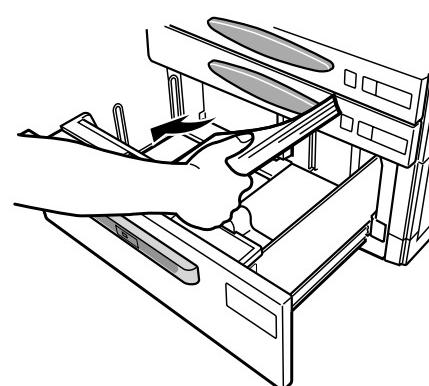

Note

Do not touch the Mylar with your hands.

- 2 Load the paper with the side to be printed on (side facing up when the wrapping was opened) facing up, and load it into the right side of the paper supply cabinet.

- 3 Load the paper with the side to be printed on (side facing up when the wrapping was opened) facing up, and load it into the left side of the paper supply cabinet.

- 4 Close the paper cassette.

Loading paper into bypass tray

Use the bypass tray to print on plain paper, postcards, envelopes, OHP film and label sheets. The loaded paper will be printed on the downward side.

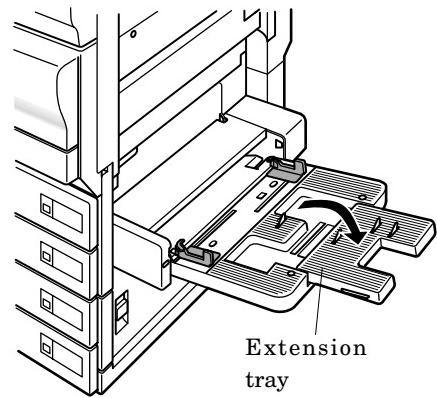

Reference

- When loading anything other than plain paper, the paper type must be set. (see page 1-38)
- When loading custom size paper, the paper size must be registered. (see page 1-37)

1 Open the bypass tray.

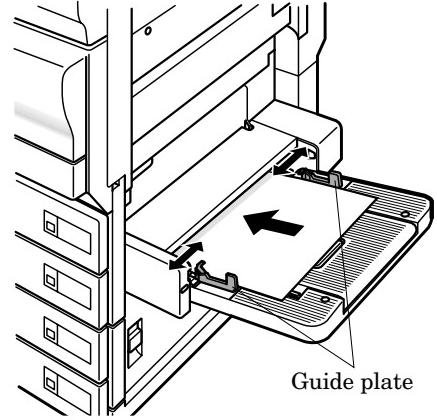

- When loading paper that is larger than the bypass tray, open the extension tray.

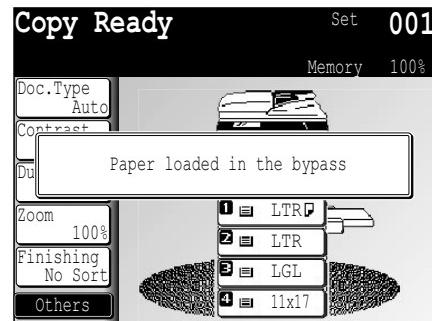

Note

- Load the paper so that it does not go higher than the ▼ mark.
- Align the guide plate firmly against the edge of the paper.

- ### 2 Align the guide plate to the paper size, face the printing surface downward, and load the paper by inserting its edge all the way to the back.

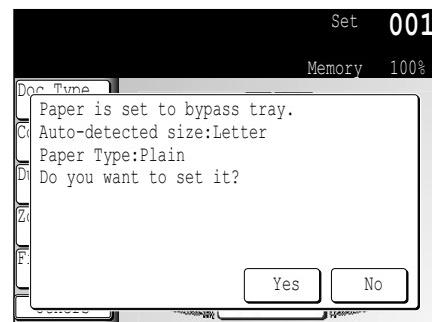

- 3 The bypass tray is automatically selected when paper is loaded in it.

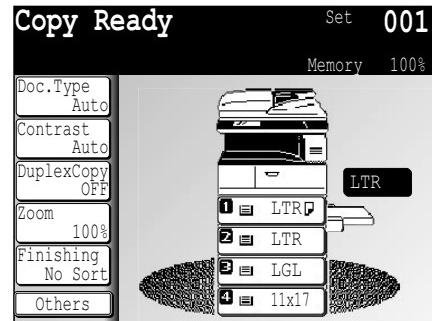

■ When the paper size is registered (see page 1-37)

- (1) When a paper size that differs from the registered paper size (see page 1-37) is loaded, the message at right is displayed.
- (2) To change the paper size to the automatically detected size, press [Yes].

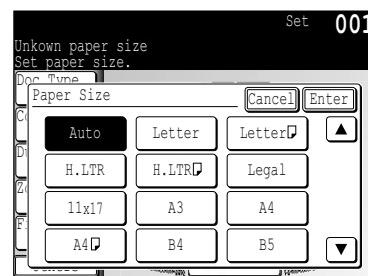

- 4 The auto-detected paper size is displayed.

Note

When the size of the paper loaded in the bypass tray is not automatically detected, the message at right is displayed.
Select the paper size and press [Enter].

How to load paper into bypass tray by paper type

Reference

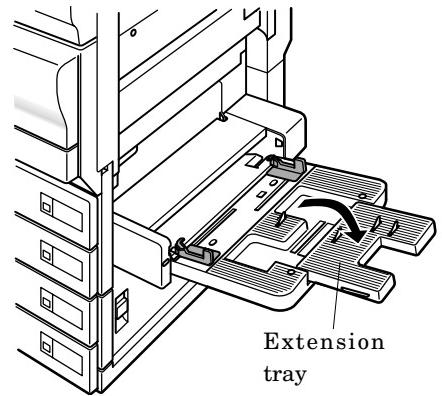

When loading anything other than plain paper, the paper type must be set. (see page 1-38)

■ For plain paper

- 1 Open the bypass tray.

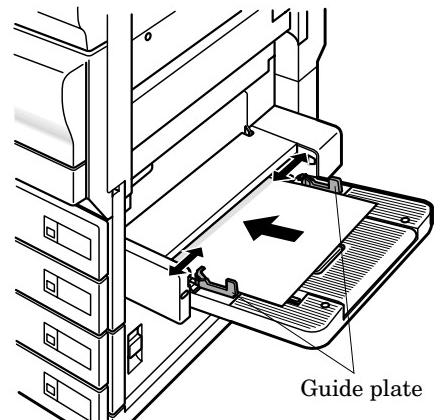

- When loading paper that is larger than the bypass tray, open the extension tray.

Note

- Load the paper so that it does not go higher than the ▼ mark. (Up to Approx. 150 sheets)
- Align the guide plate firmly against the edge of the paper.

- 2 Align the guide plate to the paper size and load the paper by inserting its edge all the way to the back.

■ For envelopes

Note

- When loading envelopes, push out the air in the envelopes and firmly press down the flaps.
- If air remains in the envelopes or the flaps stick up, the envelopes could become wrinkled or jammed.
- Do not load more than 10 envelopes at a time.

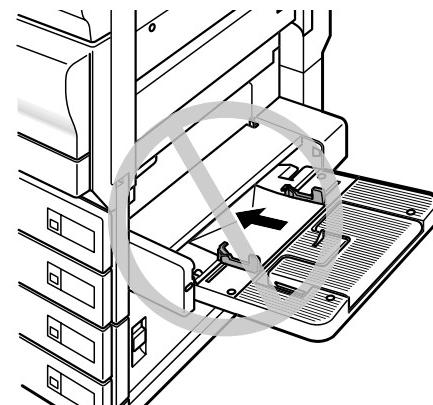

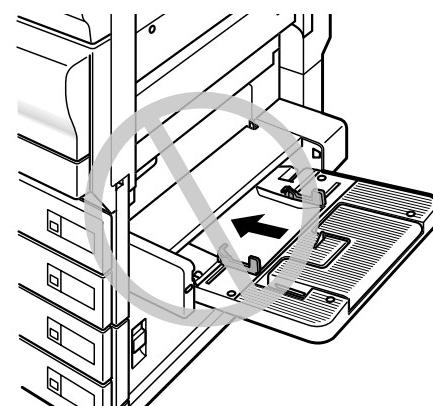

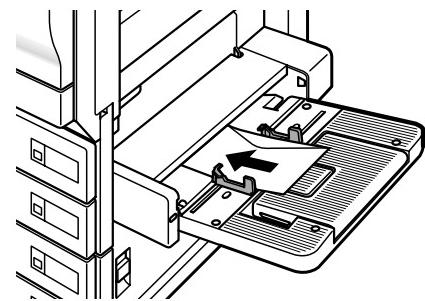

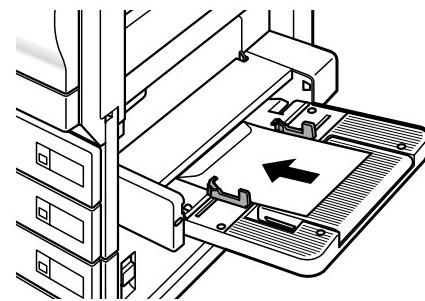

Reference

After loading the paper, set the paper type of the bypass paper setting to **[Env/Post]**. (see page 1-38)

Note

- Do not load the envelopes in the direction.
- Do not load the envelopes with the flaps facing down.

When loading envelopes, load them with the flaps facing up as shown in the illustration.

Note

Do not load more than 50 sheets at a time.

■ For OHP film

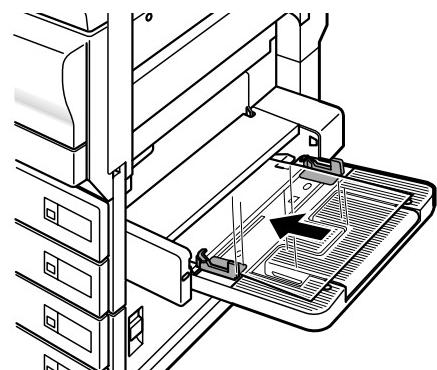

- When loading OHP film, load it to match the orientation of the document.

Reference

After loading the film, set the paper type of the bypass paper setting to [OHP]. (see page 1-38)

- Place the printing surface downward and load the film.

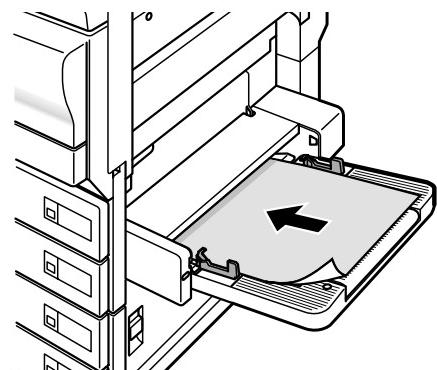

■ For label sheets

Note

Do not load more than 50 sheets at a time.

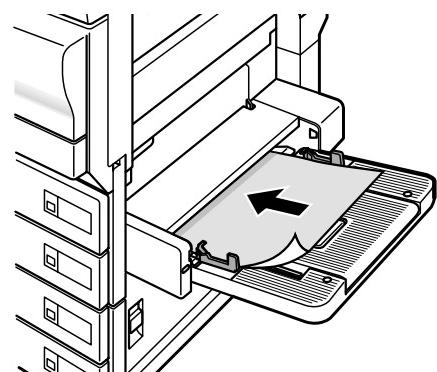

- When loading label sheets, load it to match the orientation of the document.

Reference

After loading the sheets, set the paper type of the bypass paper setting to [Paste Board]. (see page 1-38)

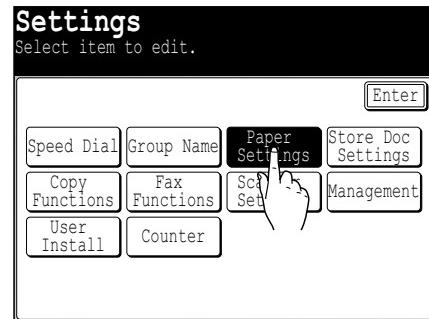

- Place the printing surface downward and load the sheets.

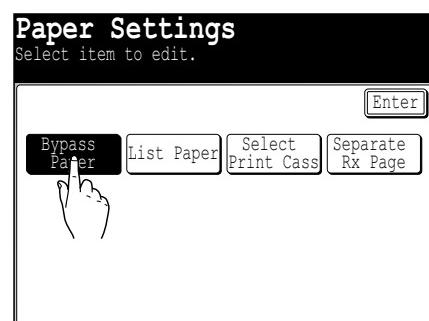

Bypass paper registration

This operation can be simplified by registering paper often used in the bypass tray. Up to 3 custom sized papers can be registered.

1 Press **SETTING**.

2 Press **[Paper Settings]**.

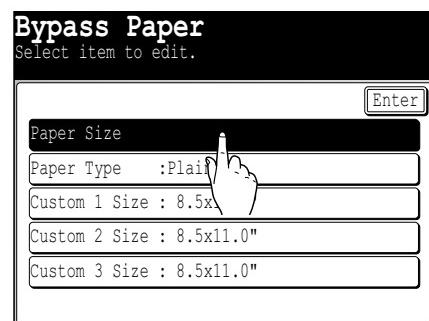

3 Press **[Bypass Paper]**.

■ Registering often-used sizes

This operation can be simplified by registering the paper size often-used in the bypass tray.

4 Press **[Paper Size]**.

How to Load Document

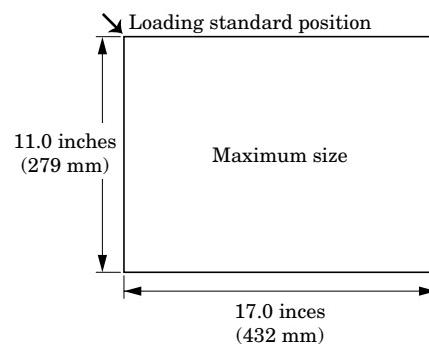

There are two ways to scan a document, one is using the “ADF” to automatically feed the document, and the other is the “document glass” that is used to scan books and other three-dimensional objects.

Loadable document sizes

● Document size for the ADF

● Document size for the document glass

◆ For the ADF

	When scanning just one sheet	For automatic continuous scanning
Maximum	Vertical 11.7 inches × horizontal 35.4 inches (11.7 inches × 25.6 inches in 600 dpi × 600 dpi) When copying: Horizontal 17.7 inches	Vertical 11.7 inches × horizontal 17.0 inches (JIS A3) (11.7 inches × 25.6 inches in 600 dpi × 600 dpi) When copying: Horizontal 17.7 inches
Minimum	Vertical 4.7 inches × horizontal 3.9 inches	Vertical 5.8 inches × horizontal 4.1 inches (JIS A6 □)
Number of sheets that can be loaded at once	—	11"×17": 30 sheets Letter (80 g/m ²): 100 sheets
Document paper thickness	35~128 g/m ² (0.05~0.15 mm)	52.3~104.7 g/m ² (0.07~0.12 mm)
Document paper quality	High-quality paper or comparable	

Up to 17.0 inches (432 mm) is copied. (The remaining 0.7 inch (18 mm) is not copied.)

◆ For the document glass

Maximum	Vertical 17.0 inches × horizontal 11.0 inches
Minimum	Unlimited

Appendix

Document scan range

Be aware that the inclined areas will not be scanned even if there are characters on them.

Document precautions

The following documents cannot be loaded in the ADF.

Please use the document glass.

- Torn documents or those with holes in them
- Extremely wrinkled or curled documents
- Moistened documents
- Documents with static electricity
- Documents with carbon on the back
- Cloth or metal sheets, OHP sheets
- Documents with staples, paper clips, or adhesive tape on them
- Documents joined or glued together
- Glossy documents or documents with a special coating

Placing the following types of documents on the document glass could scratch or crack the glass.

- Strongly pressing down on a document when copying a thick document
- When a hard object is being used as a document, place it carefully on the document glass.
- Sharp protrusions could scratch the document glass.

How to load document

Make sure to dry correction fluid, ink and stamped areas completely before loading the document.

◆When loading the document in the ADF

- (1) Place the surface to be copied or transmitted upward and load it all the way to the back on the left side of the machine. (The loaded document will be copied or transmitted from the top of the stack.)
- (2) Align the document guide with the document width.
- (3) Carefully adjust it until it touches the edge of the document.

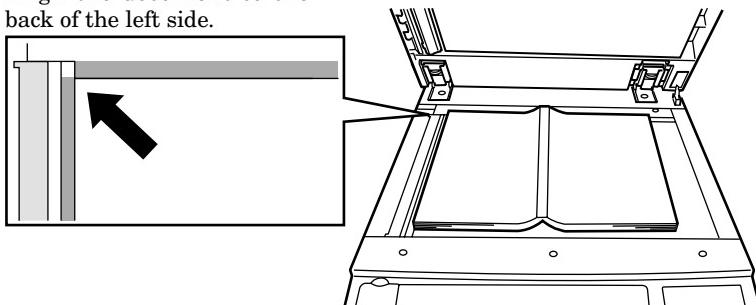

Face the surface of the document to be copied or transmitted upward.

◆When placing the document on the document glass

- (1)Open the platen cover, place the surface to be copied or transmitted downward, and align the document to the loading guide on the back of the left side.
- (2)Carefully close the platen cover to closely fit the document to the glass.

Align the document to the
back of the left side.

Basic Settings (Setting Mode)

Configure the settings required by the machine.

Operating tips

- Registration items in User Install are as follows:

- **Language setting**

You can select the language displayed in the Touch screen among English, French and Spanish. The default setting is English.

Note

The selected language will be applied to the output list as well as the screen display; however, the voice guidance is available only in English.

- **Time setting**

This is used to correctly set the display time. This is basic to all fax operations, such as the Delayed transmission and Journal. Enter the year, month, day, hour, and minutes. Use the 24-hour clock to enter the time.

- **Daylight saving time setting (DST)**

When this setting is ON, your machine automatically recognizes DST at 2 A.M. on the appropriate switchover Sunday each year. When the setting is OFF, no automatic change will occur.

- **Communication line**

Set this to match the type of line to which the machine is connected. If the wrong setting is made, telephoning and faxing cannot be performed.

- **Reception mode**

Select the desired reception mode from Fax Ready Mode, Tel Ready Mode, Tel/Fax Ready Mode, Fax/Tel Ready Mode, or Ans/Fax Ready Mode.

Reference

Refer to page 1-55 for information regarding how to select the reception mode.

- **Dial tone detection**

This is used to detect the dial tone. Select OFF normally. Change to ON if the detection is required, however, which will prevent the fax transmission through the line that does not send the dial tone.

- **Senders name**

This makes it easy to show the senders name to the receiving party, to print the name on the document received by the receiving party, and for the receiving party to tell where the document came from. Three types of sender's name can be set, and up to 22 characters can be entered for each type.

- **Standard TTI**

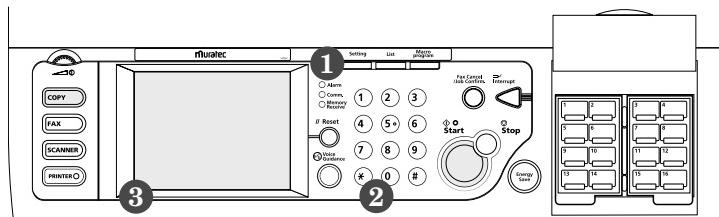

Of the set three types of sender's name, the sender's name that is used most often can be set as the standard sender name.

- **TTI number**

The fax number of this machine can be shown to the receiving party or printed on the document received by the receiving party. Up to 20 digits can be set.

Keys to be used here

- ① SETTING

Voice Guidance

Voice guidance uses “audible messages” to explain functions or the operation method.

VOICE GUIDANCE

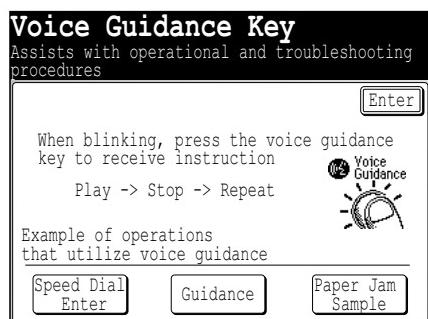

VOICE GUIDANCE flashes when voice guidance can be given and during an audio message. Voice guidance can be stopped by pressing **VOICE GUIDANCE** again during the message.

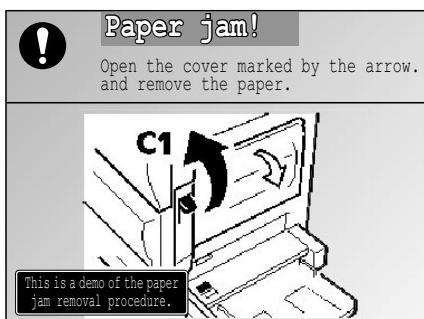

<Flashing>

■ Voice guidance sample display

When **VOICE GUIDANCE** is pressed when it is not flashing, a voice guidance example is displayed.

- Press [**Speed Dial Enter**] to display the speed-dial setting enter/edit screen. (see step 3, on page 1-60)
- Press [**Paper Jam Sample**] to display a sample demonstration of a paper jam troubleshooting method.

- Press [**Guidance**] to change the mode or volume for the voice guidance. (see step 4 on page 1-61)

Voice guidance items

■ Operational guidance

This explains functions, the registration/setting method and paper jam clearing method.

Note

Voice guidance is only given for some functions and paper jams.

■ Error reset guidance

When there is a problem with the machine, like a paper jam, guidance is given on how to clear and reset the problem.

■ Notice guidance

Guidance of the machine's status, such as "A document has been left on the glass" when a document has been left on the glass.

Note

For "Error Reset Guidance" and "Notice Guidance", guidance automatically starts depending on the machine status regardless of **VOICE GUIDANCE** status.

■ Complete beep

This guidance is given when copying has been completed, a fax transmission/reception is completed and when the received document printing is completed.

Reference

Set "Voice" for each completion sound at Complete Beep in Sound Settings. (see page 1-62)

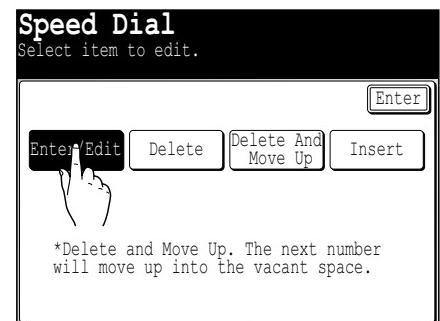

Operation guidance mode

There are 2 types of modes in operation guidance. The default setting is "Manual".

OP. guidance mode	Operation
Automatic	Audio messages are given whenever available.
Manual	User must press VOICE GUIDANCE in order to receive audio instruction.

Example: Speed-Dial Enter/Edit

- 1 Press **SETTING** and then press **[Speed Dial]**.
- 2 Press **[Enter/Edit]**.

- 3 **VOICE GUIDANCE** flashes.
Press the speed-dial number you want to set.

Mode “Automatic”:

Automatic operational guidance begins when this screen is displayed.

Mode “Manual”:

Operation guidance begins when **VOICE GUIDANCE** is pressed.

Voice guidance:

“Select the speed-dial you want to edit.....”

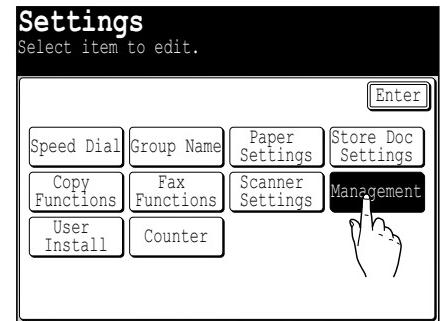

Note

When in manual mode, voice guidance is completed when the enter/edit operation finishes and the display returns to the step 3 screen.

Voice guidance settings

The messaging volume and operational guidance mode can be set.

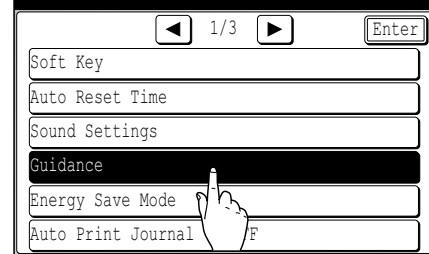

- 1 Press **SETTING**.
- 2 Press **[Management]**.

3 Press [Guidance].

Management

Select item to edit.

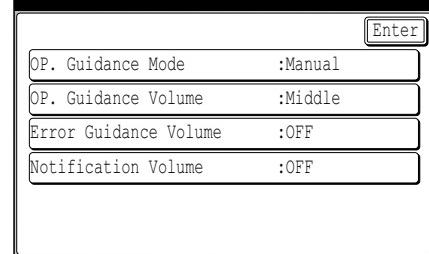

Reference

For the voice guidance items, see next page.

4 Press the function you want to set.

Guidance

Select item to edit.

Function	Description	Setting
OP. Guidance Mode	Set the operation guidance mode.	Auto <u>Manual</u>
OP. Guidance Volume	Set the operation guidance messaging volume.	Low <u>Middle</u> High Full
Error Guidance Volume	Set the error reset guidance messaging volume. When this is set to OFF, error reset guidance will not be given.	<u>OFF</u> Low Middle High Full
Notification Volume	Set the notice guidance messaging volume. When this is set to OFF, notice guidance will not be given.	<u>OFF</u> Low Middle High Full

Note

Underlined items are the factory default.

COPY

Before Copying

Document size automatic detection

- Both the ADF and the document glass can automatically detect 11"×17", Legal (14"×8.5"), Letter (11"×8.5"), Letter[□] (8.5"×11"), Half-letter (8.5"×5.5"), and Half-letter[□] (5.5"×8.5") sized documents.
- When the document size cannot be automatically detected

The following message will be displayed when the document size detection sensor is not working properly because the scanner is operating or the platen cover is open.

- Press [Yes] or START to copy onto the selected paper.

Note

Depending on the paper, the image could run off the paper or there could be extra blank areas on the paper.

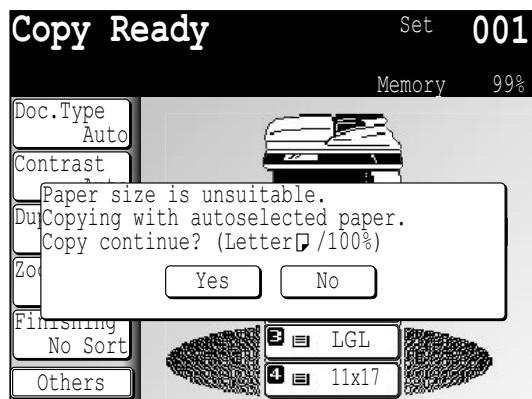

- Press [No] or RESET to cancel the operation and return to the standby screen.

Note

Restart the operation by selecting the paper to be used for copying or specifying the scan size.

- When the size is automatically detected, but matching paper is not loaded into the cassettes

The following message will be displayed when the machine cannot locate appropriate paper.

- Press [Yes] or START to copy onto the selected paper.

Note

Depending on the paper, the image could run off the paper or there could be extra blank areas on the paper.

- Press [No] or RESET to cancel the operation and return to the standby screen.

Note

Change the copy magnification, and restart the operation.

Appendix

Document type/contrast setting

Select the document type/contrast to match the document and text.

■ Document type

- 1 Press [Doc.Type].

Reference

The document type default value can be changed. For details of changing the default, refer to "Copy Functions Settings" on page 2-94.

- 2 (1) Select the desired document type from the touch screen.

●Auto

Priority is given to text to automatically scan the document at a suitable setting. (Default)

●Text&Photo

The document is scanned at a setting suitable for documents containing a mixture of images and text.

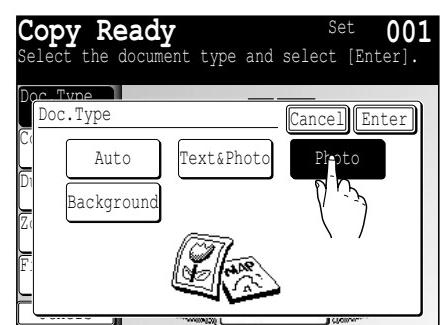

●Photo

The document is scanned at a setting that is suitable for images.

●Background

This mode will suppress the printout of a documents background.

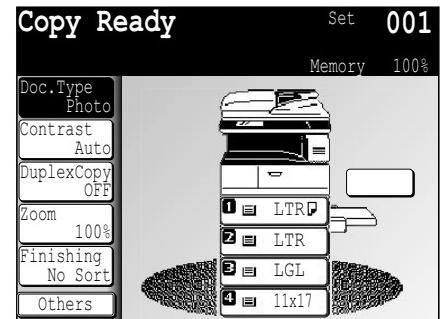

- (2) Press [Enter].

Note

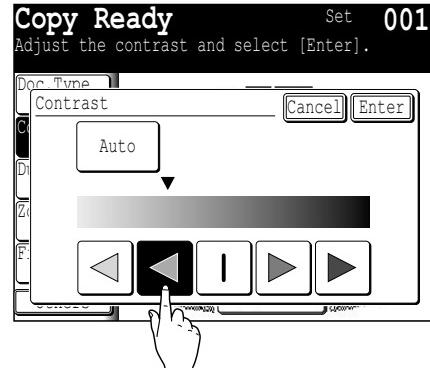

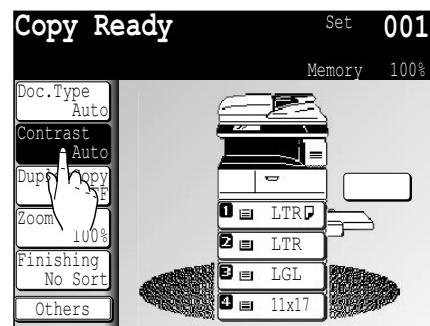

Press **RESET** to cancel the settings.

- 3 Changed to the selected resolution.

■ Contrast

1 Press [Contrast].

Reference

The contrast default value can be changed. For details of changing the default, refer to "Copy Functions Settings" on page 2-96.

2 (1) Select the desired contrast from the touch screen.

The contrast can be automatically selected or manually selected from 5 levels to match the document.

●Auto

The document is automatically scanned at a suitable contrast. (Default)

●Lightest

To scan at a lighter contrast

●Lighter

To scan at a lighter contrast

●Normal

For normal documents

●Darker

To scan at a darker contrast

●Darkest

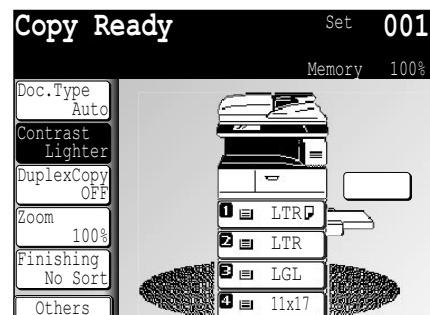

To scan at the darkest contrast

(2) Press [Enter].

Note

Press **RESET** to cancel the settings.

3 Changed to the selected contrast.

Setting reset

●Automatic reset

When the machine has not operated for a set period of time, any adjusted settings made during the previous copy job will return to the default setting status.

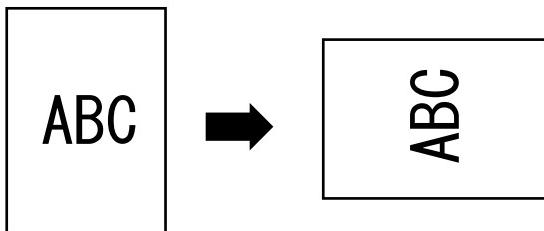

The machine is programmed to reset after three minutes, however this can be changed by the user. (see page 4-35)

●Using **RESET** to reset the settings

Press **RESET** to return to the default values. When you finish copying, press **RESET** to reset the settings for the next person.

Rotate copy

●Even if the paper is not loaded in the same orientation as the document, the machine will automatically rotate the image to make copying possible.

●The direction of rotation is counterclockwise.

●During zoom in/out copying, the image will be rotated so that the document should fit on the paper. However, the rotation will not be performed when the zoomed image is larger than the 11"×17"width.

*Example: Automatic zooming of Letter → 11"×17" or a 129% copy.

●Rotation is not performed when the paper size and zoom are specified.

●Rotation is not performed for custom size documents or when the document size cannot be automatically detected.

●Rotation is not performed during Combine copy, Repeat, or XY zoom.

●Rotation copying is not performed to paper sizes other than Letter, Letter, Half-letter, and Half-letter.

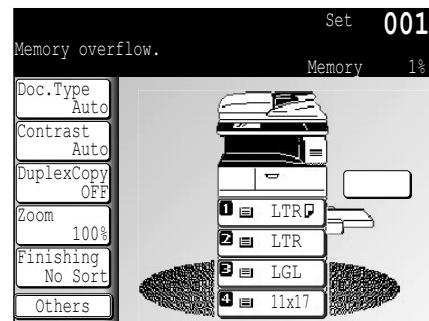

Memory overflow during copying

When the memory overflows during a copy job, take the following steps.

- ■ When the memory overflows during the first page of the document scan

Press **STOP** to return to the standby screen.

→ Change the resolution or wait until the memory is available before trying to copy again.

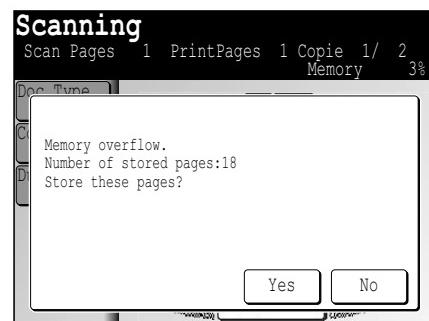

- ■ When the memory overflows during the second page or later of the document scan

· Press [**Yes**] to copy the stored pages.

· Press [**No**] to cancel the copy.

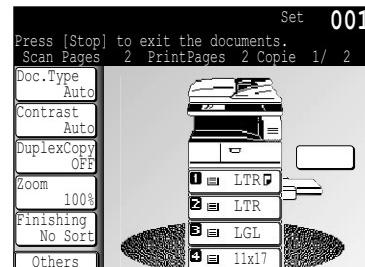

→ Change the resolution or wait until the memory is available before trying to copy again.

Note

When using the ADF, the display on the right is shown when the documents still remain.

Press **STOP** to discharge the remaining documents.

How to Perform Basic Copy

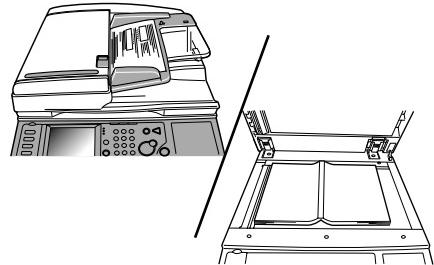

Operating tips

- Press **COPY** to change to the Copy screen.
- For the default settings, copying is performed at Zoom 100%, Paper: Automatic, Document type: Automatic, and Contrast: Automatic.
- For “Paper: Automatic,” the paper that matches the document will be selected. The selectable paper sizes are 11”x17”, Legal, Letter, Letter[□], Half-letter, and Half-letter[□]. Other paper sizes will not be automatically selected. In this case, press the touch screen to select the cassette containing the paper you want to copy on.
- Copying cannot be performed when a real time transmission has been scheduled. (see page 3-62)

Reference

How to load document
(see page 1-42)

1 Load the document.

Reference

Document type/contrast
setting (see page 2-4)

2 Set the document type and contrast as necessary.

Note

- This can be set from 1 to 999.
- If you make an incorrect entry, overwrite it with the correct entry.
- When the number of copies is not set, 1 copy will be made.

3 Perform the settings for each copy function.

4 Use the numeric keypad to enter the number of copies.

5 Press **START**.

Copy will begin.

Next document setting

The next document can be set when performing Sort Copy (see page 2-22), Combined Copy (see page 2-30), Duplex Copy (see page 2-67), Booklet Copy (see page 2-78) or Card Copy (see page 2-86) to scan a different document.

Operating tips

The Next document default setting is “No” when using the ADF, and “Yes” when using the document glass.

Reference

How to load document
(see page 1-42)

Note

Card Copy is available
only from the document
glass.

When using the ADF

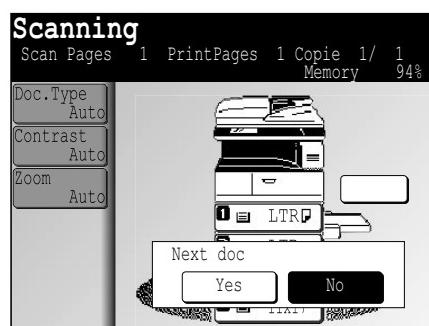

1 Load the document.

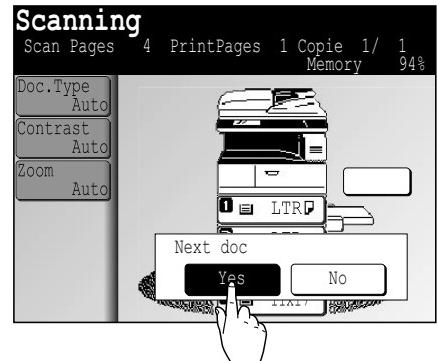

2 Set Sort Copy/Combine Copy/Du-
plex Copy/Booklet Copy.

3 Press **START**.

- 4 Press [Yes] while the document is being scanned.

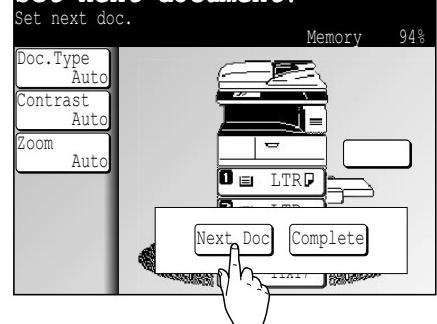

- 5 When scanning has been completed, load the next document.

- 6 Press [Next Doc]. Scanning of the next document will begin.

Note

- The Next Doc setting can be deleted by pressing [Complete].
- To scan another document, press [Yes] during the document scan.

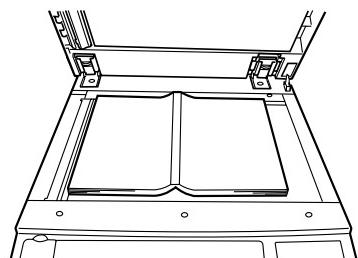

Set next document.

- 7 Copying will start when scanning has been completed.

■ When using the document glass

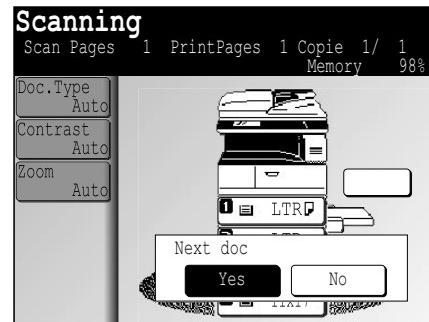

- 1 Load the document.

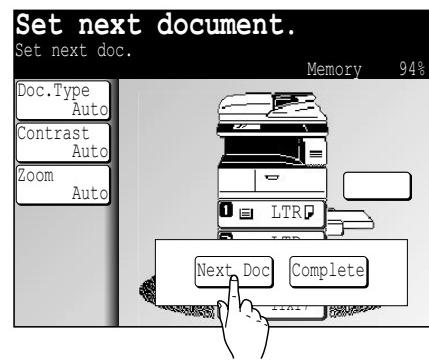

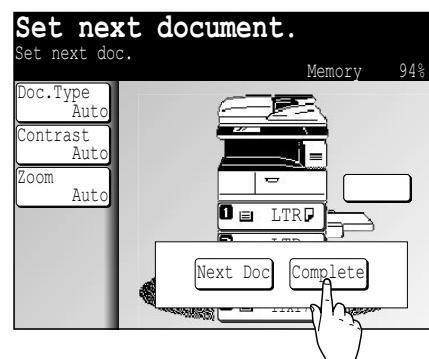

- 2 Set Sort Copy/Combined Copy/Duplex Copy/Card Copy.

Note

Copying of the first copy will start when scanning has been completed.

3 Press **START**.**4** When scanning has been completed, load the next document (if a book, set the next page in place).**Note**

Pressing [**No**] during document scanning will start the copying of all documents when the scan has been completed.

5 Press [**Next Doc**]. The scanning of the next document will begin.**6** Press [**Complete**] when all the documents have been scanned.**7** Copying will start from the second copy.

Copying using both document glass and ADF

Activating the next document setting will allow you to make a copy using both the document glass and ADF.

- 1** Load the document in the ADF or on the document glass.

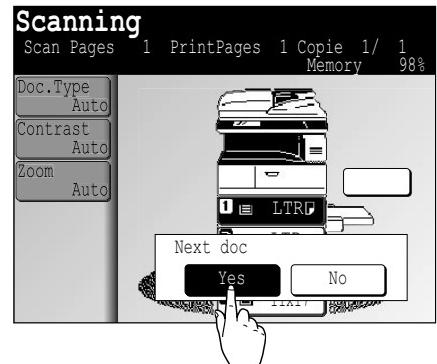

Note

Card Copy cannot be used for Combined copy.

- 2** Set Sort Copy/Combined Copy/Duplex Copy.

- 3** Press **START**.

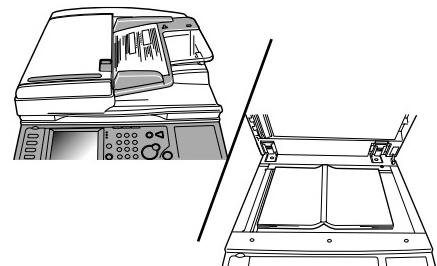

- 4** When the document has been loaded into the ADF, press **[Yes]** during scanning.

Note

When a document is loaded in the ADF, remove the document from the document glass.

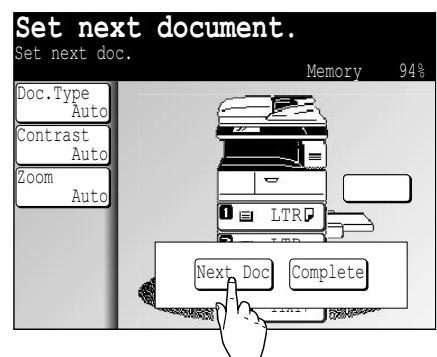

- 5** When scanning has been completed, load the next document.

Note

Press **[Complete]** to begin copying.

- 6** Press **[Next Doc]**. The next document will be scanned.

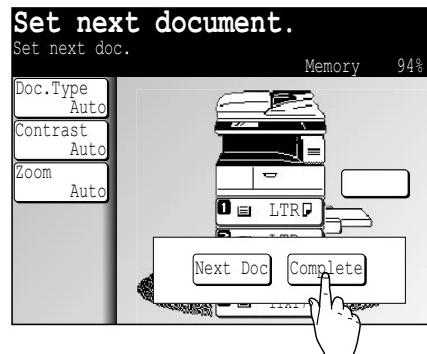

Note

When the document is scanned using the ADF, copying will begin automatically.

In this case

- 7 When the document is scanned using the document glass, press [Complete] to begin copying.

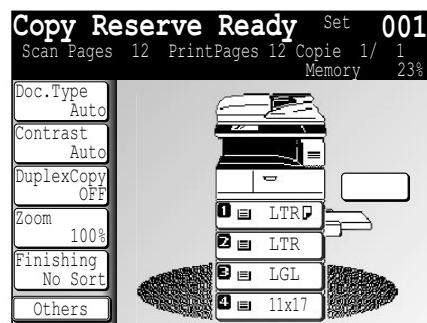

- To have the next document scanned, press "Next Doc" while the document is being scanned.
- The ADF's default setting is set to "Complete". To scan the next document, select "Next Doc" while the current document is being scanned. For the document glass, the default setting is "Next Doc".
- Setting to "Complete" during scanning will begin copying of the scanned documents.

Copy reservation

A different document can be loaded and reserved for copying even while another copy is being printed. When the printing copy is completed, the copying of the next job will begin, meaning no wasted downtime!

- 1 "Copy Reserve Ready" is displayed while the copy is printing.

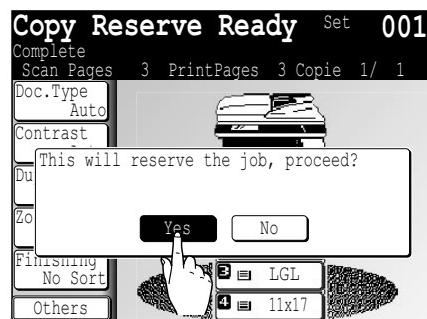

- 2 Load the document you want to reserve.

- 3 Set the document type and contrast as well as the functions as necessary.

- 4 Press **START**.

- 5 Press **[Yes]** to perform Copy reservation.

Scanning of the document will begin, and copying will start as soon as the current copy job is completed.

Appendix

Selecting the Paper and Copy

The default setting automatically selects the paper to match the document, but you can specify the paper for copying beforehand.

Reference

- How to load document (see page 1-42)
- Set the document type and contrast as necessary. (see page 2-4)

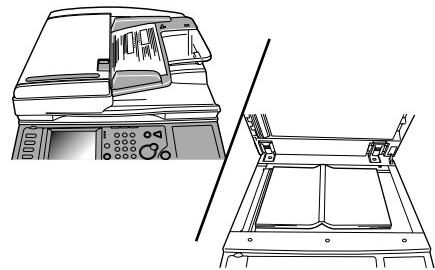

Note

Press **RESET** to cancel the settings.

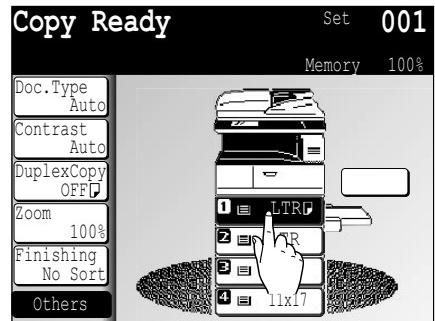

Reference

For using bypass tray for copying, refer to "Bypass copy" on page 2-15.

1 Load the document.

2 From the touch screen, select the cassette containing the paper you want to use for copying.

3 Press **START** to begin copying.

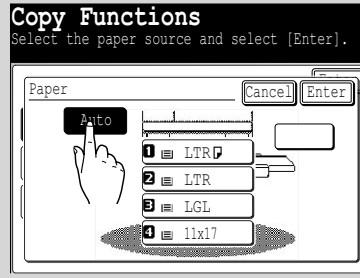

In this case

To automatically select the paper:

- Select [**Other**].
- Press [**Paper**].
- (1) Press [**Auto**].
(2) Press [**Enter**].

Bypass copy

Bypass copy is available with the bypass tray.

Reference

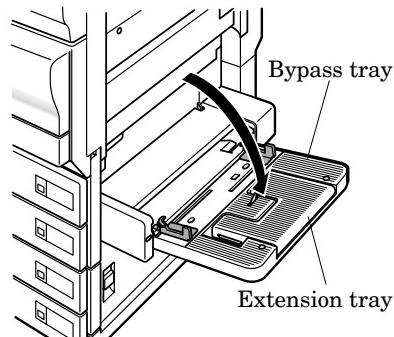

For loading paper in the bypass tray, refer to page 1-32.

1 Load the document.

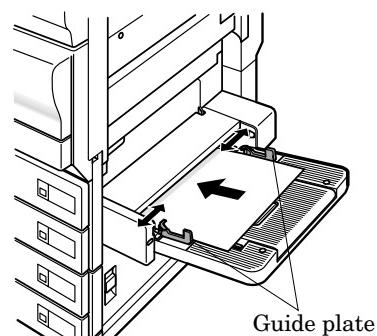

Note

When loading paper that is larger than the bypass tray, open the extension tray.

2 Open the bypass tray.

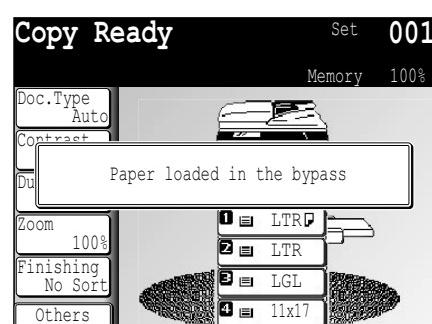

3 Align the guide plate to the paper size. Place the printing surface downward, and load the paper by inserting its edge all the way to the back.

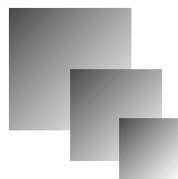

Note

Be sure to place the printing surface downward.

4 The bypass tray is automatically selected when paper has been loaded into it.

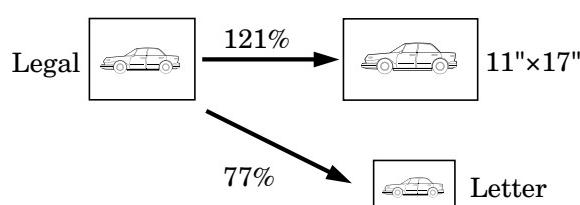

5 Press **START** to begin copying.

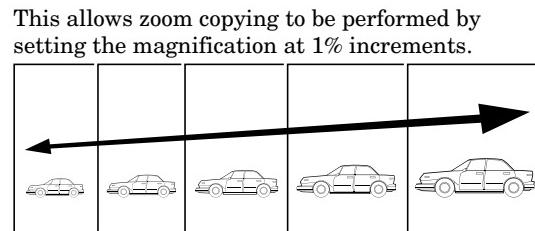

Zoom Copy

Zoom copy consists of the method of automatically zooming to match the paper size (automatic magnification) and the method of zooming by setting the magnification (set magnification). The two magnification setting methods are to specify a previously set magnification or to freely set the magnification (zoom).

Set magnification

Paper specification (automatic magnification) zoom

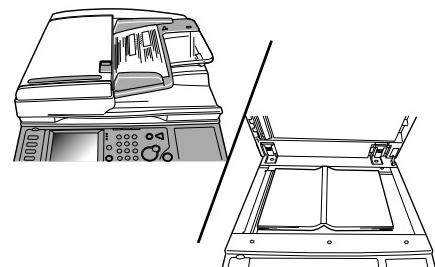

Zoom to match paper size (Automatic magnification)

Zoom copying is performed by automatically selecting the magnification to match the specified paper size.

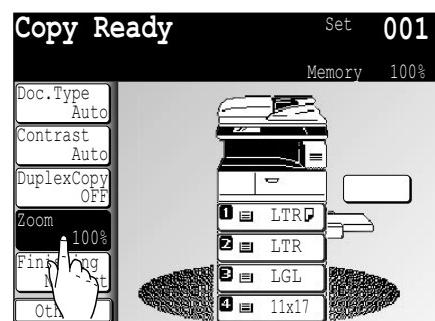

Reference

- How to load document (see page 1-42)
- Set the document type and contrast as necessary. (see page 2-4)

1 Load the document.

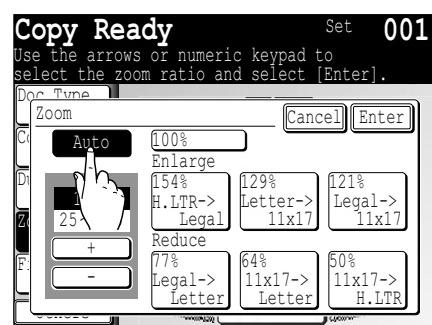

2 (1) Press [Zoom].

Note

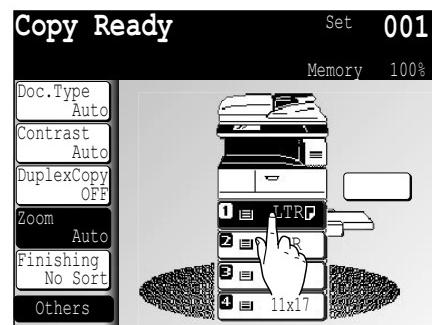

When [Auto] is selected for the magnification, the paper in the first cassette is selected.

- (2) Press [**Auto**].
 (3) Press [**Enter**].

**Note**

When using the automatic paper setting, the magnification is set to 100%. In this case, repeat from step 2.

- 3** Select the desired paper from the touch screen.

**Note**

- This can be set from 1 to 999.
- If you make an incorrect entry, overwrite it with the correct entry.
- When the number of copies is not set, 1 copy will be made.
- Press **RESET** to cancel the settings.

- 4** Use the numeric keypad to enter the number of copies.

- 5** Press **START**.

Zoom by specifying magnification (Set magnification)

Select from the previously set magnifications and perform zoom copying.

Operating tips

- Depending on the selected magnification, the image could run off the paper or there could be extra blank areas of paper.
- The paper is automatically selected depending on the set magnification. To select the paper, press the touch screen to select the paper.
- Cassettes containing paper other than 11"×17", Legal, Letter, Letter \square , or Half-letter, Half-letter \square cannot be selected even if the paper setting has been set to "Auto". From the touch screen, select the cassette containing the paper you want to use for coping.

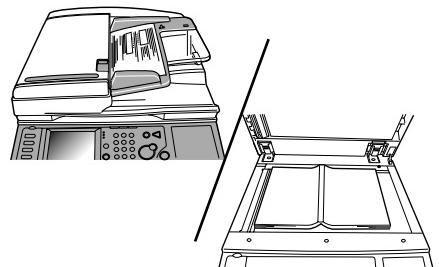

Reference

How to load document
(see page 1-42)

Note

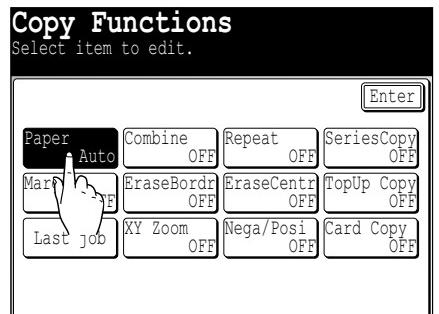

At the default setting,
the paper setting is set to
[Auto].

1 Load the document.

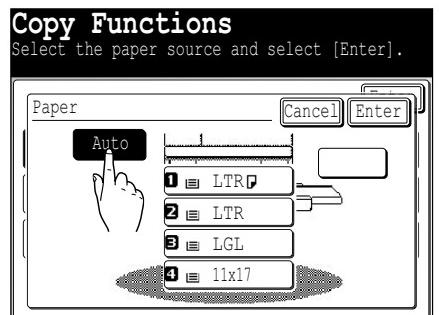

2 When the paper setting is not set to [Auto], use the following procedure to set it to [Auto].

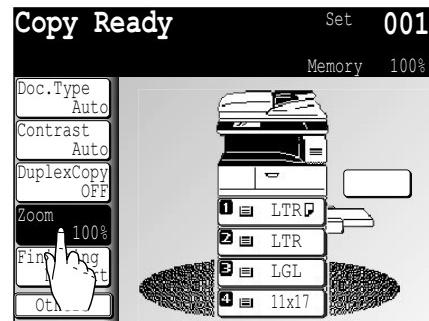

- (1) Select [**Others**].
- (2) Select [**Paper**].

- (3) Press [**Auto**].
- (4) Press [**Enter**] twice.

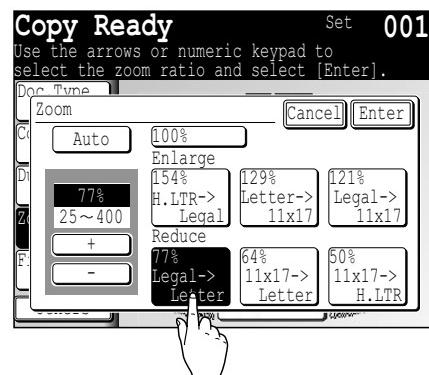

3 Press [Zoom].

Note

When [Auto] is selected for the magnification, the paper in the first level is selected. In this case, repeat from step 2.

4 (1)Select the magnification.
(2)Press [Enter].

Note

- This can be set from 1 to 999.
- If you make an incorrect entry, overwrite it with the correct entry.
- When the number of copies is not set, 1 copy will be made.
- Press **RESET** to cancel the settings.

5 Use the numeric keypad to enter the number of copies.

Interrupt Copy

If you immediately need to make a copy, you can interrupt the current job to make a copy.

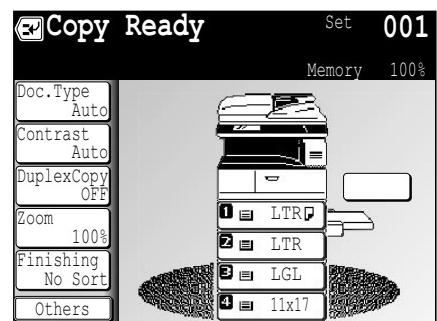

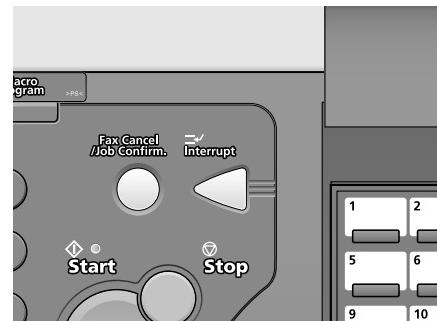

Operating tips

- Interrupting is available during copy scanning, copy printing, and while adjusting settings, such as document type and resolution.
- Interrupting is not available during advanced copying or while setting functions.

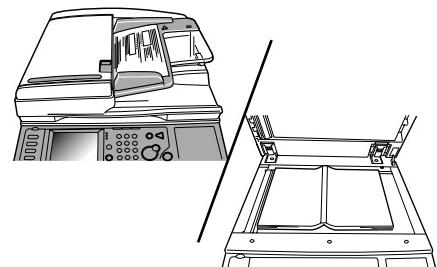

Note

The key lamp will illuminate.

1 Press **INTERRUPT**.

2 If a document remains after copying, remove it. When copying using the ADF, press **STOP** to discharge the remaining documents.

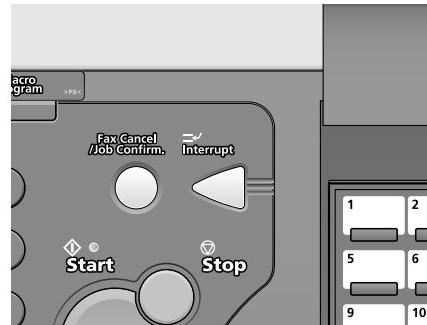

3 Load the document for the interrupting copy.

4 Make the copy.

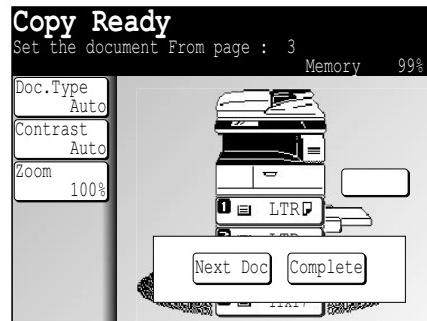

Note

The key lamp will go out.

- 5** (1) When copying has been completed, press **INTERRUPT**.

- (2) The machine will return to the settings prior to interruption.

**Note**

- Press **[Complete]** to copy the document up to where scanning was stopped.
- When the interrupt was made during copy printing, it continues to print the copy.

- 6** Load the document that was being copied before the interruption and press **[Next Doc]**.

Note

- After interrupt copying is completed, press **INTERRUPT** to cancel the interruption. Interrupt function cannot be automatically cancelled.

COPY

Combined Copy

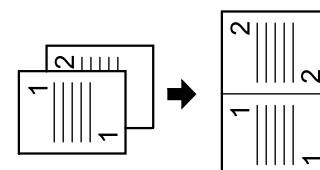

A multiple sheet document can be copied into an arrangement on one sheet of paper.

● 2 sheets of document onto 1 sheet of paper

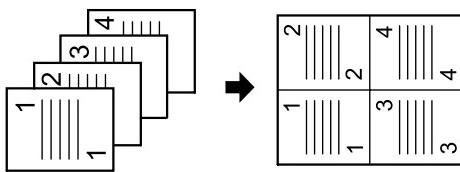

⇨ Document insertion direction

· To copy onto □ paper

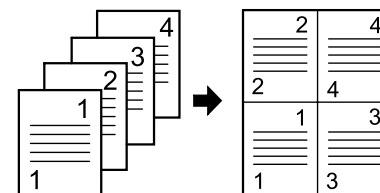

⇨ Document insertion direction

● 4 sheets of document onto 1 sheet of paper

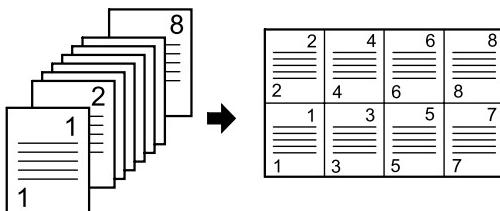

⇨ Document insertion direction

· To copy onto □ paper

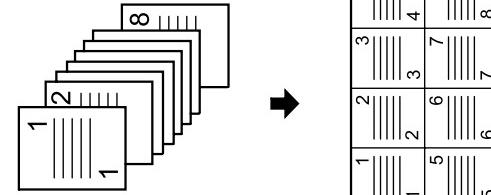

⇨ Document insertion direction

● 8 sheets of document onto 1 sheet of paper

⇨ Document insertion direction

· To copy onto □ paper

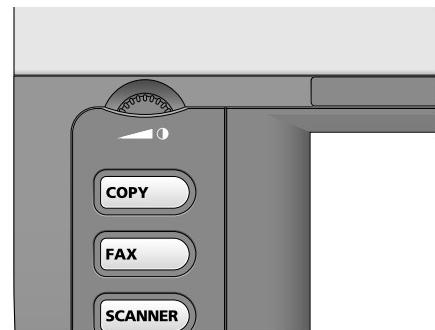

⇨ Document insertion direction

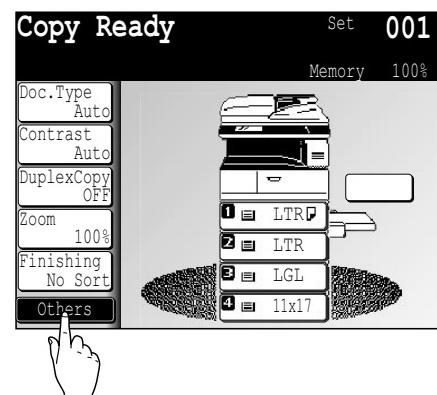

Operating tips

- The number of documents that can be arranged on 1 sheet of paper is 2, 4, and 8.
- The automatic magnification will be set at the moment combined copy is set even if an optional copy magnification is set. Set the optional magnification while setting the combined copy.
- The copied image might have areas missing depending on the paper and document.
- When the number of document sheets is less than the set combined sheet number, the spaces reserved for the other sheets are left blank.
- Rotate copying is not available. Load the document as shown in the screen display. When the number of document sheets is 4, load them in the same orientation as the paper, and when it is 2 or 8, load them in the opposite orientation as the paper. For example, when copying 2 document sheets onto Letter paper, load the document in the opposite orientation as Letter □ paper.

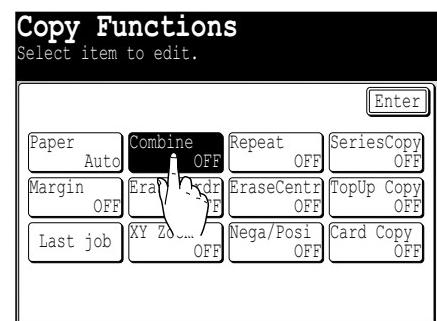

1 (1) Press **COPY**.

(2) Press [**Others**].

Copying with Different Magnification Ratios Horizontally and Vertically (XY Zoom)

You can copy the document with different magnification horizontally and vertically (XY ratio magnification). You can also copy entering the post-copy vertical and horizontal size to have the machine calculate the magnifications to match the specified size (XY size magnification).

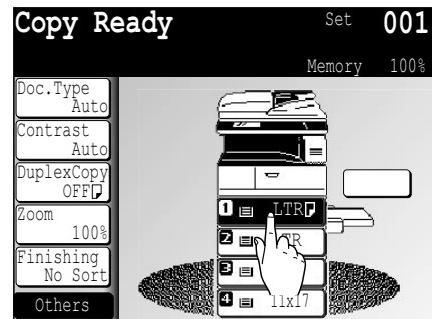

Specifying vertical and horizontal magnifications separately (XY(%) magnification)

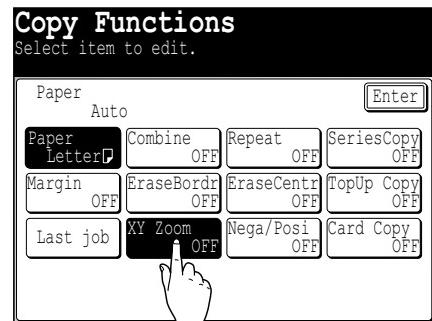

- Copying can be done with the vertical and horizontal magnification ratio specified separately.
- The magnification can be specified regardless of the document or paper size, so that the copied image could have areas missing or a margin could be formed depending on the settings and paper conditions.

1 Load the document.

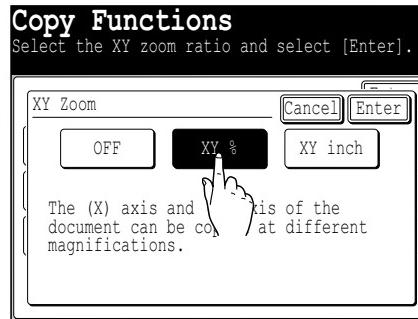

2 From the touch screen, select the cassette containing the paper you want to use for copying.

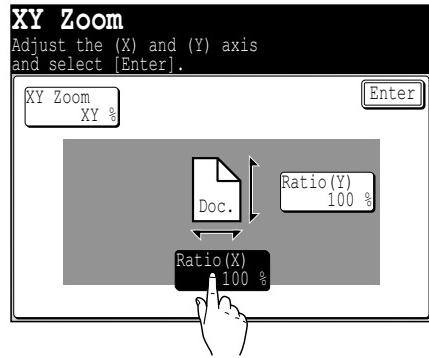

3 (1)Press [**Others**].
(2)Press [**XY Zoom**].

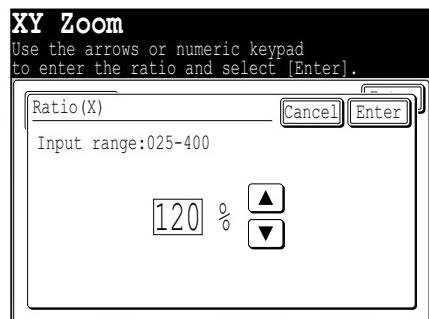

- 4 (1) Press [XY %].
 (2) Press [Enter].

- 5 (1) Select the magnification ratio you want to change.

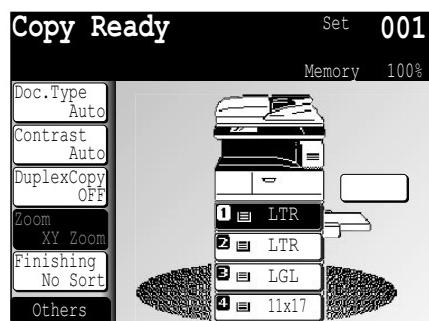

- (2) Use the numeric keypad or [Δ] [∇] to enter the magnification (25 to 400%).

Setting to copy to specified size (XY inch)

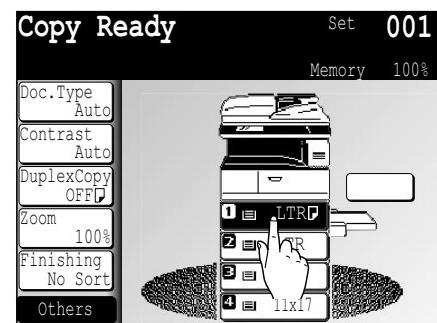

- Copying can be done with the magnification automatically calculated by the machine to produce a copy of the specified size by entering the document size and post-copy size.
- The copied image might have areas missing depending on the paper and document. (Custom documents, etc.)
- This setting cannot be made if the calculated magnification is set to less than 25% or more than 400%.

Operating tips

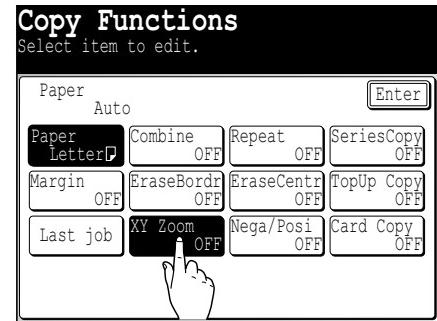

When the document is loaded before the XY Zoom is set, the document size will be entered automatically.
(When automatic detection is possible)

- 1** (1) Press **COPY**.
(2) Load the document.

- 2** From the touch screen, select the cassette containing the paper you want to use for copying.

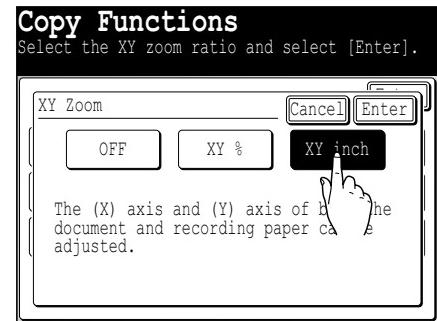

- 3** (1) Press [**Others**].
(2) Press [**XY Zoom**].

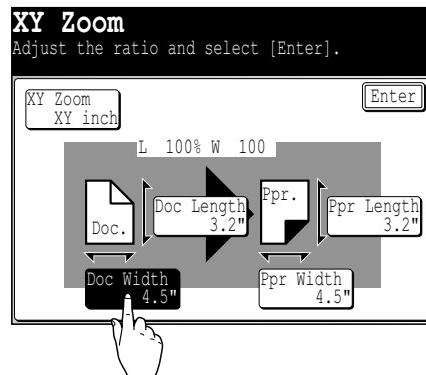

Note

- When XY Zoom % is set, the screen from step 4(1) on the previous page will be displayed.
- To set [XY inch], press [XY Zoom].

- 4** (1) Press [**XY inch**].

Recopying Previous Copy Job (Last Job)

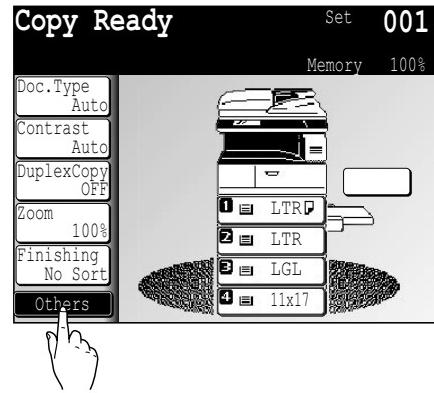

By storing the scanned document in memory you can recopy a previous job without searching for the original.

Operating tips

- Last Job is available when the previous scanned document is still stored in memory.
 - Last Job is not available when the last copy job has been deleted, the preset time limit expired or if the free memory space is not enough.
 - The memory hold time can be set as well. In addition, Last Job copying can be prohibited by setting the hold time to 0 minute. (see page 2-97)
- (The default hold time is 0, which means Last Job copying is prohibited at the time of installation.)

How to perform last job copy

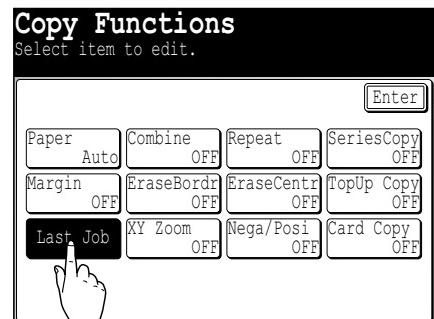

- 1 (1) Press **COPY**.
(2) Press **[Others]**.

Note

If a document is not stored in memory, the error message, "No document stored in memory" will appear.

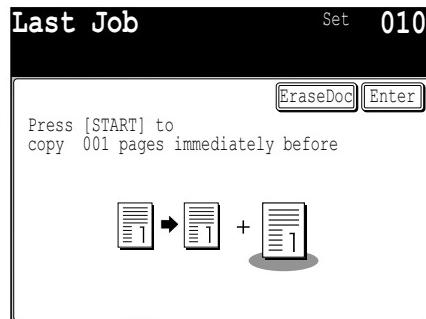

- 2 Press **[Last Job]**.

Note

- If you make an incorrect entry, overwrite it with the correct entry.
- Press **RESET** to cancel the settings.

Duplex Copying

The MFX-2830 can convert two-sided originals into one-sided printouts. In addition, if the optional duplex unit is installed, the machine can also perform 5 types of duplex copying.

Operating tips

For duplex copying, copy to standard size plain paper. Using custom size paper or any paper other than plain paper (OHP sheets, postcards, etc.) could cause the paper jam in the duplex unit.

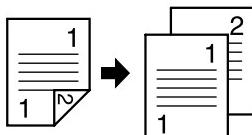

Reference

Refer to "Acceptable paper sizes". (see page 1-26)

Types of duplex copying

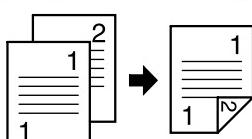

■ One-sided copying of duplex document

Use the duplex ADF to automatically feed the duplex document to make a one-sided copy of it.

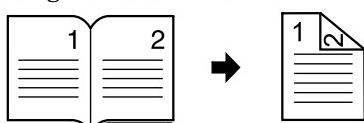

When the optional duplex unit is installed

■ Duplex copying of one-sided document

■ Duplex copying of right and left pages of facing documents

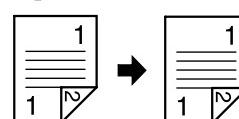

This copies the two pages of an opened book, etc., onto the front and back of one sheet of paper. The copied document has a different shape than the original document.

*Duplex copying of facing documents is only possible using the document glass.

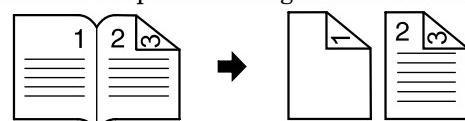

■ Duplex copying of duplex document

Use the ADF to feed the duplex document and make duplex copies.

■ Duplex copying of the front and back of facing documents.

The first page is copied onto the back of the paper, and the second page is copied onto the back of a different sheet of paper. From thereafter, duplex copying is performed by copying even number pages onto the front sides of the paper and odd number pages onto the back sides of the paper. The copied document has the same shape as the original document.

*The front side of the first page will be left blank.

*Duplex copying of facing documents is only possible using the document glass.

Blank: Can be simultaneously set

■ : Cannot be simultaneously set

● : The settings made later are valid.

x : The settings made previously are valid, or cannot be set later.

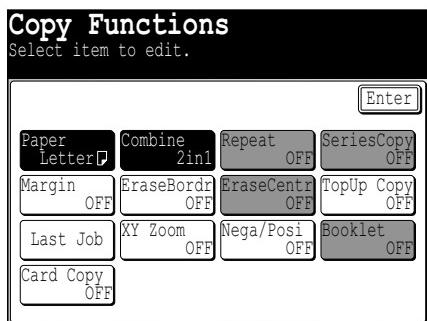

*1 Automatic magnification is possible for the document that is scanned first, but if the document size was changed during scanning, the magnification must be set manually.

*2: After "Carpet output to the 2 Bin tray" is displayed, press **copy** twice to output the copy to the paper output tray (bottom).

Display for advanced copy function that cannot be combined

The advanced copy function that cannot be combined together will be grayed-out.

Example: When Combine copy is set

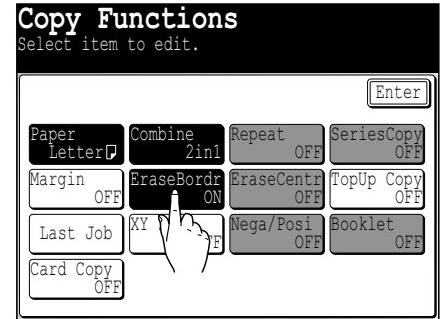

Cancelling one of combined advanced copy functions

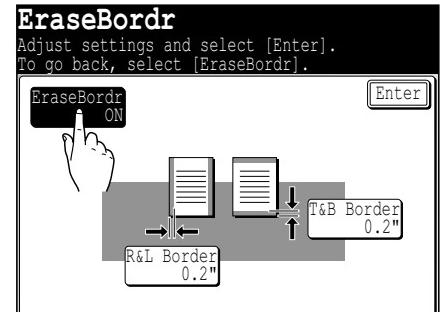

To cancel an advanced copy setting that is part of a combination, enter the advanced copy setting screen and switch it off.

Example: When combine copy and erase border are set, cancel just erase border.

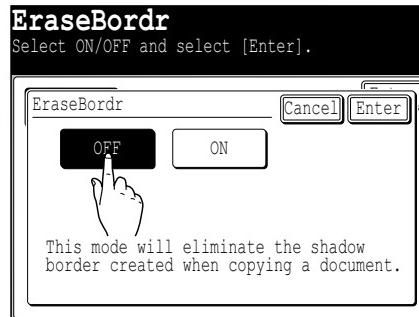

- 1 (1) Press [**Others**].
- (2) Press [**EraseBordr**].

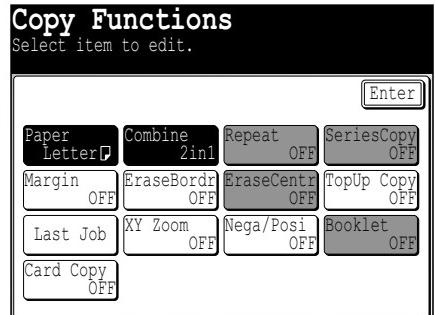

- 2 Press [**EraseBordr**].

- 3 (1) Press [OFF].
 (2) Press [Enter].

- 4 The erase border setting is canceled.

■ Individual function cancellation method

Note

Resetting is sometimes required after canceling individual functions.

COPY

Copy Functions Settings

You can set the copy functions default values such as for document type and contrast. Changing the default values of often-used functions can shorten the time required to adjust settings.

Operating tips

- Default value establishes the status when a document is loaded or **RESET** is pressed to return to the standby screen. The default values are re-established if the machine is left without any operation for a designated period of time. (Copy screen automatic reset)
- Factory defaults are the settings established at the time of shipment.

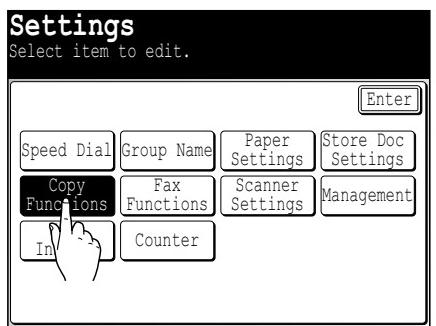

Sample copy function settings

An example of how to set the “Doc. type” is given below.

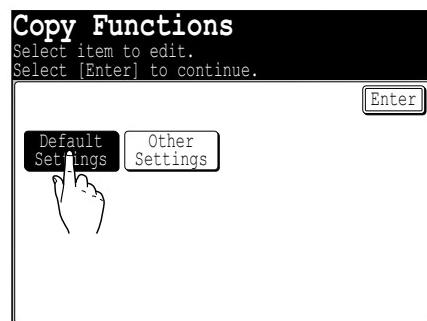

1 Press **SETTING**.

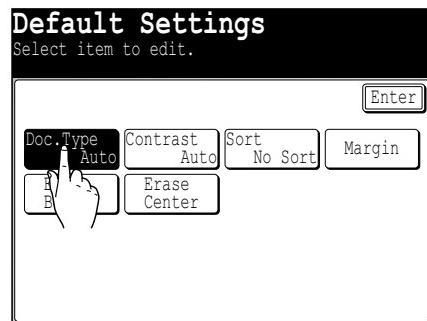

2 (1)Press [**Copy Functions**].

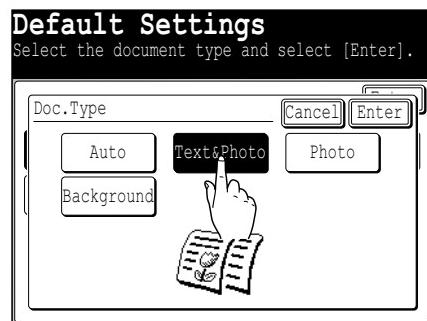

(2) Press [Default Settings].

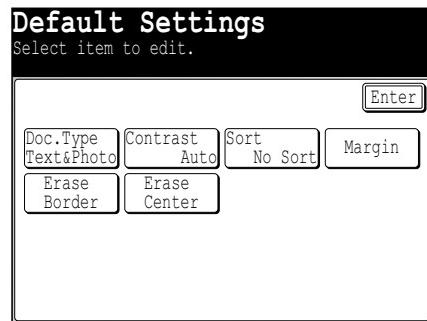

3 Select the function you want to set from the touch screen.

4 Select the setting value.

5 Press [Enter] to set the selected setting value. The display returns to the setting screen.
Continue to make the other adjustments.

Note

Press **RESET** to return to the standby screen.

Appendix

Default settings list

Function	Description	Setting
Doc. type	This sets the default setting for the resolution of the document to be copied. Matching the settings to the frequently copied documents can shorten the time required to adjust settings.	<u>Auto</u> , Text & Photo, Photo, Background
Contrast	This sets the default setting for the contrast of the document to be copied. Matching the settings to the frequently copied documents can shorten the time required to adjust settings.	<u>Auto</u> , Lightest, Lighter, Normal, Darker, Darkest
Sort	Sort will be defaulted to "Sort".	No Sort, Sort
Margin	Setting this to ON makes it possible to always have a margin added even without setting a margin in advanced copy. In addition, the top, bottom, right, and left margin widths can be set as default values.	<ul style="list-style-type: none"> ● Specifying the margin <u>ON</u>, <u>OFF</u> ● Setting the margin width default value Left/right/top/bottom from 0.0" to 1.0" : <u>0.0"</u>
Erase border	Setting this to ON makes it possible to always perform erase border even without setting erase border in advanced copy. In addition, the erase width default value can be set.	<ul style="list-style-type: none"> ● Erase border <u>ON</u>, <u>OFF</u> ● Setting the erase border width default value Top and bottom erase width 0.2" to 2.0" : <u>0.2"</u> Right and left erase width 0.2" to 2.0": <u>0.2"</u>
Erase center	Setting this to ON makes it possible to always perform erase center even without setting center border in advanced copy. In addition, the center erase width default value can be set.	<ul style="list-style-type: none"> ● Erase center specification <u>ON</u>, <u>OFF</u> ● Setting the erase center width default value Center width 0.1" to 2.0" : <u>0.1"</u>

*Underlined items are the factory default.

Other settings list

Function	Description	Setting
Separator line width	The width of the printed separator line can be set when setting the separator line for combine copy or repeat.	0.01" to 0.05" : <u>0.01"</u>
Last job hold time	This sets the length of time for which the previously copied job is stored in memory. Setting the setting to 0 minute will prevent a document from being stored in memory and prohibit this feature.	0 to 600 min: <u>0 min</u>
Scan compression mode	The scanned image can be compressed and stored in memory. More document sheets can be stored in memory by setting the image compression mode to HIGH. (This slows down the scan speed.)	<u>NORMAL</u> , HIGH
Copy reservation	The next document can be scanned while the current document is being copied. Setting this to [OFF] will prohibit scanning of the next document.	ON, OFF

*Underlined items are initial settings at shipment.

FAX

Before Transmitting

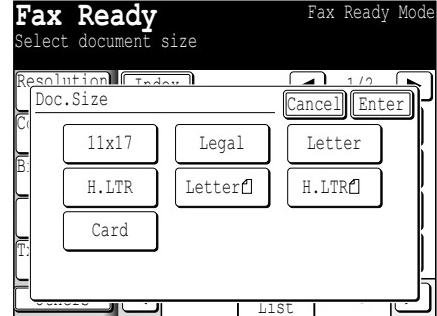

Automatic document size detection

- Both the ADF and the document glass can automatically detect 11"×17", Legal (14"×8.5"), Letter (11"×8.5"), Letter[□] (8.5"×11"), Half-letter (8.5"×5.5"), and Half-letter[□] (5.5"×8.5") sized documents.
- Half-letter size documents are transmitted as Letter size documents. (There will be a blank area on the received document.)
- When setting Rotate Tx, Letter[□] can be transmitted as Letter. (see page 3-196)

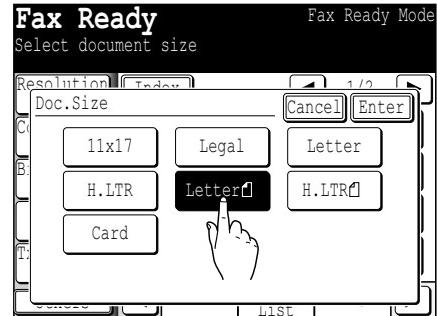

When automatic document size detection cannot be done

When the size of the document on the document glass cannot automatically be detected (when it is a custom document, incorrectly placed on the document glass, etc.), specify the document scan size before transmission.

- 1 When the document size cannot be automatically detected, this screen will be displayed.

- 2 (1) Select the document size.
(2) Press [Enter] to begin scanning the document.

Setting the TTI

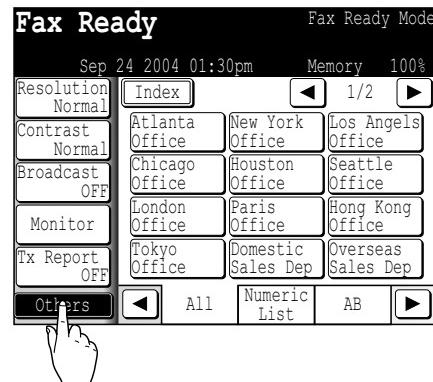

Three types of TTI's can be set in the User Install settings. These TTI's can be selected for each transmission.

Reference

Refer to TTI setting on page 1-56.

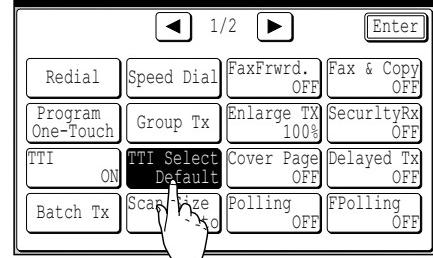

1 Press FAX.

2 Press [Others].

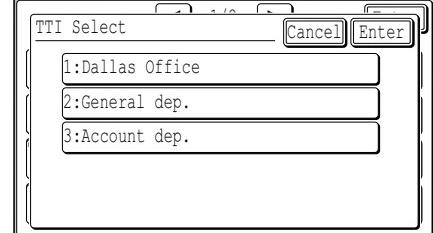

3 Press [TTI Select].

Fax Functions
Select item to edit.

4 (1) Select the TTI.
(2) Press [Enter].

Fax Functions
Select the TTI that will appear
on the header and select [Enter].

Note

Press **RESET** to cancel the settings.

5 The display returns to the screen
in step 3. Press [Enter].

6 Send the fax.

Appendix

Transmission resolution/contrast setting

Select the transmission resolution/contrast to match the document and text.

■ Transmission resolution

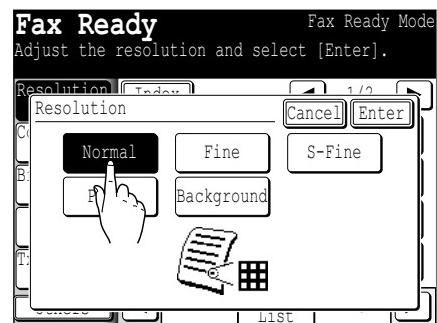

1 Press [Resolution].

Note

- [S-Fine] might not always be supported by the receiving machine.
- A longer transmission time is required for each increasing level of resolution from standard mode to photo mode.

Reference

- The resolution default value can be changed. For the details of changing default, refer to “Transmission default settings” on page 3-192.
- The resolution for [S-Fine] can be changed. For the details, refer to “Other Settings” on page 3-196.

2 (1) Select the desired resolution.

- Normal

When transmitting a document with standard print

- Fine

When transmitting a document with fine print (newspaper, etc.)

- S-Fine

When transmitting a detailed illustration or fine text (dictionary text)

- Photo

When transmitting a photograph

- Background

When transmitting a document with suppressing the background, such as patterns

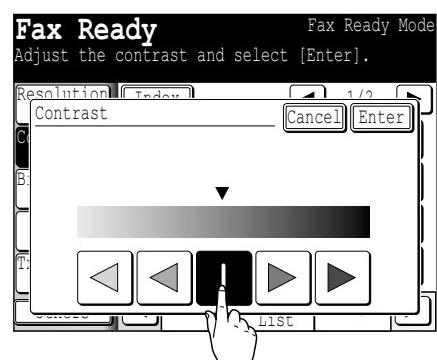

(2) Press [Enter].

■ Contrast

1 Press [Contrast].

Reference

- The contrast default value can be changed. For the details of changing default, refer to “Transmission Default Settings” on page 3-192.

2 (1) Select the desired contrast.

The contrast can be selected from 5 levels to match the document.

- Darkest

To scan at the darkest contrast

- Darker

Between darkest and normal

- Normal

For normal documents

- Lighter

Between lightest and normal

- Lightest

To scan at the lightest contrast

(2) Press [Enter].

Transmission method settings (Memory transmission/Real time transmission)

There are two types of automatic transmissions. Memory transmission is when a transmission begins after the document is scanned, and real time transmission when a transmission begins while the document is being scanned. Memory transmission is set at the time of purchase, but when Memory transmission is set to OFF, one transmission can be specified for real time transmission.

● Real time transmission

Real time transmission directly transmits the document to the other faxmachine without scanning the document into memory. Transmission begins immediately after the transmission operation is completed to allow you to confirm that the other machine has received the transmission.

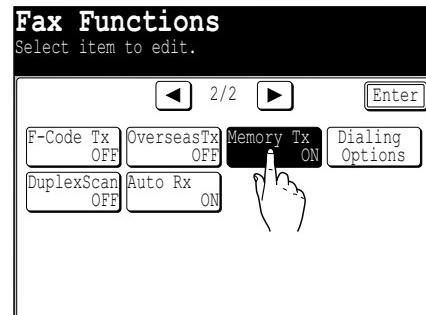

● Memory transmission

Memory transmission transmits the document after scanning the document into memory. This allows you to take the document and leave without waiting for the transmission to end to save time. For Memory transmission, when the image is corrupted by line trouble, etc., the affected page is automatically resent.

1 Press FAX.

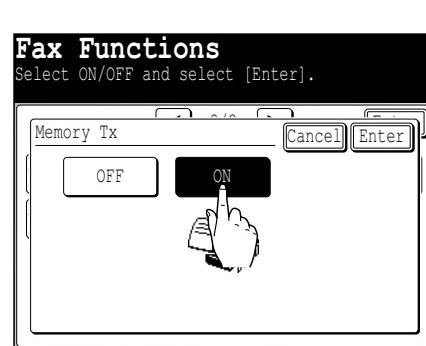

2 Press [Others].

3 (1) Press [\blacktriangleleft] or [\triangleright].
 (2) Press [Memory Tx].

4 (1) Press [ON] or [OFF].
 (2) Press [Enter].

5 (1) Press [Enter] again to return to the standby screen.
 (2) Set the document and perform the transmission operation.

Note

ON..... Memory Tx
OFF ... Real time Tx

Note

Press **RESET** to cancel the settings.

In this case

Transmitting from the document glass will cause the memory to overflow.

Real time transmission is not possible from the document glass. Even if real time transmission is set, the machine will automatically switch to Memory transmission. The memory may overflow depending on the document. In this case, copy the document and send it by real time transmission using the ADF.

Quick memory transmission

When sending multiple documents, transmission begins shortly after the first page is scanned. This greatly reduces the total working time when sending a large amount of documents.

Note

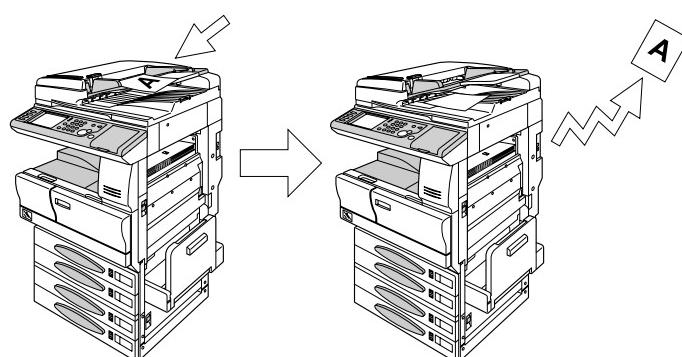

Quick Memory Tx is set to ON by the factory default. (see page 3-196)

Quick Memory Tx

Transmits while scanning

Memory Tx

Transmits after scanning is completed

Dialing symbols

Inserting the dialing symbols when entering the receiver's number allows a variety of functions to be added. Dialing symbols can also be used when setting speed-dial.

Key name	Touch screen display	Functions and applications
Pause	/P	This is used to open the space between dials. (Ex.) 075-111-2222/P123 #
Tone	/T	This is used when you want to transmit a tone when connecting to the dial line. (Ex.) 075-111-2222/T123 #
Pre Fix	/N	Enter a "Dial Prefix" to access an alternative phone network, "/N" must be entered to the first of number. For how to register and use a Dial Prefix, refer to page 3-137.

Overseas setting

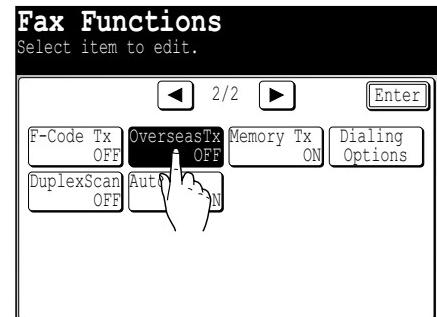

When transmitting overseas, the transmission reliability can be improved.

1 Press FAX.

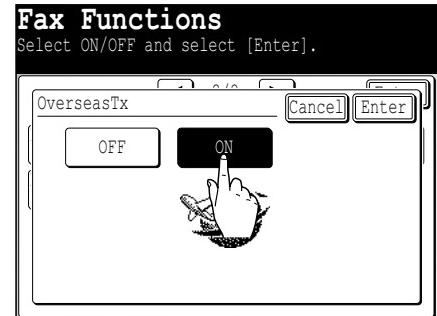

2 Press [Others].

3 (1)Press [\blacktriangleleft] or [\triangleright].
(2)Press [OverseasTx].

4 (1)Select [ON] for overseas transmission.
(2)Press [Enter].

5 The display returns to the screen in step 3. Press [Enter].

Note

Press **RESET** to cancel the settings.

Note

When the transmission is completed, the overseas setting returns to OFF.

6 Enter the fax number, and send the fax.

Transmitting using one-touch key

There are 48 one-touch keys, 01 to 48. One-touch keys 01 to 48 correspond to speed-dial 001 to 048. For example, the location registered for one-touch 01 is the same as the location entered for speed-dial 001.

1 Load the document.

2 Press **FAX**.

Note

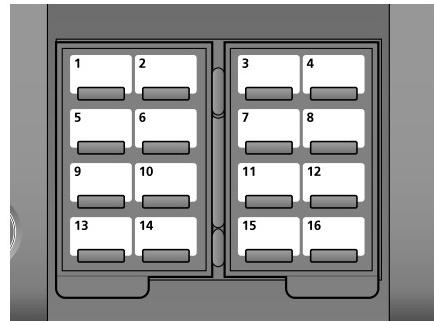

Press **RESET** to cancel the settings.

Reference

- Location can be entered for unregistered one-touch keys. (see page 3-166)
- Before pressing a one-touch key, press [**Broadcast**] located in the Soft Key to allow multiple locations to be specified consecutively. (Press **START** to transmit.)

3 Set the resolution and contrast as necessary.

4 Press the one-touch key registered as location.
The document will be scanned and transmission will begin.

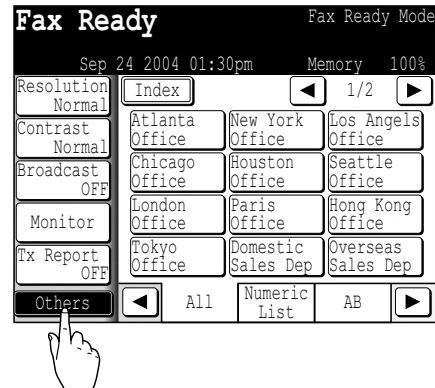

Transmitting using speed-dial

1 Load the document.

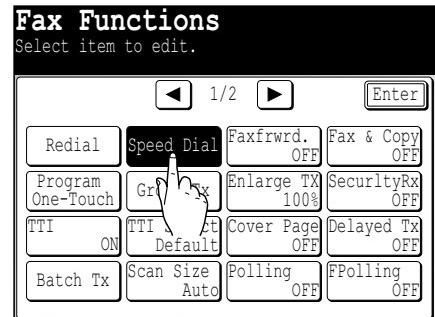

2 Press **FAX**.

3 Set the resolution and contrast as necessary.

4 Press [Others].

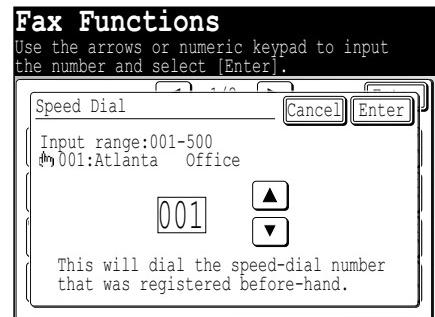

5 Press [Speed Dial].

Note

- The numbers registered in speed-dial 001 to 048 are the same as one-touch numbers 01 to 48.
- Press **RESET** to cancel the settings.

6 (1) Use **[▲]** **[▼]** or the numeric keypad to enter the speed-dial No. (001 to 500).
(2) Press **[Enter]**.

7 Press **START**.
The document will be scanned and the transmission will begin.

Transmitting using address book

Address Books displays the registered speed-dial list in the registering order, the alphabetical order or by groups in the touch screen. From the Address Book you can select the location from a list of registered Dials or select the location by alphabetical or group listing.

**Index**

This displays the tabs in a list.
In this case (see page 3-17)

Location list

This displays the registered locations. The displayed contents differ depending on the tab.

Tab change cursor

Press this to change the tabs when there are multiple tabs.

Tab

The registered locations are classified by category. Pressing a tab displays the classified locations.

■ All

This displays all of the registered speed-dials in the shape of button according to the registering order.

Note

Up to 500 speed-dials can be registered. The numbers registered in speed-dial 001 to 048 are the same as one-touch numbers 01 to 48.

- 1 Load the document.

- 2 Press **FAX**.

- 3 Set the resolution and contrast as necessary.

- 4
 - (1) Press **[ALL]**.
 - (2) Press the page change cursor **[◀] [▶]** to display the specified location.
 - (3) Press the location you want to specify.
The document will be scanned and transmission will begin.

Note

Before selecting the location press **[Broadcast]** located in the Soft Key to allow multiple locations to be specified consecutively. (Press **START** to transmit.)

Page change cursor
Press this to change the page.

Page number
This is the page number of the list display that is currently displayed.

Location

■ Numeric list

The registered speed-dials are displayed in the speed-dial number order. The location can be directly specified from the touch screen. There are 100 pages in the speed-dial listing with each page holding 5 numbers.

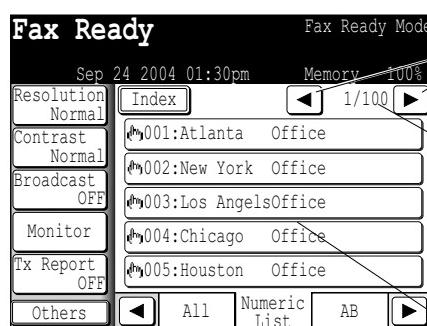

Note

Up to 500 speed-dials can be registered. The numbers registered in speed-dial 001 to 048 are the same as one-touch numbers 01 to 48.

- 1 Load the document.
- 2 Press **FAX**.
- 3 Set the resolution and contrast as necessary.
- 4 (1)Press [**Numeric List**].
 (2)Press the page change cursor [**◀**] [**▶**] to display the specified location.
 (3)Press the location you want to specify.
 The document will be scanned and transmission will begin.

Note

Before selecting the location, press [**Broadcast**] located in the Soft Key to allow multiple locations to be specified consecutively. (Press **START** to transmit.)

Page change cursor
Press this to change the page.

Page number
This is the page number of the number order display that is currently displayed.

Location
This is a list of the location registered in speed-dial. 5 destinations are displayed at a time.

■ Alphabet

When you register the names in a speed-dial location, the location names are classified in alphabetical order.

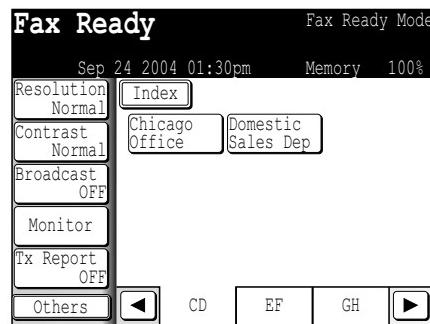

Note

Classification is not performed when the location name is not registered. In addition, an alphabet tab will not be displayed unless a recipient is registered under that classification.

- 1 Load the document.
- 2 Press **FAX**.
- 3 Set the resolution and contrast as necessary.
- 4
 - (1) Press the tab containing the name of location that was registered when the one-touch key/speed-dial was registered.
 - (2) Press the location.
The document will be scanned and transmission will begin.

Note

- Before selecting the location, press [**Broadcast**] located in the Soft Key to allow multiple locations to be specified consecutively. (Press **START** to transmit.)
- Press the Tab change cursor to change the tab.

Redialing

There are two types of redials; "Manual Redial", which is performed by operating the machine, and "Automatic Redial", for which the machine automatically decides to redial when transmission is not possible because the receiving line is busy.

Note

Redial is not performed when the transmission was made using the optional handset

Note

Up to 40 digits can be stored per phone number.

Reference

How to load document
(see page 1-42)

■ How to redial manually

The locations for the last 10 fax transmissions and phone calls are kept in memory.

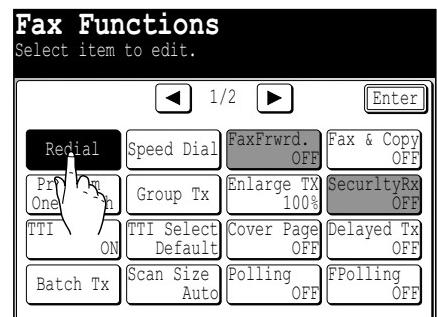

1 Load the document.

2 Press **FAX**.

3 Press **[Others]**.

4 Press **[Redial]**.

Note

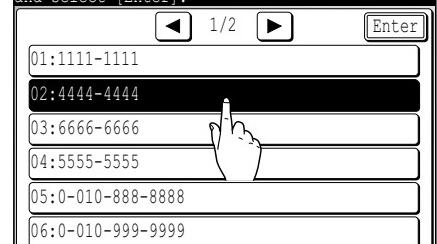

- For redial, only the number to be redialed is displayed. Names of receiving party registered in speed-dial are not displayed.
- Press **RESET** to cancel the settings.

5 (1)Select the phone number to be redialed.

(2)Press **ENTER**.

Redial

Select the number to redial and select [Enter].

6 Press **START**.

Reference

The auto redial frequency and interval can be set from 2 to 15 times, from 1 to 5 minutes respectively. (see page 3-196)

Note

- For the details of the redial cancel, refer to page 3-28.
- When a real time transmission was made, the redial is cancelled when the document is removed.
- The redial default setting is twice at 1-minute interval.
- Redial cannot be performed during real time transmission.

Note

Press **RESET** to return to the standby screen.

■ Automatic redial

When transmission was not successful during automatic transmission because the line was busy, "Auto Redial" will be displayed and the number is automatically redialed.

If transmission was not possible even after the set number of redials were performed, the message at right is displayed. The check message will be printed. Check the message and transmit again if necessary.

Memory overflow

When the memory overflows full during document storage, the following message is displayed.

- When using quick memory transmission
- Check Message is printed with the page number in which the memory overflowed.
- Wait until space clears in the memory or use real time transmission to retransmit the document from the printed page number.

- When using memory transmission/document storage
- *This is the same as when quick memory transmission is set to OFF.
- Press [Yes] to transmit only the document stored in memory.
- Press [No] to delete the document stored in memory.
- If nothing is pressed, the machine will automatically delete the file in three minutes.

Transmitting manually

Use this method when the other fax machine uses manual reception, or when you transmit after finishing the phone conversation.

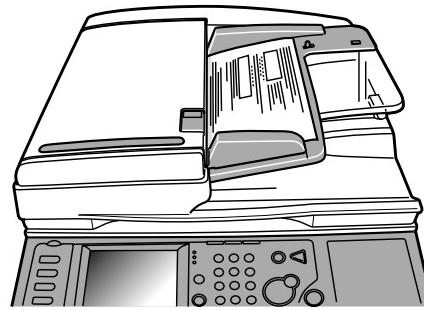

Operating tips

- The optional handset is required when picking up the handset to send the transmission.
- Manual transmissions cannot be sent from the document glass.

Reference

How to load document
(see page 1-42)

1 Place the document in the ADF.

Note

Check to make sure you hear a dial tone.

Changing Document Scan in Mid Scan (Mixed Transmission)

The document glass or the ADF can scan the document. Both scanning devices can be used in combination, such as for a cover page and map, and transmitted at the same time.

Operating tips

Basics for scanning the next document

- To scan the next document, set the Next Doc setting to “Yes” while scanning the current document.
- The ADF’s default setting for Next Doc is “No”. To have the next document scanned, press “Yes” while scanning the current document.
- For the document glass, the default setting for Next Doc is set to “Yes”.
- If you set Next Doc to “No” during scanning, the transmission will begin after scanning is completed.

ADF → Document glass

Cancelling/Checking the Communication Document

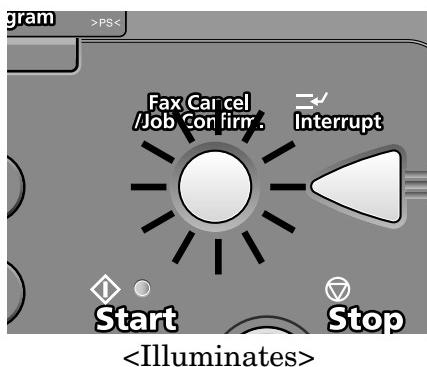

Use the following operation to check the status (delayed commands) after the document has been scanned. It can also be used to check the latest communication results after communication has been completed.

FAX CANCEL/JOB CONFIRM

If there is a document with delayed commands, **JOB CONFIRM** will illuminate.

Note

If there is no document with delayed commands, **FAX CANCEL/JOB CONFIRM** will not illuminate.

Cancelling/Reviewing communication document

The operation differs depending on whether or not a document is currently being transmitted.

Note

For details of canceling the group transmission and broadcast transmission in progress, refer to "Canceling/Checking broadcast transmission by location" in the following section.

- 1 Press **FAX CANCEL/JOB CONFIRM**.

If a document is being communicated, proceed to step 5.

2 Press [Delayed Commands].

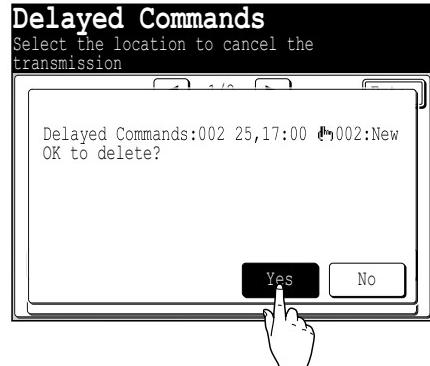

3 The communication reserved document will be displayed.

4 To cancel the communication, select the communication document to be canceled.

5 Press [Yes]. The selected communication document is deleted.

6 Press [Enter] to return to the list of communication reserved document.

Note

- The communication reserved documents will be displayed in chronological order. Press [**<>**] to change the screen.

Note

- [**BrdCast**] will be displayed for Group Transmission and Broadcast Transmission.

Note

- If the selected communication document was currently being communicated, communication will be canceled.
- Press **RESET** to return to the standby screen.
- When a "BrdCast" communication document is deleted, all of the broadcast locations are deleted. The destinations specified for the broadcast cannot be individually deleted.

Cancelling/Reviewing broadcast transmission by location

- In broadcast transmission, you can check the broadcast location or delete the specified location.
- You cannot cancel the location individually for the reserved document such as with delayed transmission, but for the current transmitting documents.

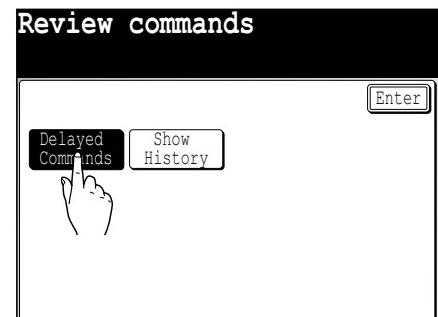

The operation differs depending on whether or not a document is currently being transmitted.

1 Press FAX CANCEL/JOB CONFIRM.

If a document is being transmitted, proceed to step 5.

2 Press [Delayed Commands].

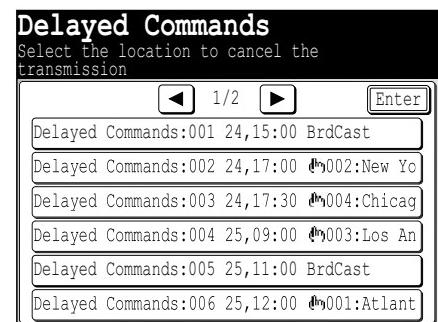

Note

- The currently communicating document will be displayed first. ("In Progress" will be displayed.)
- The communication reserved documents will be displayed in chronological order. Press [**◀** **▶**] to change the screen.

Note

- [**BrdCast**] will be displayed for Group Transmission and Broadcast Transmission.

3 The communication reserved document will be displayed.

4 To cancel the communication, select the broadcast transmission to be canceled.

*"BrdCast" is displayed.

- 5 Press [Yes] to cancel the transmission.
Press [No] to exit after checking.

**Note**

You can cancel the location individually only for the current transmitting documents.

■ To cancel specified location**(1) Press [Detail].**

*Each location specified by broadcast transmission will be displayed.

● Reserved

Location which has not yet been called.

● In Progress

Location which is currently communicating.

● Completed

Location which communication has finished.

● Deleting

Displayed until the deletion is actually completed.

● Deleted

Location which was deleted in the deleting screen.

● Redial

Location which is waiting for redial.

Receiving Faxes

Auto receiving mainly for fax (Fax ready mode)

Operating tips

- Use the Reception Mode at the User Install setting to set the machine to Fax Ready Mode. (see page 1-54)
- The handset is an optional component. (see page 1-13)
- The machine can be set to ring even if a handset is not installed. (see page 4-35)

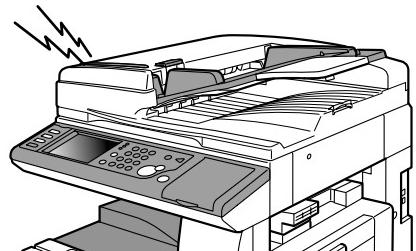

Note

You can pick up the handset while the machine is ringing to talk on the phone.

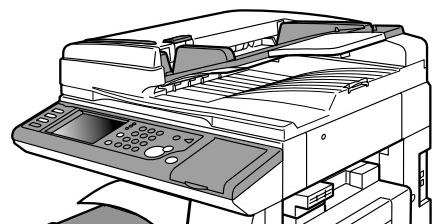

Reference

- To make the machine ring, you need to make the settings for the handset or the fax ringer on the machine. (see page 4-35)
- The number of rings can be changed from 1 to 10. (see page 3-196)

1 Your machine rings.

2 Fax reception will begin.

In this case

To change the number of rings...

The number of rings can be set from 1 to 10. You can make it easier to answer the phone by increasing the number of rings to extend the time until the fax answers the phone. For the details of setting method, refer to page 3-196.

Receiving a phone call with priority given to fax (Fax/Tel ready mode)

Operating tips

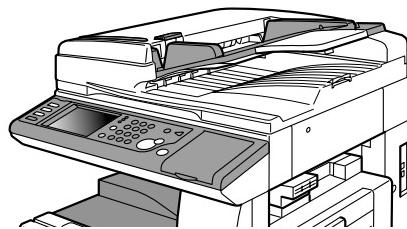

- Use the Reception Mode at the User Install setting to set the machine to “Fax/Tel Ready Mode”. (see page 1-54)
- Remains in the fax reception mode for a while after a call comes in. Therefore when it is a phone call, the calling party is made to wait, and the phone call is charged to them.
- The optional handset is required to answer phone calls. (see page 1-13)

Note

- The machine might ring at fax reception depending on the other fax machine.
- The machine returns to the standby screen when reception is completed.

■ Receiving faxes

- 1 Fax reception will start immediately without ringing.

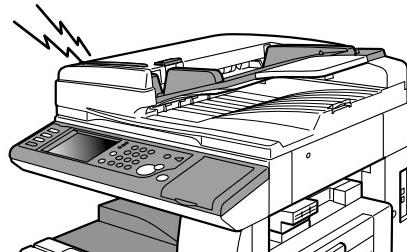

Note

- The continuous ringing means the caller is making a phone call to you.
- For frequent callers, let them know in advance that it will take time to answer the phone.
- The caller will already have been kept waiting for a while before the machine rings, so try to answer the phone as quickly as possible.
- Additionally connected phones will not ring.

■ Answering phone calls

- 1 Your machine will shortly delay the ringing after reception.

Note

- When you hear fax tones (“beep-beep-beep”), it is a fax call coming in. When you answer the call using the handset, press **START**.
- When you answer the call using an additionally connected phone, press the machine’s **START** on the control panel to begin reception. (Hang up the handset after reception.)

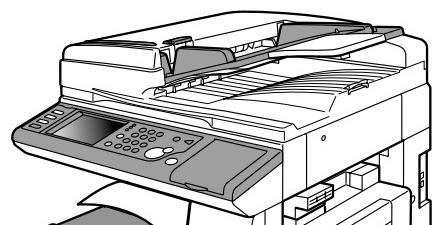

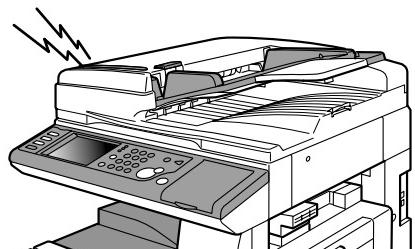

2 Answer the call.**Auto receiving with priority given to the phone (Tel/Fax ready mode)****Operating tips**

- Use the Reception Mode at the User Install setting to set the machine to “Tel/Fax Ready Mode”. (see page 1-54)
- When you have a phone call and the number of rings exceeds two times, the fax will be in the reception mode. Therefore the phone call is charged to the caller even if you are not in.
- The optional handset is required to answer phone calls. (see page 1-13)

■ Receiving faxes

Reference

- To make the machine ring, you need to make the settings for the handset or the fax ringer on the machine. (see page 4-35)
- The number of rings can be changed from 1 to 10. (see page 3-196)

2 Fax reception will begin.

■ Answering phone calls

Note

- You can pick up the handset while the machine is ringing to talk on the phone.
- Additionally connected phones will not ring.

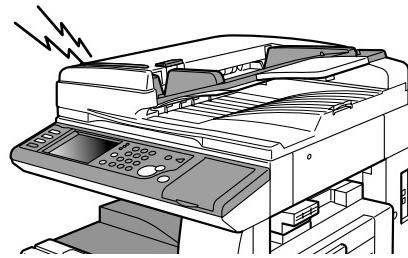

Reference

- To make the machine ring, you need to make the settings for the handset or the fax ring-er on the machine. (See 4-35)
- The number of rings can be changed from 1 to 10. (see page 3-196)

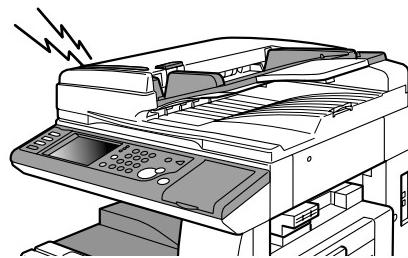

Note

The continuous ringing means the caller is making a phone call to you.

1 Your machine rings.

2 Your machine rings again. (approx. 30 seconds after the first ring)

3 Answer the call.

Note

- When the caller is sending a manual transmission, there might be no sound when you pick up the handset, so confirm on the phone if no one is on the line before pressing **START**.
- When you hear fax tones (“beep-beep-beep”), it is a fax call coming in. When you answer the call using the handset, immediately press **START**.
- When you answer the call using an additionally connected phone, press **START** on the control panel to begin reception. (Hang up the handset after reception.)

Appendix

Using both the answering machine and fax (Ans/Fax ready mode)

Operating tips

- Use the Reception Mode at the User Install setting to set the machine to "Ans/Fax Ready Mode". (see page 1-54)
- Connect the answering machine connection cord to the fax's "Phone 2" connection.
- To make the machine ring, you need to make the settings for the handset or the fax ringer on the machine. (see page 1-13, page 4-35)

■ Receiving faxes

- 1 The answering machine rings for a predetermined number of times.

- 2 The answer message is played.

- 3 Fax reception will begin.

Note

- The automatic answering machine/fax switch might not work depending on the type of answering machine.
- Automatic reception might not be possible depending on the other fax machine.
- When the answering machine does not operate such as because the message memory is full, the fax cannot be received.

■ Answering phone calls

- 1 The answering machine rings for a predetermined number of times. (Within 2 rings)

- 2 The answer message is played. (Within 10 seconds)

Note

When the caller is manually transmitting, the answering machine will pick up and play the answering message before the machine switches to the fax, so please include instructions for the calling party to "press start on your machine to transmit the fax" in the answering message.

Note

- If silence continues for 10 seconds, the machine will switch to fax reception.
- Fax reception is possible after recording a message.

- 3 Answering machine starts recording a message.

Primarily using the phone (Tel ready mode)

Starts reception after picking up the handset to check the other party.

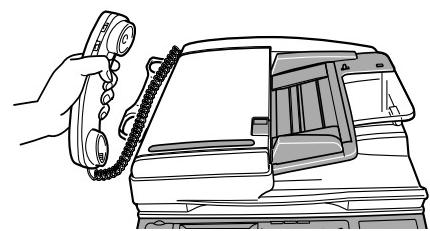

Operating tips

- The optional handset is required. (see page 1-13)
- Use the Reception Mode at the User Install setting to set the machine to "Tel Ready Mode". (see page 1-54)
- If there is a document in the ADF, the transmission will start by pressing **START**. Make sure there are no documents in the ADF.

Note

If it is a phone call, you can start the conversation.

- 1 Pick up the handset when the machine rings.

Note

If it is a fax reception, you will hear fax tones ("beep-beep-beep") or no sound.

- 2 Answer the call.

Note

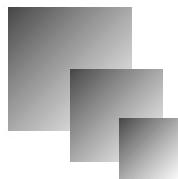

- Check the caller's request, and then press **START** to hang up the handset.
- When the caller is manually transmitting, there might be no sound when the handset is picked up, so confirm on the phone if no one is on the line before pressing **START**.
- When you hear fax tones ("beep-beep-beep"), it is a fax call coming in. When you answer the call using the handset, press **START**.
- When you answer the call using an additionally connected phone, press **START** on the control panel to begin reception. (Hang up the handset after reception.)

Operations during Reception

Display during reception

The other machine's name or number is shown in the display and is printed out on each received page. The Communicating lamp illuminates until the communication has been completed.

<When received while in the Fax Standby screen>

Note

- Do not pull out the paper cassette during printing. Doing so could cause a paper jam.
- The paper output tray can hold up to 250 sheets. Be sure to prevent too much paper from accumulating. Too much accumulated paper could cause output problems or paper jams.
- The other party is displayed with the following priority. 1. TTI registered in the Receiving party. 2. TTI number registered in the Receiving party.
- Reception is canceled when the memory overflows during reception. Contact the other party and ask them to transmit again.

Out-of-paper reception

Out-of-paper reception is the function that stores the received document in memory when it cannot be printed because the paper runs out or a paper jam occurs. When you solve the problem, the stored documents will be printed automatically. While an out-of-paper reception document is stored in memory, the **MEMORY RECEIVE** lamp will remain illuminated.

Note

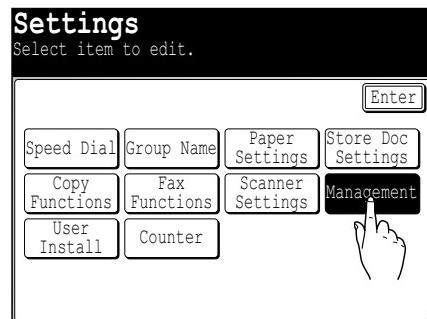

- Leave the machine power ON when replacing paper and toner.
- The memory can receive and hold a maximum of 250 communications and approximately 2,533 A4 size Muratec standard documents (standard 32MB memory) (approx. 5,263 documents when the optional 64MB expansion memory is used), but it varies depending on the amount of memory used.
- When the memory overflows during out-of-paper reception, the fax reception will be canceled and an error message is displayed. When you solve the problem, the part of the received document stored in memory will be printed. Contact the other party and ask them to transmit again.
- When the power shuts off during out-of-paper reception, the contents stored in memory will be preserved for approximately 34 hours (standard 32MB memory). However, the power must be on for 48 hours in advance. For the optional 64MB expansion memory, this time is approximately 17 hours.

● ■ Checking the out-of-paper reception copy print queue

The out-of-paper reception document print queue status can be checked.

1 Press **SETTING**.

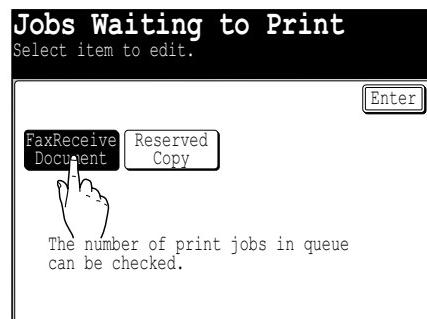

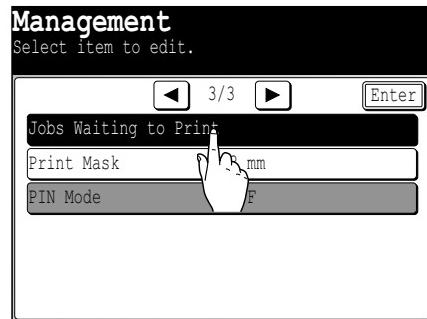

2 Press **[Management]**.

3 (1)Press [**◀**] [**▶**].

(2)Press **[Jobs Waiting to Print]**.

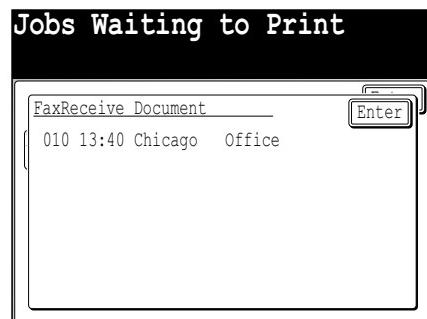

4 Press **[FaxReceive Document]**.

Note

- Press **RESET** to return to the standby screen.
- The waiting print job in out-of-paper reception will be automatically printed when the printing is available.

5 This displays the intercepted reception print queue status.

Appendix

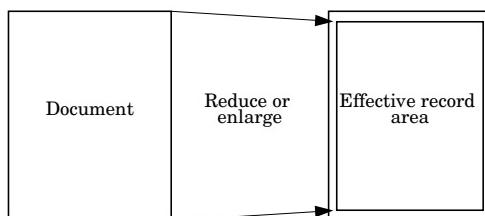

Recording

Effective record area

Printing is not possible on the approximately 0.12 inch around the edge of the paper. For this reason, the received contents are reduced in size or cut off during printing. The printable area is called the effective record area.

Reference

The blank margin around the paper can be changed. (see page 4-37)

Reduction margin

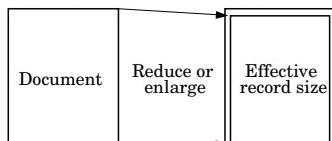

The reduction margin is the value that determines whether to cut off an edge or reduce the contents to fit on one sheet when the received document will not fit in the effective record area. When a document that is longer than the loaded paper is received, only the blank margin might be printed on the next page, which can be prevented by setting the “reduction margin”. When the document length exceeds the effective record area but is within the reduction margin, reduction or cut off is performed to fit the contents onto one sheet, but when the document is longer than the reduction margin, the page is divided onto other sheets.

Reference

The reduction margin has the range of 0.0 to 3.3 inches, so set it to match the margin length of the most frequently received documents. For details of the reduction margin setting, refer to “Other settings list” on page 3-196.

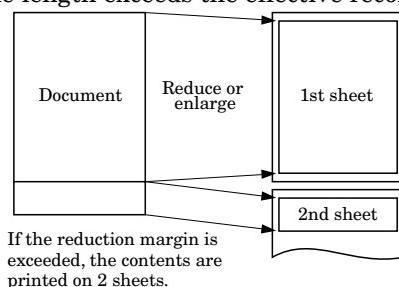

(1) When a reduction margin is set

If the length exceeds the effective record area but is within the reduction margin, the contents are reduced or cut off to fit onto one sheet.

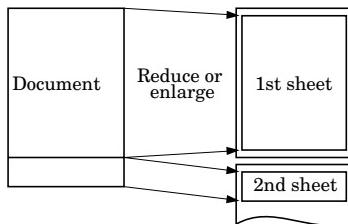

(2) When a reduction margin is not set (when Reduction Margin = 0)

If the length exceeds the effective record area even by a little, the contents are printed on 2 sheets.

Page division

When the portion that exceeds the effective record area is larger than the reduction margin, the page is divided and printed on multiple sheets.

Half-page reception

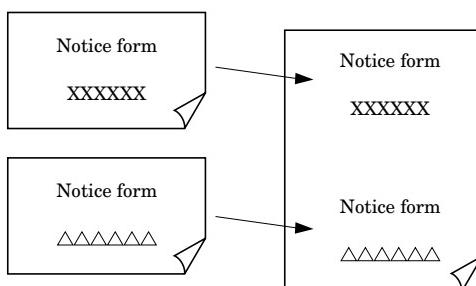

The machine can be set to print 2 pages on 1 sheet when 2 pages of a document comparable to a Half-letter[□] are received consecutively.

*When the Reception reduction rate is set to “Auto”, the pages of the received document will be automatically reduced to 1/2 the length of the paper (effective record area) to fit onto 1 sheet, so the reduction rate of the pages may vary even when printed on the same sheet.

*When a document that is larger than the Half-letter[□] size is received, and the size of the portion that exceeds the Half-letter[□] size is larger than the reduction margin, Half-page reception is not performed.

*For details of the half-page reception setting, refer to “Other settings list” on page 3-196.

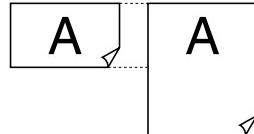

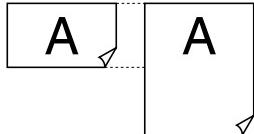

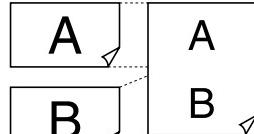

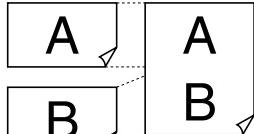

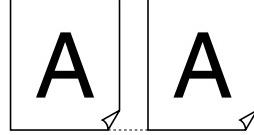

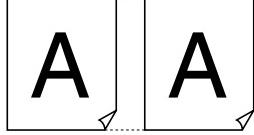

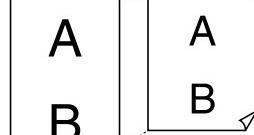

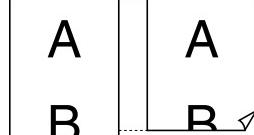

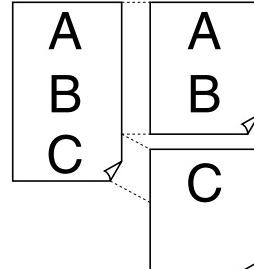

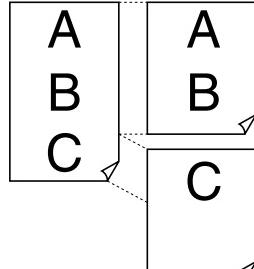

*The printing method differs depending on the set reception reduction rate and the size of the received document. For details, refer to “Recording list” on page 3-52.

Rotated reception

- The width and length of the received document are automatically measured and the most appropriate paper that is loaded is selected.
- If the orientation of the received document and the loaded paper is different, the received document will be automatically rotated.

Recording list

Received document size		Reception reduction rate	Automatic	Fixed 100%
Small document (Half-letter 	When there is only 1 page			
		In original dimensions	In original dimensions	
	When there are 2 or more consecutive pages (When Half-page Rx = ON)			
		Reduced to 1/2 and merged onto 1 sheet	Merged onto 1 sheet keeping each original dimensions	
Regular size document (11"×17", Legal, Letter)				
		In original dimensions *Might be slightly reduced.	In original dimensions	
Rectangular document (A little longer than 11"×17", Legal, Letter)	When exceeding the effective record area but within the reduction margin			
		Reduced to fit onto 1 sheet.	At the original dimensions, the portion that does not fit on 1 sheet will be cut off.	
	When exceeding the effective record area and larger than the reduction margin			
		At the original dimensions, the portion that does not fit on 1 sheet will be printed separately on another sheet.	At the original dimensions, the portion that does not fit on 1 sheet will be printed separately on another sheet.	

Paper size priority

Normally, paper of the same size as the transmitted document is automatically selected for received documents. If paper of the same size is not available, the following priority will be used to select the paper. Out-of-paper reception will be performed when all the paper runs out. (see page 3-49)

Document size on transmission side	Paper priority							
11"×17"			→		→		→	
Legal			→		→		→

Making Phone Call

How to make a phone call

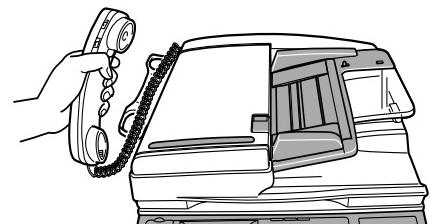

Operating tips

- The optional handset is required. (see page 1-13)

Note

When using [Monitor], press FAX to switch to the fax standby screen.

- 1 Pick up the handset. Or press [Monitor].

- 2 Specify the location.

- A. Numeric keypad

Press the numeric keypad or handset dial keys to enter the other party's number.

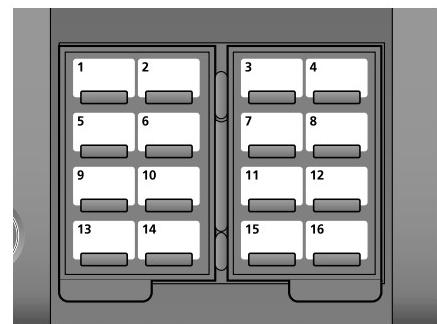

Note

One-touch keys 01 to 48 correspond to speed-dial 001 to 048.

- B. One-Touch key

Press the one-touch key if the receiving party is set in a one-touch key.

- C. Speed-Dial
 - (1) Press [**Speed Dial**].
 - (2) Use the numeric keypad or [**▲**] [**▼**] to enter the speed-dial number.
 - (3) Press [**Enter**].

**Reference**

For details of how to use the Address Book, refer to page 3-12.

Note

When [**Monitor**] is pressed, you can pick up the handset to talk.

- D. Address Book

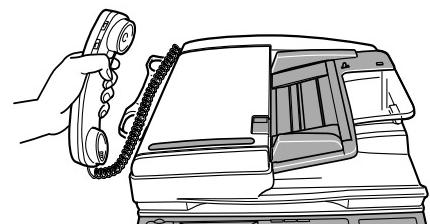

Specify the destination from the Address Book.
- 3 Talk to the other party when the connection is made.

How to receive a phone call

Note

You can receive the call with the machine's handset even if the power is turned OFF.

- 1 Pick up the handset when the machine rings.

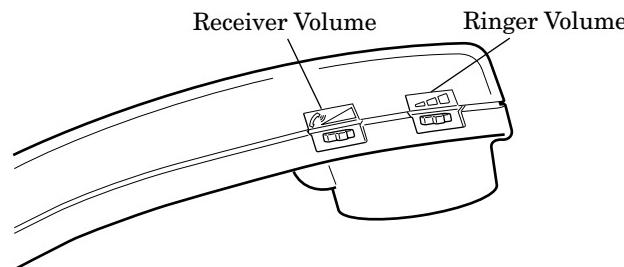

- 2 Answer the phone.

Adjusting volume

The small switches on the side of your machine's handset adjust the ringer volume and the receiver volume.

Ringer Volume Control Adjust the ringer volume to one of three settings: High, Medium, or Low.

Receiver Volume Control If it is hard to hear the remote person's voice, adjust the receiver volume to one of three settings: High, Medium, or Low.

Appendix

Transmitting Fax to Multiple Recipients (Broadcast)

This function enables you to send the same fax to many locations in one operation, thereby eliminating the need to scan and send the fax for each location.

Operating tips

- Up to 530 locations can be specified through a combination of speed-dials, groups and numeric keypad input.
- Up to 30 locations can be specified using numeric keypad input.

Interrupt communications

Broadcast communications can be interrupted while in progress and a separate communication performed. Performing a real time transmission (see page 3-5) or polling (see page 3-96) while a broadcast communication is in progress will interrupt the broadcast communication and run the transmission or polling prior to it. It is helpful when you need to send a fax or perform polling urgently. Polling will only take priority when performed for one destination.

Performing broadcast transmissions

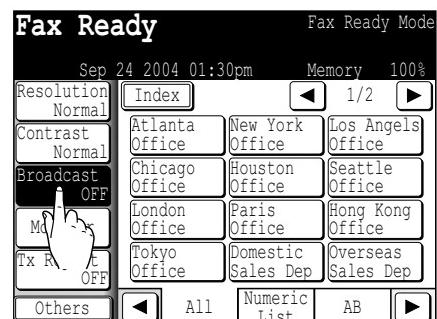

Reference

How to load document
(see page 1-42)

1 Load the document.

2 Press FAX.

3 Press [Broadcast].

Note

Press [**Enter**] after specifying the location using the numeric keypad.

Reference

Methods for specifying the location are as follows:

- Specify using the numeric keypad (see page 3-8)
- Specify using the one-touch keys (see page 3-10)
- Specify using speed-dial (see page 3-10)
- Specify using the Address Book (see page 3-12)

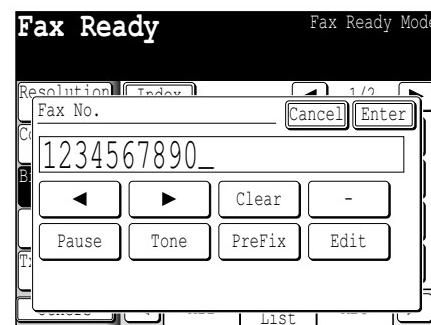

Note

- Press [**Location**] to review the selected location. For details, refer to “Reviewing and deleting selected locations” next page.
- If you specified the receiving party using the speed-dials, and the receiving party corresponding to the number input is already specified in the broadcast, “Already stored” will be displayed.

- 4** Input the fax number of the location.

Example:

When the numeric keypad is used to input the number

**Example:**

Select multiple destinations (receiving parties) when specifying receiving parties using the Address Book.

- 5** Repeat step 4, and input the remaining receiving parties.

- 6** Press **START**.

**Note**

- Press **RESET** to stop the transmission.
- Press **STOP** to stop the scanning.

Reference

After a document has been scanned, it can be deleted or checked using **FAX CANCEL/JOB CONFIRM**. (see page 3-28)

Reviewing and deleting selected locations

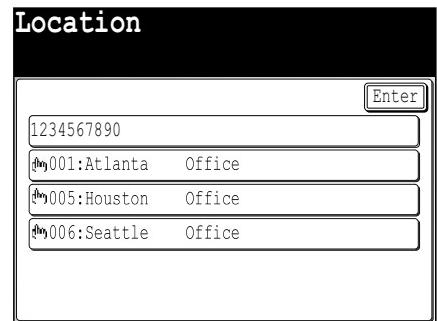

Note

You can review and delete the locations with this operation only in the case of step 4 for “Performing broadcast transmissions” (see page 3-58). If the transmission has started, refer to “Canceling/Checking the Communication Document” on page 3-28.

1 Press [Location].

2 The selected locations are displayed.

3 Follow the steps below to delete the selected locations.

- (1) Select the location you want to delete.
- (2) Press [Yes] to delete the selected location.
- (3) Back to the screen at step 2, repeat step 1 to 2 until you finish deleting all the unnecessary locations.

In this case

Using the Address Book to delete receiving parties....

For speed-dials, you can delete broadcast destinations by just pressing the corresponding receiving parties in the Address Book list.

Using groups (Group transmission)

By registering multiple locations into groups, you only need to load the document once to send the same fax to all location in the group selected.

Operating tips

To use this function, you will need to register the applicable group numbers when you entered the speed-dials beforehand. (see page 3-162)

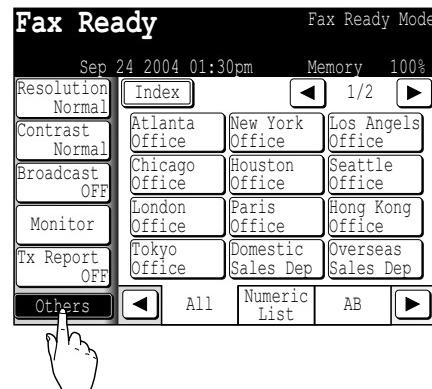

You can also register a name for each group. (see page 3-188)

Reference

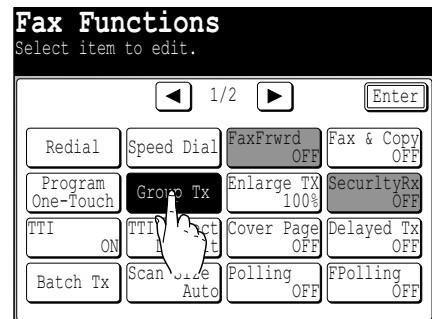

How to load document
(see page 1-42)

1 Load the document.

2 (1) Press **FAX**.
(2) Press [**Others**].

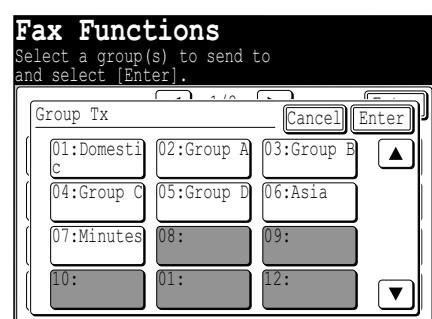

3 Press [**Group Tx**].

Note

- Press a group and it will be highlighted. Press it again to remove the highlighting and release the selection.
- Press **RESET** to cancel the settings.

4 (1) Select the group. You can also specify more than one group.
(2) Select [**Enter**].

Reference

After scanning a document, you can delete or check it using **FAX CANCEL/JOB CONFIRM**. (see page 3-28)

5 Press [**Enter**] to return to the standby screen. Press **START**.

Specifying Transmission Time (Delayed Transmission)

This function enables you to set the time and date for transmission. It will help you to save money if you send faxes early in the morning, late at night or any other time when phone charges are lower.

Operating tips

- You can specify a time and date up to a month ahead. The document for delayed transmission is stored in the memory until the specified time, at which point the transmission will start.
- If real time transmission is specified, the document will remain loaded until the specified time, so you will not be able to send any other faxes.
- This can also be specified in combination with other functions (broadcasts, polling, F-code transmissions, F-code polling, fax & copy).

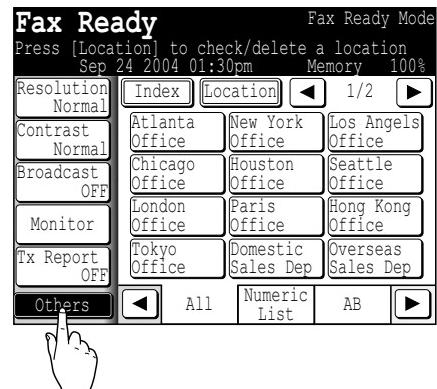

Reference

How to load document
(see page 1-42)

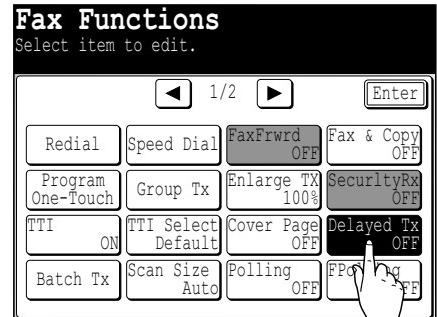

1 Load the document.

2 Press **FAX**.

3 Press **[Others]**.

4 Press **[Delayed Tx]**.

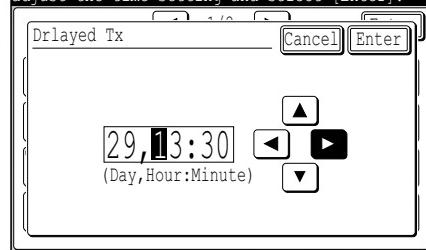

Note

Use [**▲**] [**▼**] or the numeric keypad to enter the sending time.

- 5** (1) Input the sending date and time. Times must be entered using the 24-hour format.
 (2) Press [**Enter**] twice.

Fax Functions

Use the arrows or numeric keypad to adjust the time setting and select [**Enter**].

**Note**

- When specifying multiple destinations, first press [**Broadcast**].
- Press **RESET** to cancel the settings.

Reference

Methods for specifying the location are as follows:

- Specify using the numeric keypad (see page 3-8)
- Specify using the one-touch keys (see page 3-10)
- Specify using speed-dial (see page 3-10)
- Specify using the Address Book (see page 3-12)

Note

To change the sending time after it has been set, you need to delete the scheduled transmission and reset it from the beginning.

Reference

After scanning a document, you can delete or check it using **FAX CANCEL/JOB CONFIRM**. (see page 3-28)

- 6** Specify the receiving party.

Forwarding Received Documents

Documents (faxes) received during a set timeframe can be forwarded to a specified destination. This is useful, for example, if you want to check faxes received in the office at home during non-office hours. Up to 10 forwarding conditions can be entered.

Operating tips

Faxes cannot be forwarded when the reception mode is set to "Tel ready mode". Make sure that you are using a reception mode other than "Tel ready mode".

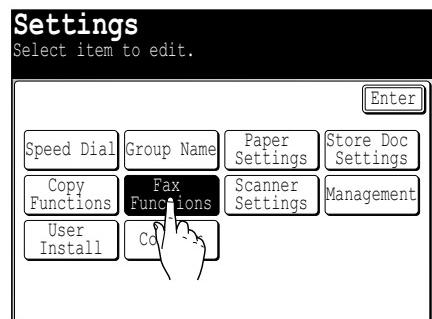

Entering forwarding conditions

Operating tips

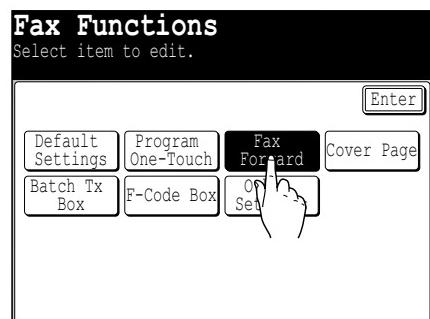

Enter the following contents.

- Individual..... Set this to ON to enable fax forwarding for each individual forwarding destination. If the overall fax forwarding setting is set to ON, forwarding will start when the setting time comes.
- Specified time... Forwarding starts when the setting time comes. If no time is entered, faxes will be forwarded regardless of what time it is.
- Auto Print..... If selected ON in Auto Print, the received document is printed out simultaneously at the forwarding machine and at the forwarded machine.

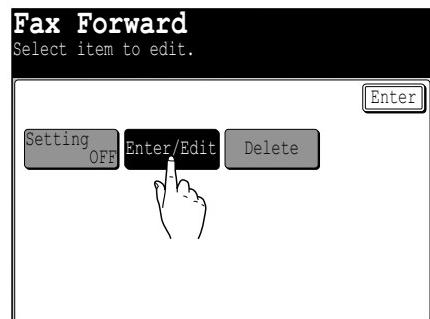

- 1 Press **SETTING**.
- 2 Press **[Fax Functions]**.

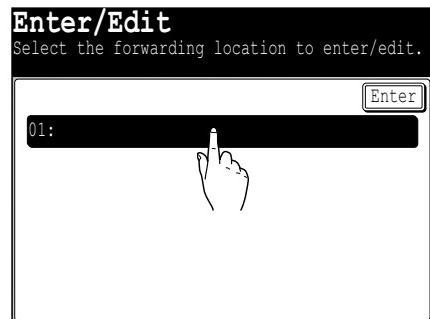

3 Press [Fax Forward].

4 Press [Enter/Edit].

5 Press the number in which to add a forwarding condition.

6 (1) Enter the number of the forwarding destination.
(2) Press [Enter].

Note

- Press [01:] when entering for the first time.
- To change forwarding conditions already entered, press the number you want to change.

Note

- Use the numeric keypad, Address Book, etc. for input.
- You can register multiple destinations. (up to 530 destinations: 500 speed-dials and 30 specified using the numeric keypad)
- Press [LOCATION] to review or delete the entered destinations. (see page 3-60)

Preventing Received Documents from Being Read by Others (Security Reception)

This enables all documents received after the security reception start time to be stored in memory without being printed out. This function is useful to store all documents received in memory at night, for example, when there is no one in the office. You can then print out received faxes later.

Operating tips

- Set the protect passcode in advance. (see page 4-36)
- When the protect passcode is deactivated, security reception is also deactivated.
- When security reception is set to ON, it will start at the specified time every day.
- If any documents are received during security reception, “Security Rx document exists” is displayed and the Memory Receive lamp illuminates. Once a document is printed out, the machine automatically returns to normal reception.

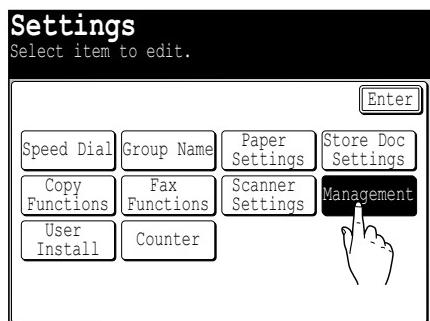

Security reception settings

Default: OFF

1 Press **SETTING**.

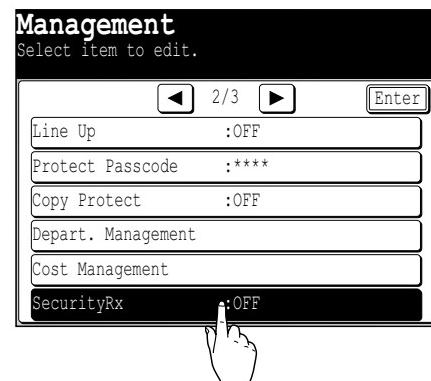

2 Press **[Management]**.

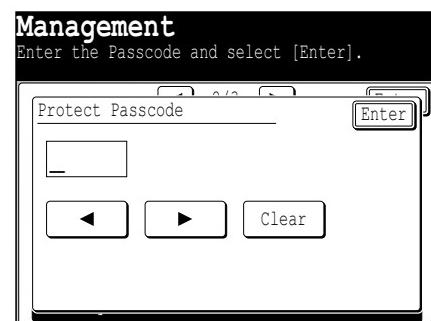

Note

You need to register the protect passcode in advance. (see page 4-36)

- 3** (1) Press [**◀**] or [**▶**].
 (2) Press [**SecurityRx**].

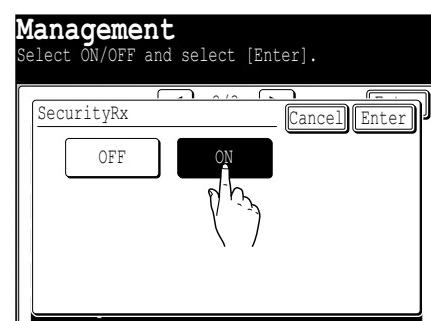

- 4** Use the numeric keypad to enter the protect passcode.

**Note**

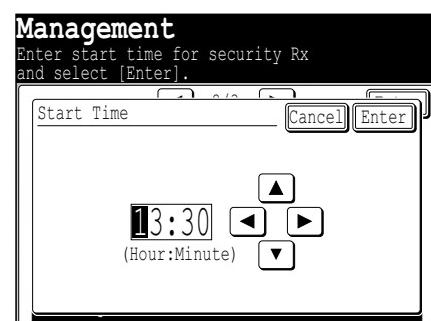

If [OFF] is selected, security reception is released and the system returns to the screen in step 3.

- 5** (1) Select [**ON**] to start security reception and [**OFF**] to release it.
 (2) Press [**Enter**].

**Note**

Press **RESET** to return to the standby screen.

- 6** If [**ON**] was selected in step 5, enter the start time.
 (1) Use the numeric keypad or [**▲**] [**▼**] and [**◀**] [**▶**] to enter the start time for security reception.
 (2) Press [**Enter**]. Security reception is now set.

Printing out security reception documents

After printing out documents received during security reception, the machine returns to normal operation.

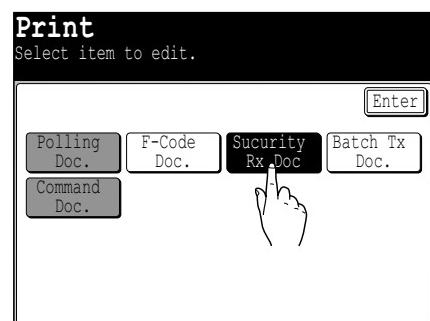

1 Press **SETTING**.

2 Press **[Store Doc Settings]**.

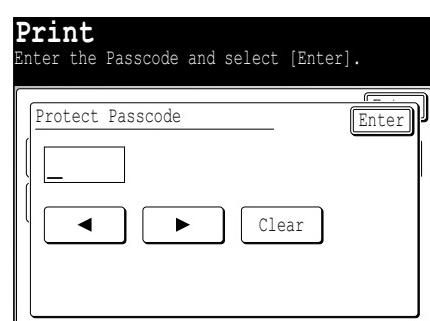

3 Press **[Print]**.

Note

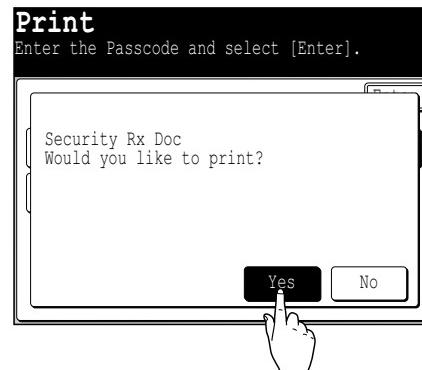

Press **RESET** to return to the standby screen.

4 Press **[Security Rx Doc]**.

5 Use the numeric keypad to enter the protect passcode.

- 6 Press [Yes] to print out documents received during security reception.

Note

- Printing out a document received releases security reception and the machine returns to normal operation.
- If no document has been received, "No document stored. Security Rx has been cancelled." appears and the display returns to the standby screen.

- 7 Received documents will now print out.

Performing F-Code Communications

What are F-code transmissions?

This function performs communications using a sub-address or password conforming to ITU-T (International Telecommunication Union) standards. By creating F-code boxes for which a sub-address or password has been entered, you can utilize security box communications, bulletin box communications and relay command communications regardless of the manufacturer or machine type.

Reference

Up to 20 F-code boxes can be entered. ("Registering F-code boxes", see page 3-100)

Note

Up to 30 documents can be stored in each box.

Sub-addresses and passwords

- Sub-addresses are numbers that distinguish the various F-code boxes that have been set in the memory. (Must be entered)
- A password is important to prevent documents from being sent/received by mistake. (Entered as necessary)

Appendix

Functions used with F-code communications

Utilizing sub-addresses and passwords enables you to use the following functions.

◆ F-code security box communications

When the other party for communications has an F-code security box set, F-code security communications can be performed by specifying the sub-address and the password (if necessary) for that box.

Unless the receiver of the security box communication inputs a specific I.D. code, the received document cannot be printed out, which is essential for sending highly confidential documents.

Reference

- F-code security box transmissions Transmissions using sub-addresses (see page 3-116)
- Receiving F-code security box communications ... Printing stored documents (see page 3-122)

◆ F-code bulletin box communications

When the other party for communications has an F-code bulletin box set, documents can be sent to the bulletin box. The stored documents in the bulletin box can be retrieved (polling) by specifying the sub-address of that box. (Password specified as necessary)

Reference

- Sending documents to another party's bulletin box..... Transmissions using sub-addresses (see page 3-116)
- Retrieving documents stored in another party's bulletin box ... Reception using sub-addresses (see page 3-118)
- Storing documents in your bulletin box..... Storing documents in bulletin boxes (see page 3-120)

◆ F-code relay command communications

When an F-code relay box has been set in a relay machine, specifying the sub-address of that box can perform relay command communications. (Password specified as necessary)

At the relay machine, specified documents are sent (distributed) to the receiving party (distribution destination) registered in the box.

Reference

- Transmitting relay commands Perform F-code transmissions after first checking the sub-address of and password to the relay command communications box that are set in the other fax machine. (see page 3-116)
- When this machine is used as the relay machine ... Set the relay box by registering F-code boxes (see page 3-100).

Registering F-code boxes

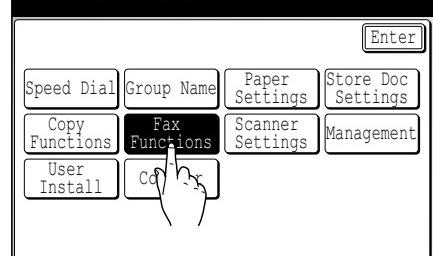

F-code boxes need to be registered to utilize F-code communications. Enter the sub-address and password in each F-code box.

Note

- Sub-addresses must be entered. Enter passwords as necessary.
- Setting I.D. codes prevents anyone other than the specified person(s) from operating the F-code boxes.

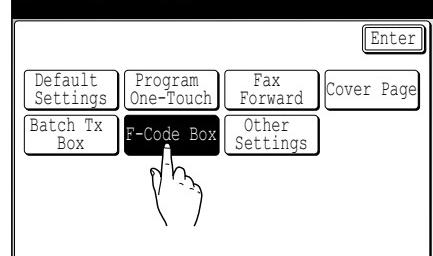

1 Press **SETTING**.

Settings
Select item to edit.

Registering F-code security boxes

Reference

"Registering F-code boxes" (see page 3-100)

1 Press [Secure Box].

01:
Select box type.

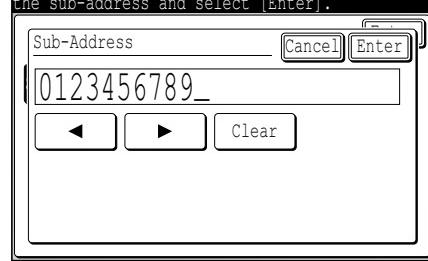

Note

- Up to 20 digits can be entered for sub-addresses. Only numerals can be entered.
- If the number is incorrect, press [Clear] to input the correct number.

2 (1) Use the numeric keypad to enter the sub-address.

(2) Select [Enter].

01:
Use the numeric keypad to enter the sub-address and select [Enter].

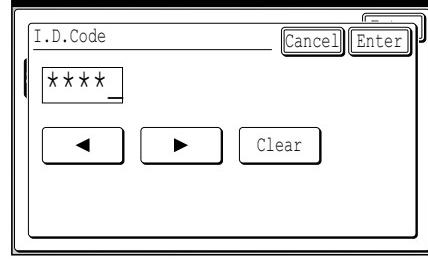

Note

- This I.D. code is required to take out the document transmitted to this security box, or to change the settings of this box.
- The I.D. code will not be displayed anywhere. Make a record not to forget it.

3 (1) Use the numeric keypad to enter the I.D. code (4 digits).

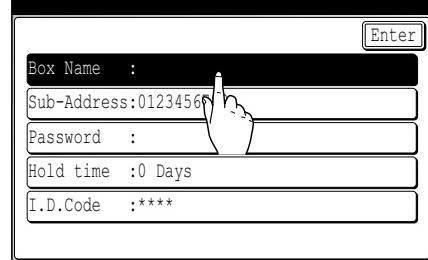

(2) Press [Enter].

01:
Enter I.D.Code/password

4 Enter the box name. (1) Press [Box Name].

Secure Box
Select item to edit.

Note

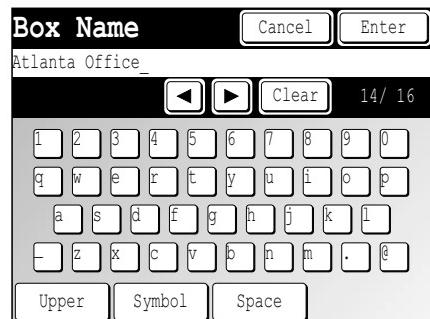

Up to 16 characters can be entered.

Reference

For details of the character entry, refer to page 1-44.

(2) Enter the box name.

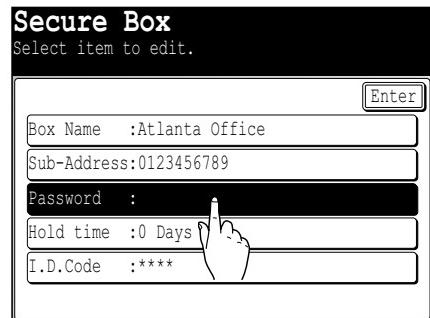

(3) Press [**Enter**].

5 Enter a password and hold time as necessary.

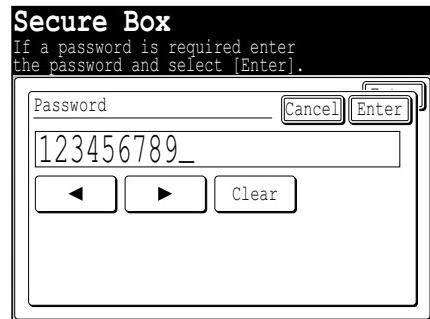

■ Entering a password

(1) Press [**Password**].

**Note**

- Up to 20 digits can be entered for passwords. Numerals, # and * can be entered.
- It is not always necessary to enter passwords. The same password can be entered in other boxes as well.
- This is the password for ITU-T-compatible F-Code fax transactions. You do not need to have a password for the F-Code box. However, using a password will make your F-Code communication much more secure.

(2) Enter the password using the numeric keypad, then press [**Enter**].

Faxing and Copying the Same Document at Once (Fax&Copy)

Documents can be faxed and copied simultaneously with just one scanning operation. This function is useful for internal communications when copies need to be made after a fax is sent.

Note

- Rotate transmissions cannot be performed.
- If copy protect is set to ON, Fax&Copy cannot be used. (see page 4-37)
- Resolution for both the fax and copies will be either fine or S-fine. (No other selections are available.)

Reference

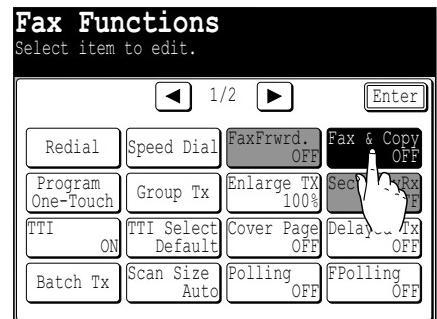

How to load document
(see page 1-42)

1 Load a document.

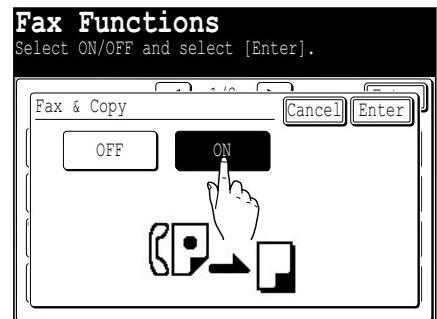

2 (1) Press **FAX**.
(2) Press **[Others]**.

3 Press **[Fax&Copy]**.

4 (1) Press **[ON]**.
(2) Press **[Enter]**.

Reference

Methods for specifying the location are as follows:

- Specify using the numeric keypad (see page 3-8)
- Specify using the one-touch keys (see page 3-10)
- Specify using speed-dial (see page 3-10)
- Specify using the Address Book (see page 3-12)
- When specifying multiple locations, use Broadcast Tx (see page 3-58) or Groups tx (see page 3-61).

Note

After the copy screen appears, you cannot switch to the fax screen (by pressing **FAX**).

Note

Press **STOP** to cancel the operation.

Reference

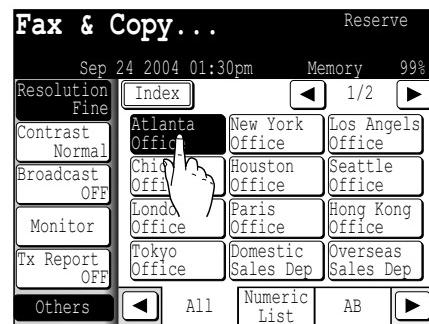

For details of canceling the transmission, refer to page 3-28.

5 Fax&Copy is now set. Press [**Enter**] again.

6 Select the location.

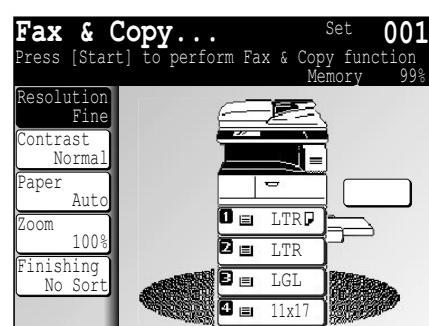

If you select the location using the one-touch keys or the Address Book, proceed to step 8.

If you select it by other methods, proceed to step 7.

7 Press **START**.

8 Copy Screen will be displayed.

9 Perform copy settings as needed. (Advanced copying cannot be performed.)

10 Press **START**. Transmitting and copying will start simultaneously.

OneLine + Distinctive Ring Detection (DRD)

Many phone companies now offer their customers a special service which makes it possible for one phone line to do the work of two. With this service, you physically still have one phone line, but, electronically, you have two phone numbers. Your phone recognizes these different numbers and rings differently for each one.

For example, this makes it easy for you to have both a business number and a home number on one phone line, so you can answer one with "Jane Doe Consulting," and the other with "Hello." This works because you can tell the difference between the distinctive patterns of the two rings.

Operating tips

In order to use OneLine + DRD, your phone company must set up your distinctive ring service. When signing your contract, also check the ring pattern allocated.

Ring pattern

Your fax has eight possible distinctive ring patterns for use with OneLine + DRD.

One of them should work with your phone company's DRD service. This chart lists the patterns:

Pattern	One complete ring pattern (seconds)
A	0.8 on, 0.4 off, 0.8 on, 4.0 off
B	0.4 on, 0.2 off, 0.4 on, 0.2 off, 0.8 on, 4.0 off
C	0.3 on, 0.2 off, 1.0 on, 0.2 off, 0.3 on, 4.0 off
D	1.0 on, 0.5 off, 1.0 on, 3.5 off
E	0.5 on, 0.5 off, 0.5 on, 0.5 off, 1.0 on, 3.0 off
F	0.5 on, 0.5 off, 1.0 on, 0.5 off, 0.5 on, 3.0 off
G	0.4 on, 0.6 off, 0.4 on, 4.6 off
H	1.5 on, 0.5 off, 0.5 on, 3.5 off

Example: pattern C is 0.3 seconds ringing, 0.2 seconds silent, 1 second ringing, 0.2 seconds silent, 0.3 seconds ringing and 4 seconds silent. Then it goes back to the first 0.3-second ring and starts over.

Masking the PIN

What is PIN masking?

To prevent unauthorized long-distance calls, some office phone systems require you to enter a personal identification number (PIN) whenever you dial long distance.

Your fax's PIN mask feature helps you keep that PIN number private. With the PIN mask activated, you can dial a fax number plus a PIN, but the PIN will not appear in a journal, error message printout, delayed command list or a TCR. The PIN may be up to eight characters in length. It also can include the * or # symbols, and it can be entered from the numeric keypad.

There are three possible settings for the PIN mask:

- Off Turns off the PIN mask feature. Any PIN you enter will appear on any display or printout which shows the number you dial.
- Mode 1 Each remote fax unit has a departmental PIN access code.
- Mode 2 Each fax user has a departmental PIN access code.

Note

If you select either Mode 1 or Mode 2 and will be using Batch Transmission (see page 3-64), you must store the PIN access code for the remote unit within the appropriate batch box.

Operating tips

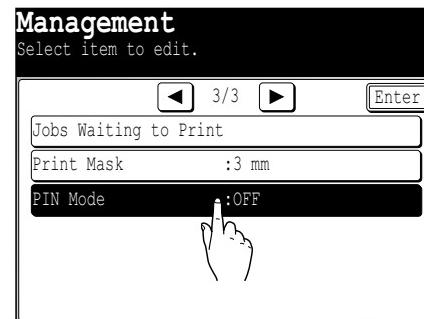

For this feature to work, you must have activated the protect passcode as described on page 4-36. You must also know the passcode.

Setting PIN mask

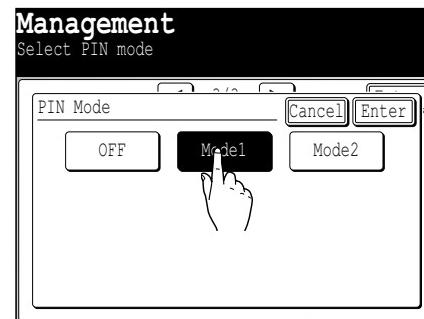

1 Press **SETTING**.

2 Press **[Management]**.

3 (1)Press **[◀] or [▶]**.
 (2)Press **[PIN Mode]**.

4 Select desired mode.

Note

Select **[OFF]** to release the setting.

Note

Press **RESET** to return to the standby screen.

5 Press **[Enter]**.

When you select **[Mode 1]** or **[Mode 2]**, the PIN mask has been set.

When you select **[OFF]**, the setting has been released.

Entering speed-dials (Mode 1)

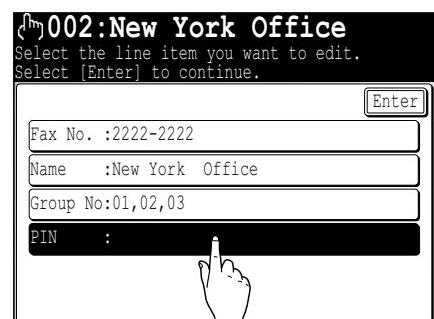

In Mode 1, you must add the PIN to the speed-dial number. Transmission is not possible if a PIN number has not been entered. If Mode 2 has been set, the following entry is not necessary.

Note

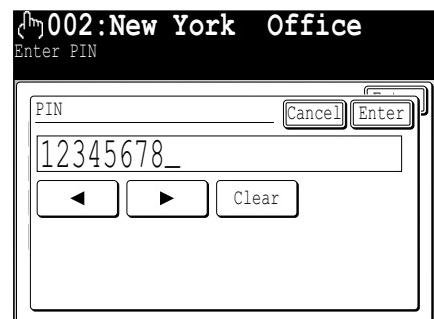

See page 3-162, if necessary.

1 Create or change an entry using the one-touch key or speed-dial.

2 While setting up, the machine asks you to enter the PIN. Select [PIN] and press [Enter].

3 Use the numeric keypad to enter the desired PIN, up to eight characters in length.

4 Press [Enter] to save the PIN.

Note

- If you press [Enter] without entering the PIN, the machine beeps, displaying "PIN is not stored" on the touch screen, and then returns to step 2.
- Press **RESET** to return to the standby screen.

5 Press [Enter] to save the speed-dial setting.

Entering program one-touch keys (Mode 1)

In Mode 1, you must add the PIN to the program one-touch key. Transmission is not possible if a PIN number has not been entered. If Mode 2 has been set, the following entry is not necessary.

Note

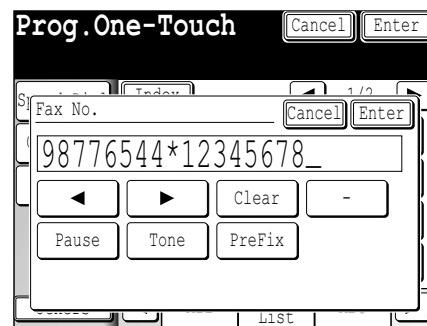

See page 3-174, if necessary.

1 Create or change an entry using the program one-touch key.

2 Enter the phone number, then press the * (“star”) to enter the PIN.

The PIN always goes last.

For example, to dial 98776544 with a PIN of “12345678”, enter 98776544*12345678.

Note

- If you press [Enter] without entering the PIN, the machine beeps, displaying “PIN is not stored” on the touch screen, and then returns to step 2.
- Press **RESET** to return to the standby screen.

3 Press **[Enter]** to save the number.

4 Press **[Others]**, perform the necessary entries, and then press **[Enter]** to save the settings.

Dialing while using the PIN mask

■ If you select Mode 1 - use “star” power

1 Load a document.

Note

To create speed-dial or one-touch key for transmission, the PIN needs to be registered in advance.

2 (1) Press **FAX**.

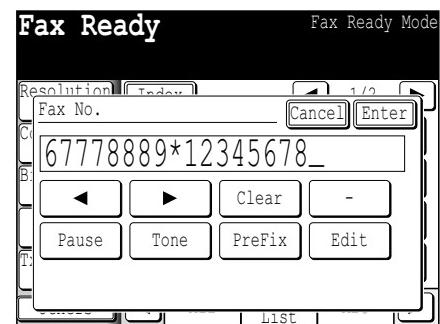

(2) Enter the location.

If the location was selected using the numeric keypad, proceed to step 3. If it was selected using speed-dial or one-touch key, the transmission will begin here.

3 Enter the phone number, then press the * (“star”) and enter the PIN.

The PIN always goes last.

For example, to dial 6777888999 with a PIN of “12345678”, enter 6777888999 *12345678:

Note

Press **RESET** to cancel the settings.

4 Press [**Enter**].

5 Press **START**. The PIN disappears from the display, and your machine dials the desired phone number.

■ If you select Mode 2 - the machine guides you

1 Load a document.

2 (1) Press **FAX**.
(2) Enter the location.

Reference

Methods for specifying the location are as follows:

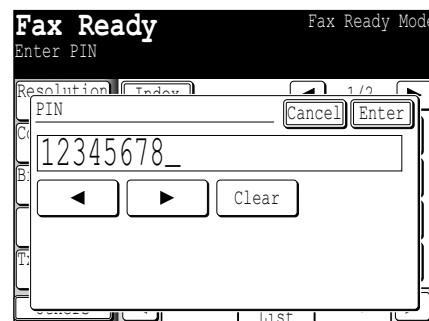

- Specify using the numeric keypad (see page 3-8)
- Specify using the one-touch keys (see page 3-10)
- Specify using speed-dial (see page 3-10)
- Specify using the Address Book (see page 3-12)

- When specifying multiple locations, use Broadcast Tx (see page 3-58) or Group Tx. (see page 3-61)

3 Press **START**. The touch screen shows:

4 Use the numeric keypad to enter the PIN.

5 Press [**Enter**].
Your machine dials the number.

Note

Press **RESET** to cancel the settings.

Performing batch transmission while using the PIN mask

If you select either Mode 1 or Mode 2 and will be using Batch Transmission (see page 3-64), you must store the PIN access code for the remote unit within the appropriate batch box.

- 1 Follow the steps for creating or modifying a batch box. (see page 3-64)
The touch screen asks for the fax number.

- 2 Use the numeric keypad to enter the fax number to which the batch transmission should go.

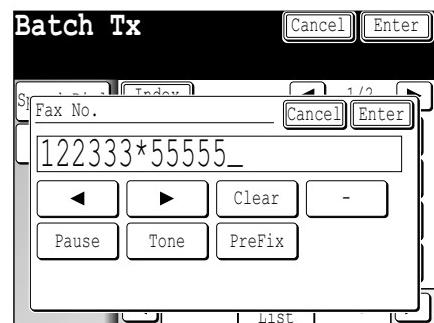

Important

When using Mode 2, you can not specify the destination using the speed-dials. Even if the number you want to register in the batch transmission has been registered in the speed-dials, use the numeric keypad to enter the destination according to the procedure.

When using Mode 1, if the destination was specified using the speed-dials, proceed to step 4.

- 3 Follow the fax number by the * ("star") and enter the PIN.

Note

Press **RESET** to return to the standby screen.

- 4 Press **[Enter]** to save the setting.

Now you can perform batch transmission to this box while the PIN mask is activated.

Blocking Junk Faxes

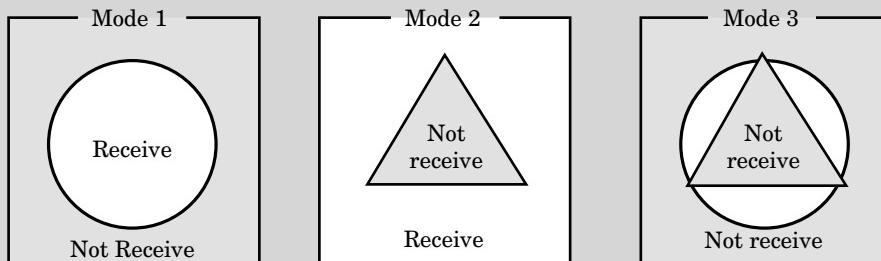

You can block junk faxes several ways, such as only allowing faxes to be received from numbers registered in one-touch key or speed-dial or by setting the machine to block faxes from designated numbers.

Operating tips

There are 3 ways to block junk faxes.

- Mode 1: This method sets the machine to receive faxes only from contacts registered in one-touch key and speed-dial. The last four digits of the registered fax number are checked against the contact's ID, and the fax will only be received if they match.
- Mode 2: This method requires you to register specific junk fax numbers, and then the machine blocks any faxes from those numbers. The final four to eight digits of the applicable fax numbers are registered. Up to 50 contacts (fax numbers) can be entered.
- Mode 3: This method is a combination of methods 1 and 2. The machine blocks faxes from any numbers not registered in one-touch key or speed-dial. The machine also blocks faxes from contacts registered as junk fax numbers.

OFF: Junk faxes are not blocked.

:Incoming numbers

:Numbers registered in one-touch key and speed-dial

FAX

Entering/Editing Speed-Dial

- Up to 500 receiving parties frequently used for fax transmission can be registered. The numbers registered in speed-dial 001 to 048 are the same as one-touch numbers 01 to 48. For example, the receiving party registered for one-touch key 01 is the same as the receiving party registered for speed-dial 001.
- The location displayed in the Address Book shows the speed-dial in alphabetical order.
- In addition to the each contact's name and fax number, you can also enter the group numbers in speed-dial.

Operating tips

The following items can be entered in speed-dial. Prepare the necessary information in advance.

- Number of contact: Up to 40 digits can be set.
- Name of contact : Up to 24 characters can be set.
- Group No. : Group numbers are entered here when speed-dials are divided into groups. This enables you to send faxes and retrieve information by group.

Reference

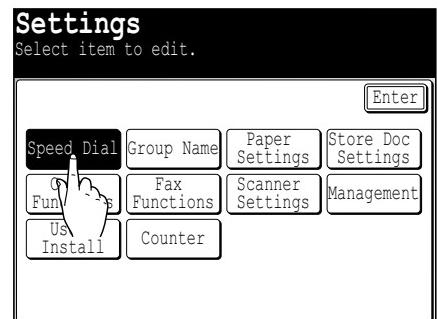

You can also allocate a name to each group. (see page 3-188)

Entering/Editing

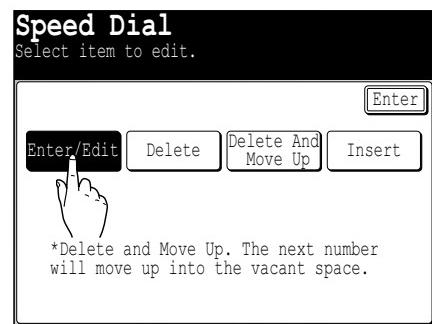

This describes the procedure for entering a fax number and/or name in the speed-dial. You can change the number or name by overwriting or deleting the existing information in each step.

1 Press **SETTING**.

2 Press **[Speed Dial]**.

3 Press [Enter/Edit].

4 Press the speed-dial number you want to enter.

5 (1) Use the numeric keypad to enter the contact's fax number. (Up to 40 digits) (2) Press [Enter].

6 Enter the contact's name. (1) Press [Name].

Note

Press [\blacktriangleleft] [\triangleright] to change the screen.

Note

When entering a contact's details for the first time, the contact's fax number entry screen will be displayed. To change the contact's number, press "Fax No." to display the entry screen, then re-enter the number.

Reference

Pause and other dialing symbols can be also entered. (see page 3-6)

To enter the contact name in the one-touch keys....

Enter the name of the contacts registered in speed-dials 001 to 048 on the one-touch name labels, and then paste them onto the corresponding one-touch keys. The one-touch name labels are included in the instruction kit.

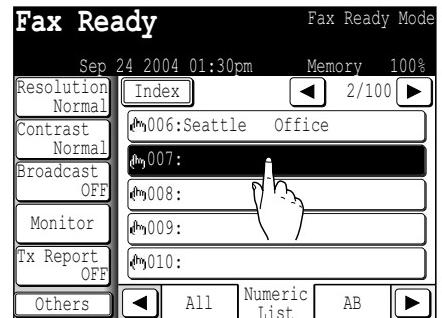

Entering method 1: Entering directly into unregistered speed-dials

By pressing unregistered speed-dials, the entering operation becomes automatically available.

- 1 Press FAX to display the Fax standby screen.

■ When selecting from the Address Book

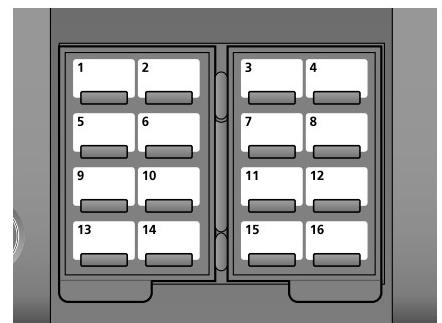

- 2 (1) Press [Numeric List].
 (2) Press an unregistered speed-dial.

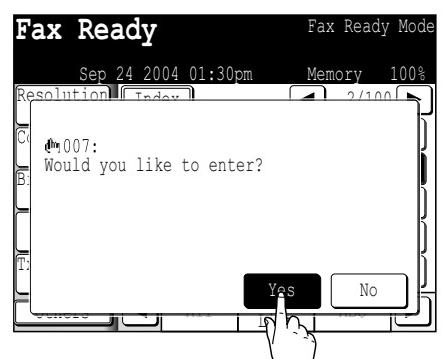

■ When selecting from the one-touch keys

Entering for unregistered speed-dial numbers 001 to 048 can be performed by pressing to select unregistered one-touch keys 01 to 48.

- 2 Press an unregistered one-touch key.

- 3 Press [Yes] to enter.

- 4 Follow the procedure for entering the selected speed-dial, which is identical to steps 5 to 9 on pages 3-163 to 3-165.

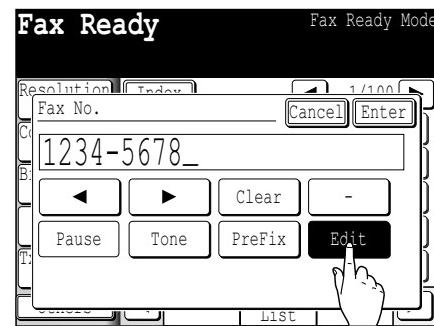

Entering method 2: Enter the number using the numeric keypad

By pressing an unregistered speed-dial, the entering operation becomes automatically available.

1 Press **FAX** to display the Fax standby screen.

2 Use the numeric keypad to enter the contact's fax number.

3 Press [**Edit**].

4 Press [**Yes**] to enter.

5 Follow the procedure for entering speed-dials, which is identical to steps 6 to 9 on pages 3-163 to 3-165.

Deleting speed-dial

1 Press **SETTING**.

2 Press **[Speed Dial]**.

3 Press **[Delete]**.

4 Select the speed-dial you want to delete.

Note

Press **[No]** to return to step 4 without deleting the number.

5 Press **[Yes]** to delete.

6 To continue to delete other speed-dials, repeat from step 4 to 5.

Note

Press **RESET** to return to the standby screen.

Inserting a new contact in the speed-dial number list

A new contact can be inserted in the speed-dial number list. However, this operation cannot be performed if the 500 speed-dial numbers have already been entered.

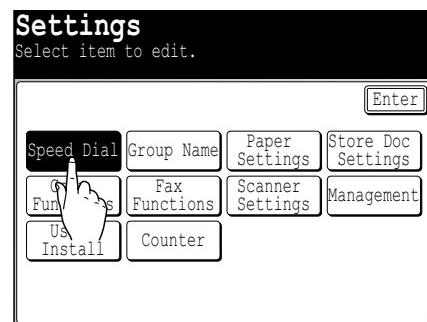

Note

The numbers registered in speed-dial 001 to 048 are the same as one-touch numbers 01 to 48. Because of this, the order of the one-touch numbers will change when a new contact is inserted and entered in speed-dial numbers 001 to 048.

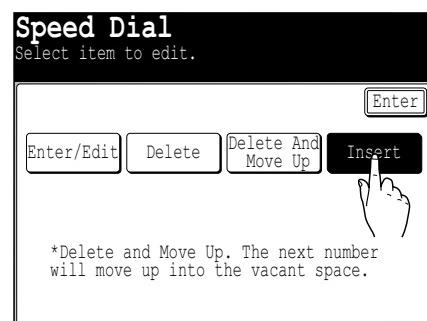

- Make sure that you do not change the speed-dial numbers entered in the program one-touch keys. If the numbers are changed, re-enter the program one-touch keys.

1 Press **SETTING**.

2 Press **[Speed Dial]**.

3 Press **[Insert]**.

Note

- The speed-dial "500" cannot be selected.
- For example, select speed-dial 005 if you want to insert the new speed-dial in speed-dial 005.

4 Select the speed-dial where the new speed-dial is to be entered.

 - (2) Press [Enter].

Note

Press **RESET** to return to
the standby screen.

- 6** The default for resolution is set.
You can continue on from here
and set other defaults as well.

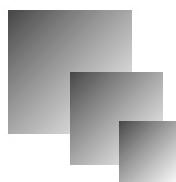

Transmission default settings list

Function	Description	Setting
Resolution	This sets the default level for resolution when a document is scanned. By setting it to a level suitable for the most commonly sent document type, you can reduce the time and effort required when making changes.	<u>Normal</u> Fine S-Fine Photo Background
Contrast	This sets the default level for contrast when a document is scanned. By setting it to a level suitable for the most commonly sent document type, you can reduce the time and effort required when making changes.	Lightest Lighter <u>Normal</u> Darker Darkest
TTI	Set to “ON” to display or print the sender’s name on faxes.	<u>ON</u> OFF
Memory transmission (see page 3-5)	This sets whether to give the priority to memory transmission or to real-time transmissions when sending faxes. Memory transmissions are prioritized when “ON” is set and real-time transmissions when “OFF” is set. You can also select to give the priority to memory transmissions or to real-time transmissions each time you send a fax.	<u>ON</u> OFF
Cover page (see page 3-76)	Set to “ON” to add a cover page containing a simple message to every fax.	ON <u>OFF</u>
Tx report (see page 3-154)	Set to “ON” to print out a transmission report for each fax. You can also select ON or OFF for each fax communication.	ON <u>OFF</u>

Underlined items are the factory default.

Note

Factory defaults are the settings established at the time of shipment.

Other Settings

This section describes a number of useful functions that can be set when sending and receiving faxes. Select settings most suited to your usage conditions.

Setting example

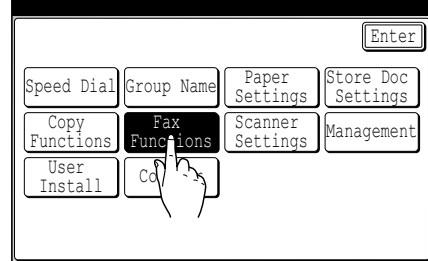

An example of how to set the time between redials is given below.

1 Press **SETTING**.

2 Press **[Fax Functions]**.

Settings

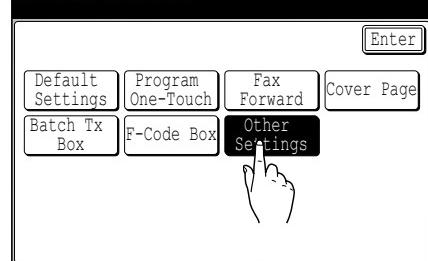

Select item to edit.

3 Press **[Other Settings]**.

Fax Functions

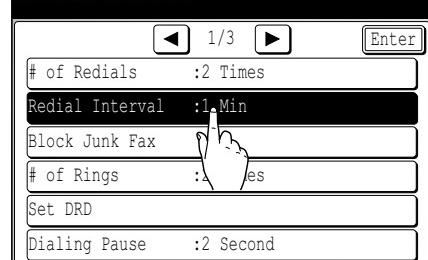

Select item to edit.

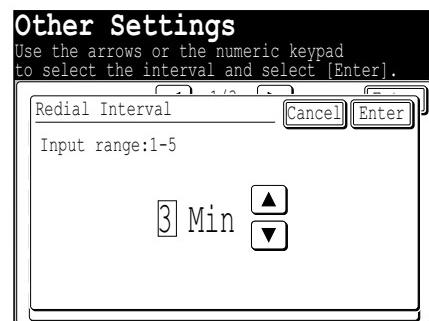

4 Press **[Redial Interval]**.

Other Settings

Select item to edit.

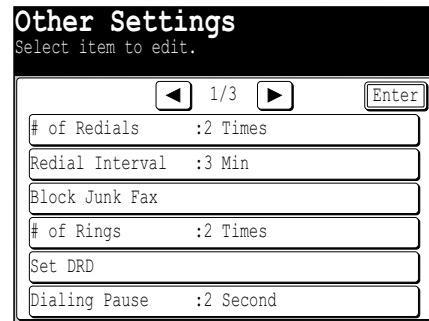

- 5** (1) Use [**▲**] [**▼**] or the numeric keypad to set the time between redial attempts.
 (2) Press [**Enter**].

**Note**

Press **RESET** to return to the standby screen.

- 6** The redial interval is now set. You can continue to set other defaults.

Common Settings

In This Case...

Appendix

Other settings list

Function	Description	Setting
# of Redials	This sets the number of times for redial attempts when the destination line is busy. The interval between redial attempts is set at “Redial Interval”.	2-15 times: <u>2 times</u>
Redial Interval	This sets the interval between redial attempts.	1-5 minutes: <u>1 minute</u>
Block Junk Fax (see page 3-156)	This function enables you to block receipt of unnecessary faxes.	Reference: Page 3-156
# of Rings	This sets the number of times the machine will ring before fax reception when the reception mode is set to Fax or Tel/Fax. Note <input checked="" type="radio"/> When in the Low Power mode, the number of rings will be more than the number set.	1-10 times: <u>2 times</u>
Set DRD (see page 3-136)	Set this to “ON” when using DRD. There are eight ring patterns, A to H. Select the setting most suited to your usage conditions.	<u>OFF</u> A~H: <u>A</u>
Dialing Pause	This sets the default for the dialing interval (2-10 seconds) when the pause symbol is input.	2-10 seconds: <u>2 seconds</u>
High Resolution	This sets the dpi for resolution when a document is scanned for S-fine transmission. If 600 dpi is set, the scan is sharper than with 400 dpi; however, it may result in memory overflow when the document is sent.	600dpi <u>400dpi</u>
Rx Reduction Rate	Select from “Auto”, which automatically selects the magnification according to the length of the document being received, or “100%” to have all faxes printed out at the same rate of reduction.	<u>Auto</u> 100%
Reduction Margin (see page 3-50)	This sets at what point the document printout will extend to the following page if the document being received cannot fit within the effective recordable area.	0.0-3.3 inches: <u>1.5 inches</u>
Paper Saving (see page 3-51)	This sets the print method for documents received. If it is set to “H-Page Rx” and 2 pages of Letter, Legal or 11"×17" are received in succession, the two pages will be reduced at the appropriate rate and printed out on one piece of paper. If it is set to “Duplex Rx”, both sides of each sheet of paper will be used for printouts. Note <input checked="" type="radio"/> A duplex print unit is required for duplex reception.	<u>OFF</u> H-Page Rx Duplex Rx
Rotate Tx	An Letter  document can be rotated on its side, scanned and sent as Letter size. The “Rotate Tx” setting is only effective with memory transmissions. 	<u>ON</u> OFF
Quick Memory Tx	If this is set to “ON”, fax transmission for multiple documents will begin in order of page when it has been scanned and stored.	<u>ON</u> OFF

Underlined items are the factory default.

Function	Description	Setting
ECM Mode (see page 3-6)	Any part of a fax that did not send correctly due to the line error will automatically be resent. (The receiving party must have the same function for it to work.)	<u>ON</u> OFF
Service Mode	Do not set.	
Dial PreFix (See page 3-139)	The connection number as Dial PreFix No. can be entered to allow easy access to other phone networks.	Reference: Providers (See page 3-139)
Receive Time Stamp	<p>If this is set to "ON", the received date (year, month, day) and time can be printed with the word "Received" at the header of the received document.</p> <p>Received Time your machine prints.</p> <p>Sender name Received Fax: Sender fax number 27 Nov 2004 14:16 27 Nov 2004 14:15 P.01</p> <p>THE SLEREXE COMPANY LIMITED SAPORS LANE - BOOLE - DORSET - BH25 8ER TELEPHONE BOOLE (94513) 51617 - TELEX 123456</p> <p>Sender information sent from the remote fax.</p>	<u>OFF</u> ON

Underlined items are the factory default.

Note

Factory defaults are the settings established at the time of shipment.

COPY&FAX

Macros

- Enter a series of operations in Macros to allow all the entered operations to be performed by one press of the button.
- Entering the fixed operation is useful when the same copy is made or the same fax is sent frequently.

Operating tips

- Check and record the operating instructions first for the settings you want to enter, which is helpful for entering the settings easily and quickly.
- There are six Macros keys. Up to 60 steps of operation can be entered in each key. (One step is equivalent to one selection or press of a key.)
- When steps are being entered in Macros, the machine will emit a beeping sound and the screen keys (**COPY**, **FAX**, **SCANNER** and **PRINTER**) will blink. As the number of steps that can be entered near the limit, the beeps will sound and the keys will blink in shorter intervals.
- “Last job” cannot be entered. **RESET** or **INTERRUPT** cannot be entered, either.

Setting up macros

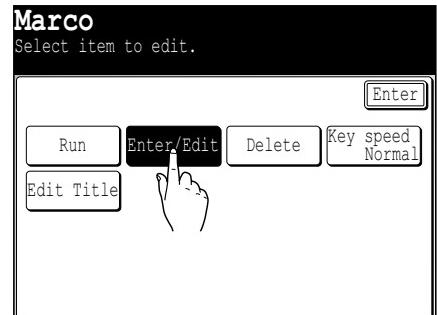

1 Press **MACRO**.

Note

When steps have already been entered in Macros, the corresponding list of steps for that key is displayed. In that case, press **[Enter]**.

2 Press **[Enter/Edit]**.

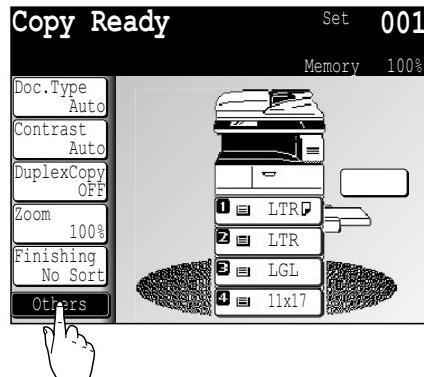

- 3 Select the macro key you want to enter.

- 4 Press [Yes].

- 5 Perform the operation you want to enter.

- 6 Press MACRO to complete the entry.

Note

Press [No] to return to step 3.

Note

- Up to 60 steps can be entered.
- If you try to enter more than 60 steps, the following message is displayed: "Too many steps. Would you like to enter?" Press [Yes] to enter the step, then proceed to step 6. Press [No] to return to the standby screen without entering the step.

Note

- Press RESET to return to the standby screen.
- Press INTERRUPT to complete the entry and return to the screen in step 7.

Common Settings

In This Case...

Appendix

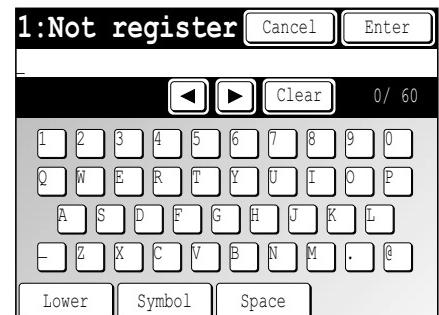

Note

- Up to 60 characters can be entered.
- For details of the character entry, refer to page 1-44.
- In the **MACRO** lists, up to 40 characters from the beginning of the title are displayed.

Note

- Individual operations cannot be changed once they are entered. You will need to return to the beginning and perform the entire entry again.
- While the entry is being performed, any mistakes in the operations and changes procedures will be also entered.

7 Enter the title.

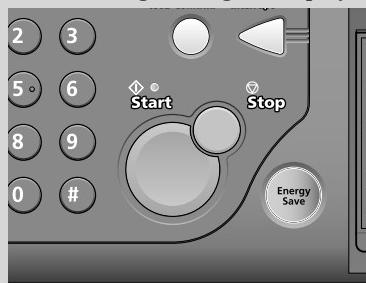

8 Press [Enter] to complete the entry.

In this case

When you have entered **START**....

The following message is displayed if **START** is pressed during an operation.

Press [**Yes**] to enter the steps (operations) until **START** was pressed. Press [**No**] to enter the steps (operations) until the one immediately before **START** was pressed.

● You can use this function as follows:

Press [**No**] while entering a sending operation, excluding **START** in Macro. Then, when you press the corresponding **MACRO**, all the entered steps just before pressing **START** will be run. After that, delayed transmission or other settings can be set.

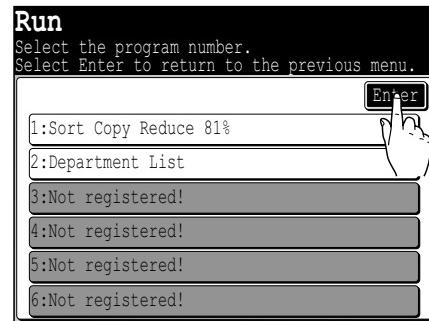

* If you press [**Yes**] and include **START** in Macro, the fax will be sent. Therefore, such settings as delayed transmission cannot be set.

Changing titles of macro keys

The titles of macro keys can be changed.

1 Press **MACRO**.

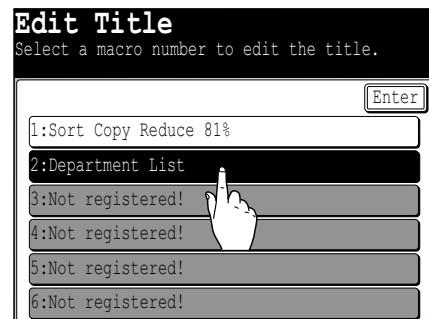

2 Press **[Enter]**.

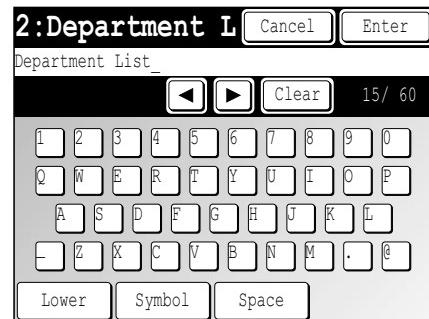

3 Press **[Edit Title]**.

4 Select the macro key whose title you want to change.

5 Press **[Clear]**, to enter the new title.

6 Press **[Enter]** to change the title. To continue to change other titles, repeat from step 4.

Note

- Up to 60 characters can be entered.
- For details of the character entry, refer to page 1-44.

Note

Press **RESET** to return to the standby screen.

Managing Operating Conditions by Department

You can use the Department Management Function to limit who uses the machine for sending faxes and making copies by requiring input of a department code.

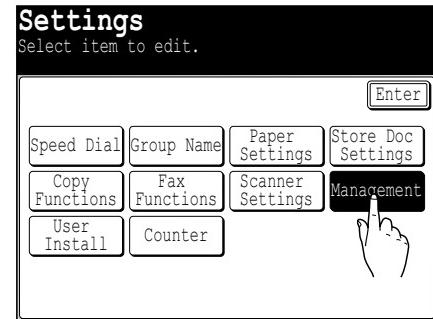

You can also calculate the number of pages of faxes or copies made, as well as costs for copying and faxing, for each department number.

- (1) Register the charge per page. (see page 4-12)
↓
- (2) Register the department numbers and names. (see page 4-14)
↓
- (3) Turn on the Department Management Function. (see page 4-17)
↓
- (4) Use a department number to make copies and send faxes. (see page 4-18)
↓
- (5) Check the Department List for operation conditions. (see page 4-20)

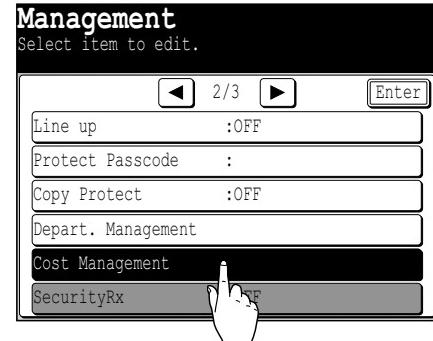

Register copy charge (Cost management)

Register the cost per page for copying, if collecting copying charges per department.

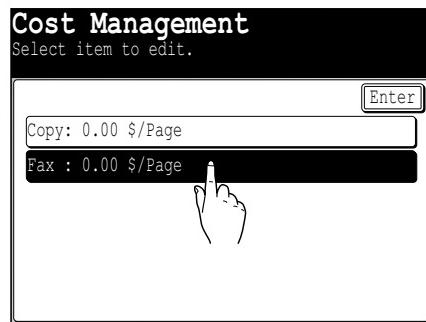

- 1 Press **SETTING**.
- 2 Press **[Management]**.

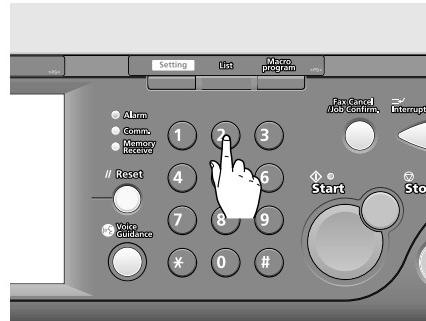

- 3 (1) Press **[◀] or [▶]**.
(2) Press **[Cost Management]**.

- 4 Press [Copy] to register the copy charge, and press [Fax] to register the fax charge.

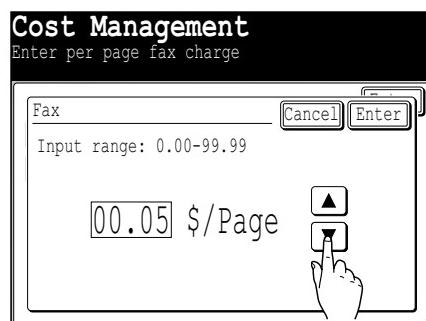

- 5 (1) Use [\blacktriangle] [\blacktriangledown] or the numeric keypad to enter the charge per page of copies or faxes.

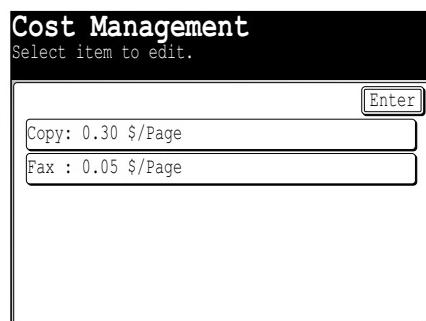

(2) Press [Enter] after entry.

- 6 The charges have been registered.

Note

Press **RESET** to return to the standby screen.

1. Type

This column shows the document type, such as “Polling Doc”.

2. Data (KB)

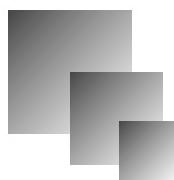

This column shows how much memory each document is using.

3. Page

This column shows the number of pages in the document.

4. Note

This column details any additional information, such as the box or file number.

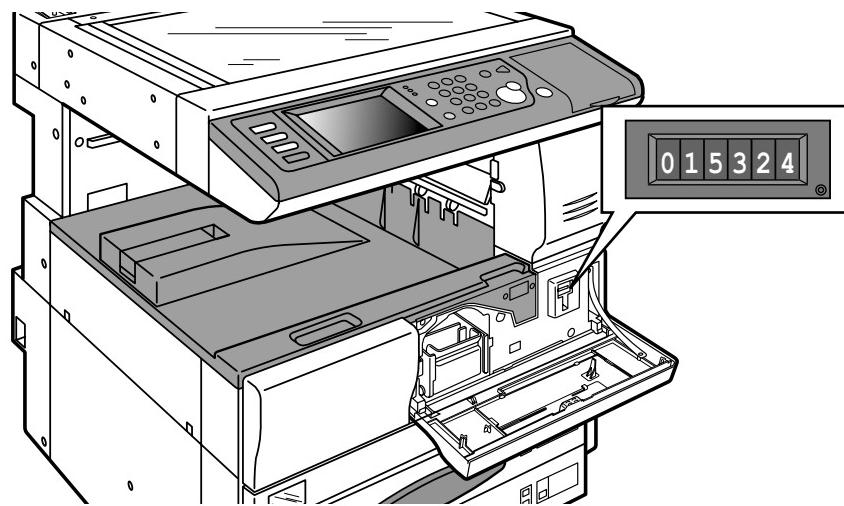

Checking the Number of Printed Pages

You can check the total number of pages printed by this machine. If the machine is used for duplex printing, each side of the document will count as one print. Meaning a two-sided document counts as 2 prints.

Checking mechanical page counter

The mechanical page counter can be located by opening the front cover.

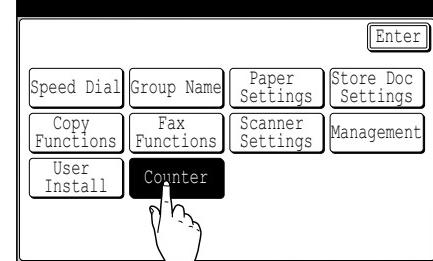

Checking the number of printed pages using the touch screen

You can check the total number of pages printed and scanned on the machine. If the machine is used for duplex printing or scanning, each side of the document will count as one print/scan. Meaning a two-sided document counts as 2 prints/scans.

1 Press **SETTING**.

2 Press **[Counter]**.

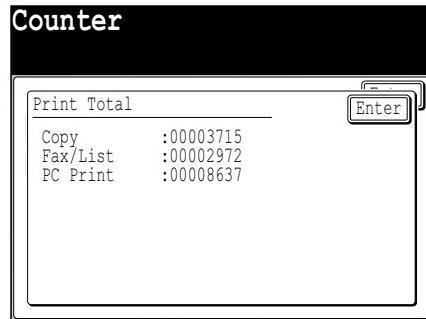

Settings
Select item to edit.

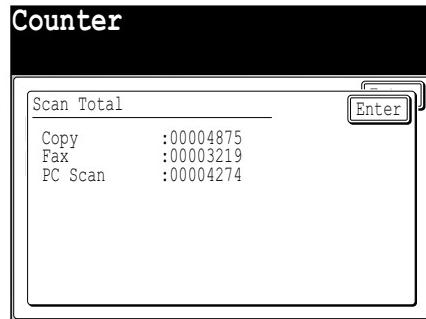

3 Select [**Print Total**] or [**Scan Total**].

4 The number of pages used for each function will be displayed.
■ When [**Print Total**] is selected

■ When [**Scan Total**] is selected

Note

- Press **RESET** to return to the standby screen.
- The number displayed on touch screen might be different from the counter's value in the machine.

Paper Jams

If a paper jam occurs, an alarm will sound and a message will be displayed where the paper jam occurred. Remove the paper carefully, following the procedure. If **VOICE GUIDANCE** is active, press it to hear an explanation of how to clear the paper jam.

Note

To stop voice guidance, press **VOICE GUIDANCE** again during the guidance.

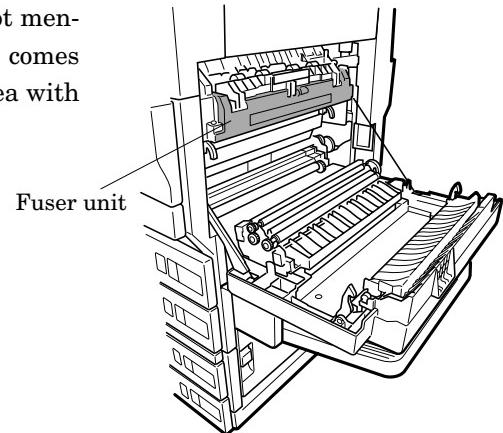

Reference

You can make the voice guidance start automatically by setting the "OP. Guidance Mode" to "Auto". (see page 1-61)

⚠ CAUTION

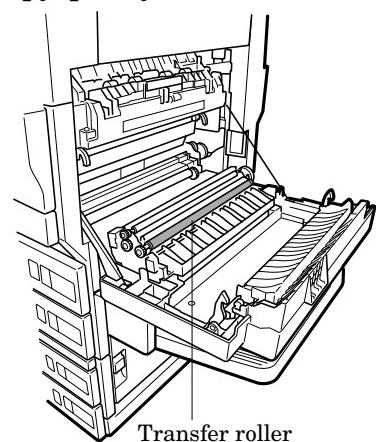

The fuser unit and the area around it are extremely hot.

Contact may cause burns, so be sure not to touch any area not mentioned in the procedure. If your hand or any other body part comes into contact with a hot part, immediately cool the affected area with cold water.

Touching the surface of the transfer roller adversely affects the copy quality.

Do not touch the surface of the transfer roller.

If paper jam occurs in the fusing area

- 1 Pull the right cover release lever (C1) and open the right door.

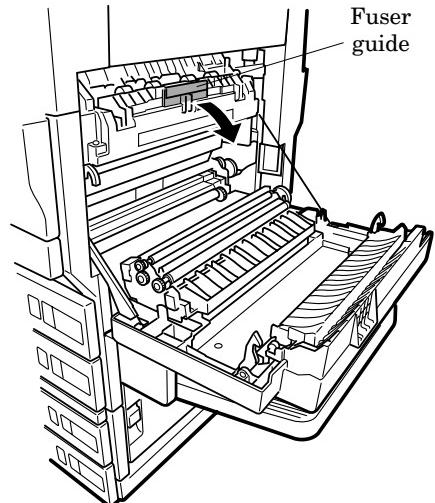

Right cover release lever (C1)

- 2 Gently pull out the jammed paper.

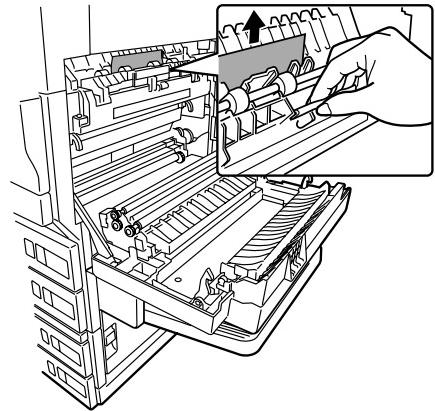

3 Open the fuser tray.

Note

If there is no duplex unit, open cover above the fuser unit and remove the paper jammed inside.

4 Gently remove the jammed paper.

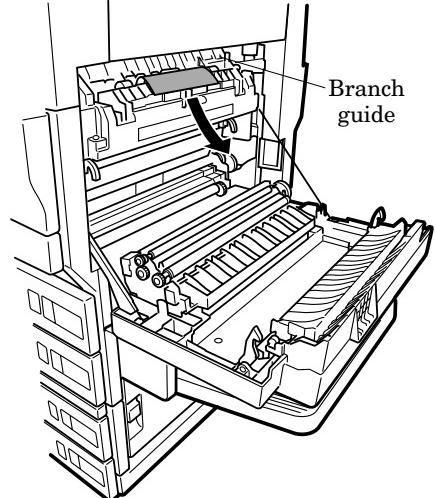

■ If a switchback unit is installed

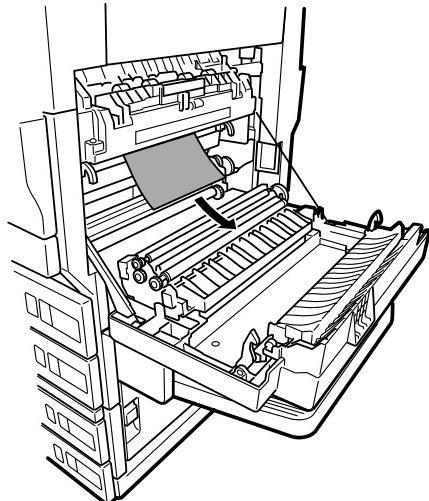

Note

The switchback unit is optional. The model installed with the duplex unit or 2-Bin tray mounts the switchback unit.

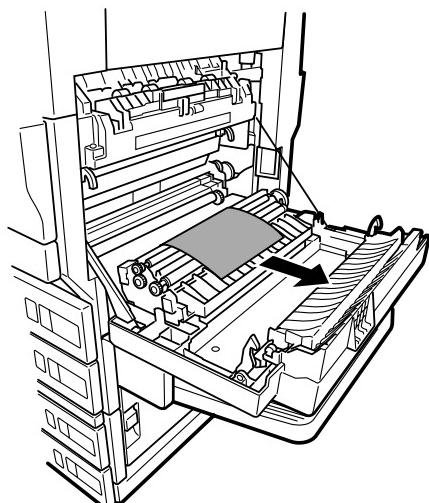

5 Open the branch guide and gently pull out the paper jammed in the switchback unit.

- 6 Gently pull out the paper jammed in the fuser unit.

- 7 Gently remove the paper jammed at the transfer roller.

In this case

If the paper is as described below, contact your Muratec dealer.

- Paper wrapped around the transfer roller
- Paper folded and pulled into the transfer roller
- Paper tears when you attempt to remove it, and pieces are still jammed in the machine.

Document Jams

If the document jams, an alarm will sound and a message will be displayed. Remove the paper carefully, following the procedure.

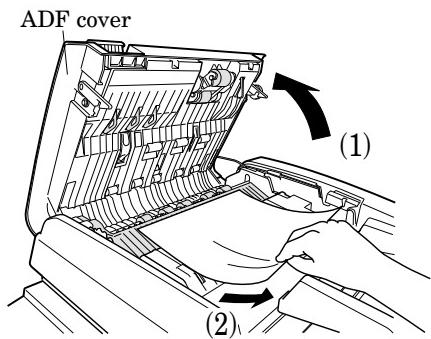

Important

If the document cannot be easily pulled out, do not force it. Turn the dial to discharge the paper. Forcefully pulling the document out may cause it to tear.

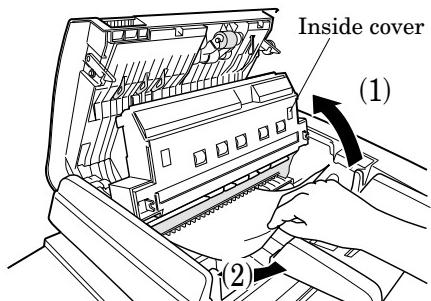

Note

If the document is caught in the roller, do not attempt to pull it out, but proceed to step 3.

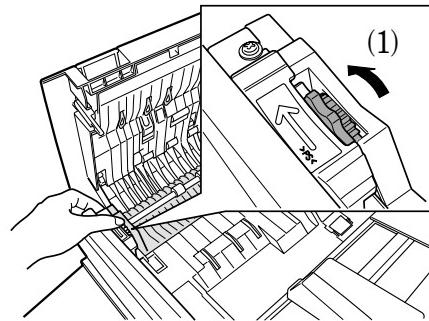

- 1 (1) Lift the ADF cover release lever (A1) to open the ADF cover.
(2) Remove the jammed document. If the document cannot be removed, go to step 2.

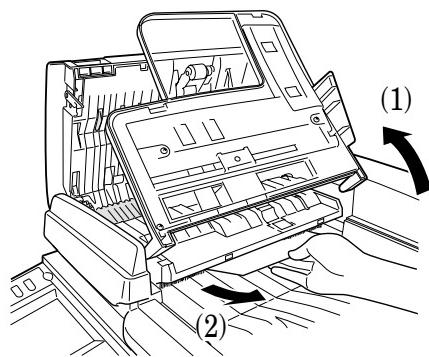

- 2 (1) Open the inside cover (A2).
(2) Gently pull out the jammed document.
If the document cannot be removed, go to step 3.

- 3** (1) Turn the dial to discharge the jammed document.

- (2) Lift up the document tray.
 (3) Gently pull out the jammed document.

- 4** Lower the document tray. Close the inside cover and the ADF cover.

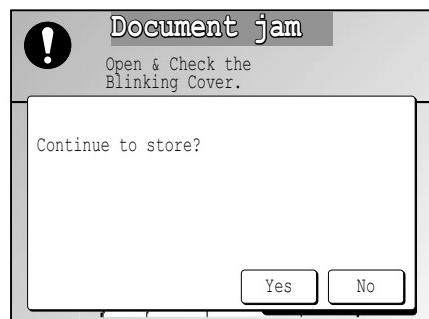

Note

If you are using Quick Memory Transmission, a check message will be printed indicating the number of pages in the document that got jammed. Replace the jammed document and resend it.

Note

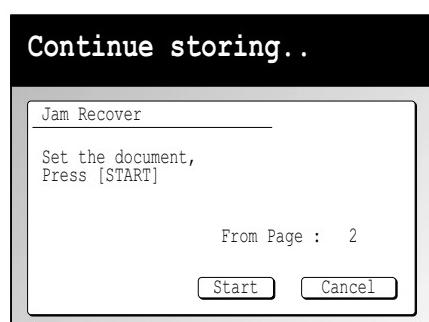

In transmitting, press [No] to stop transmission. In copying, press [No] to start copying only the scanned document.

- 5** (1) When the error message shown at right is displayed, the remaining pages of the document can continue to be scanned.

- (2) Press [Yes] to continue scanning.

- 6** Replace the jammed document and press [Start] or START. Scanning of the document will start.

Replacing Drum Cartridge/ Toner Bottle

Drum cartridge/Toner bottle

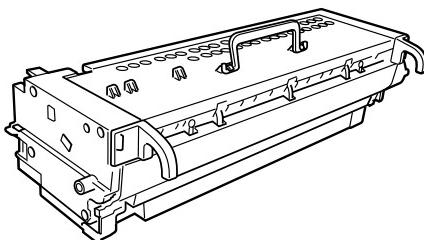

⚠ CAUTION

- Never dispose of the drum cartridge or toner bottle in fire. They can explode and catch fire.
- Keep the toner out of your eyes. If toner gets in your eyes, flush with water and seek medical attention.

Important

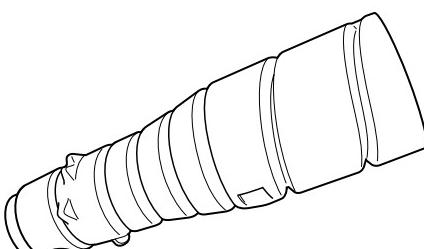

- Do not expose the drum cartridge to direct sunlight or strong light. Do not expose it to ordinary indoor lighting for more than 5 minutes.
- The drum shutter protects the drum inside by preventing it from being exposed to light. Never open the drum cover. Do not touch the surface of the drum with your hands. Doing so will prevent the unit from functioning properly.
- Keep water, oils, and other similar substances away from the drum cartridge and toner bottle.
- Do not open the bags the drum cartridge and toner bottle come in before installation.
- Be sure to use the toner bottle specified for MFX-2830. Any other toner bottles could cause the malfunction.

■ Drum cartridge

The drum cartridge should be replaced after around 84,000 A4-sized copies made with a toner coverage of 6%.
(When printing 3 A4-sized pages in a row)

■ Toner bottle

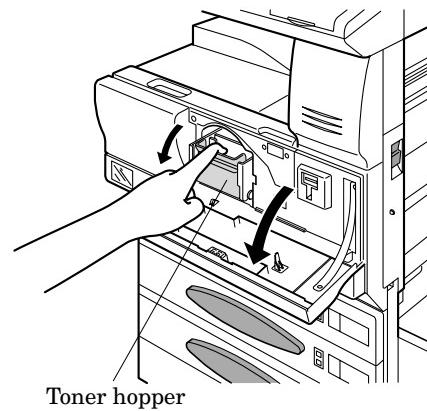

The toner bottle should be replaced after around 14,000 A4-sized copies made at a toner coverage of 6%.

Note

- The toner coverage is a value that indicates the amount of toner applied when printing a single page. The number of pages previously described is only a rough figure, which will vary depending on the kinds of documents you use and how they are printed.
- When the time approaches for replacing the drum cartridge or the toner bottle, a message will appear announcing it. The message will indicate how many pages you can continue printing before replacement. (The actual count is a rough figure, which means that the unit could not print before the number becomes 0.)

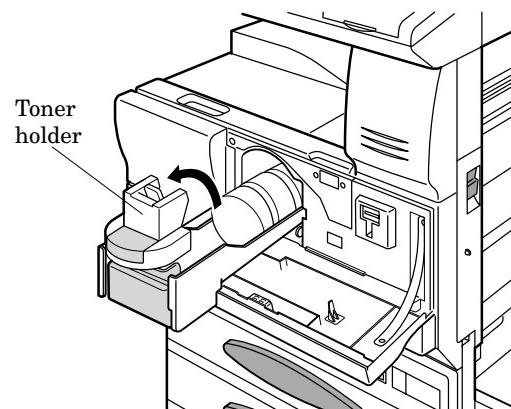

Replacing toner bottle

1 Open the front cover.

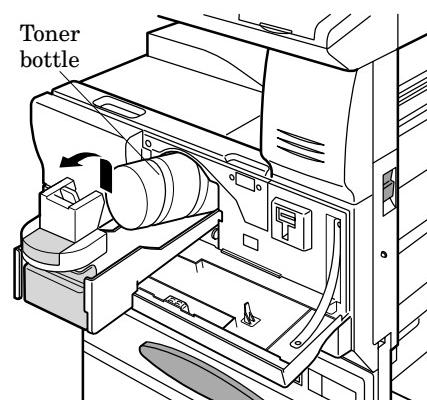

2 Pull the toner hopper towards you as far as it comes.

3 Lift up the toner holder.

4 Pull out the empty toner bottle slowly.

Appendix

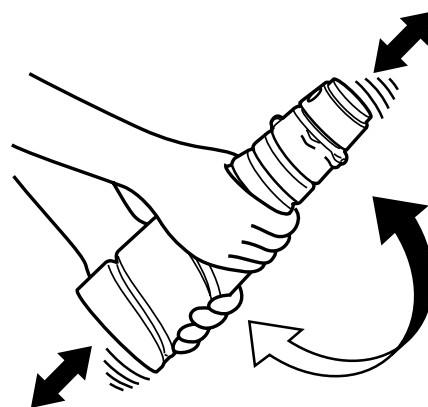

Note

- The toner inside the toner bottle may solidify sometimes, so it must be always broken up before use.
- Tapping the bottle too hard may cause damage to the table.

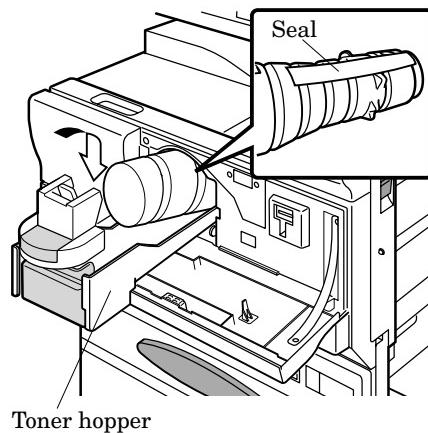

5 Tap the new toner bottle on a table or other hard surface four or five times for each direction.

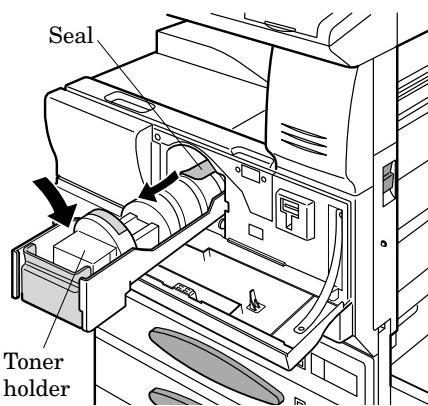

6 Vigorously shake the new toner bottle up and down five times.

7 With the seal on the toner bottle facing up, set it in the toner hopper.

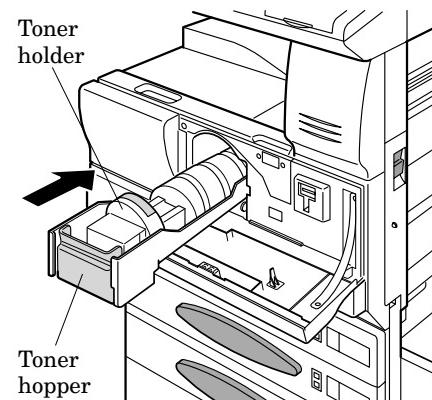

8 Tilt it down until the toner holder locks. Grab the seal on the toner bottle and slowly pull it out towards you.

Note

- Toner supply starts automatically when the lid of toner bottle storage is closed.
- Do not turn off the power or open any other covers when supplying the toner.

9 Return the toner hopper until it clicks.

10 Close the front cover.

Replacing drum cartridge

1 Pull the right cover release lever (C1) and open the right cover.

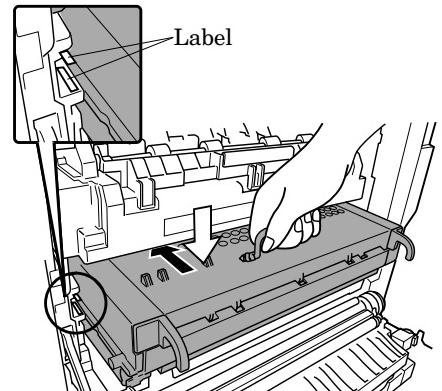

2 Grab the blue hooks on both side of the drum cartridge, pull out the old drum cartridge slowly, and remove it holding the handle.

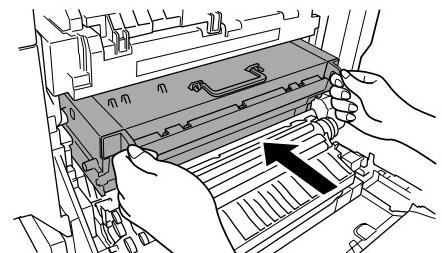

3 Get the new drum cartridge ready.

- 4 Match up the blue label on the drum cartridge with the blue label on the rails of the unit and set the drum cartridge in the unit.

- 5 Press down on the blue hook on the drum cartridge until it clicks.

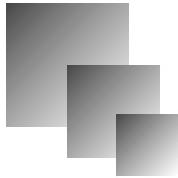

- 6 Close the right cover.

- 7 The screen to confirm the drum cartridge replacement will be displayed.

A new drum detected
Press START

- 8 Press **START**.
In several minutes (max. 5 minutes), the screen will return to the standby screen.

Maintenance

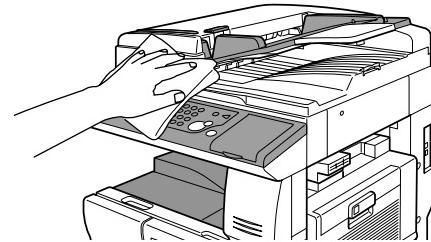

Perform the following maintenance to ensure the unit functions properly all the time.

Clean outside of the unit

Important

Do not use benzene or thinner as cleaning agents which could damage plastic and paint.

- 1 Dip a soft cloth in a mild cleaning solution and wring it out thoroughly before wiping the unit with it. Repeat the process with a soft cloth dipped in water and thoroughly wrung out.

Cleaning ADF glass/Document glass

Dirty ADF glass will cause a black line or other unwanted markings printed in copies or the received document by receiving party. To maintain high picture quality, clean the ADF glass and document glass at least once a month.

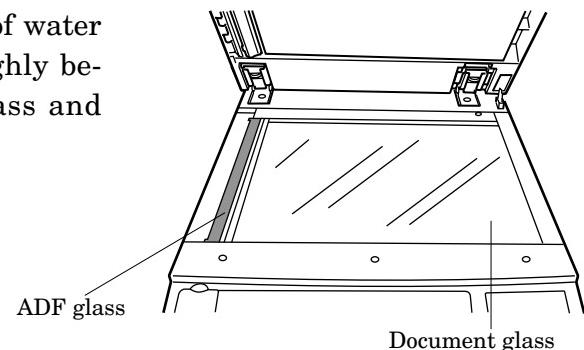

Important

Do not use benzene or thinner as cleaning agents which could damage plastic and paint.

- 1 Open the platen cover.

- 2 Dip a soft cloth in a bit of water and wring it out thoroughly before wiping the ADF glass and document glass.

- 3 Close the platen cover.

In this case

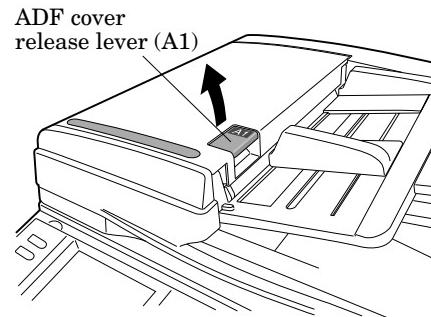

Dirt is heavy...

When the dirt on the surfaces is heavy, wipe them with a cloth dipped in a small quantity of a mild cleaning solution, and then wipe them again with a cloth dipped in water and thoroughly wrung out.

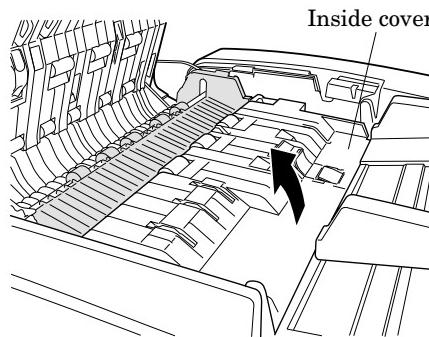

■ Cleaning contact glass inside the cover

Wipe the ADF glass inside the cover.

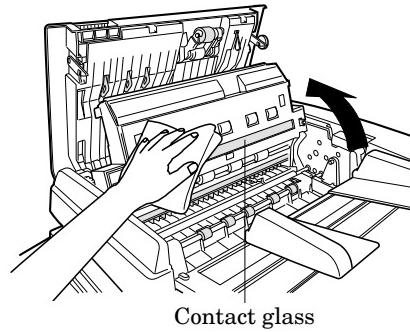

- 1 Lift the ADF cover release lever (A1) to open the ADF cover.

- 2 Open the inside cover (A2).

- 3 Wipe the contact glass of inside the cover.

Cleaning platen cover

A dirty platen cover plate or cover pad will cause black lines or other unwanted markings printed in copies or the received document by receiving party. To maintain high picture quality, clean the platen cover plate and cover pad at least once a month.

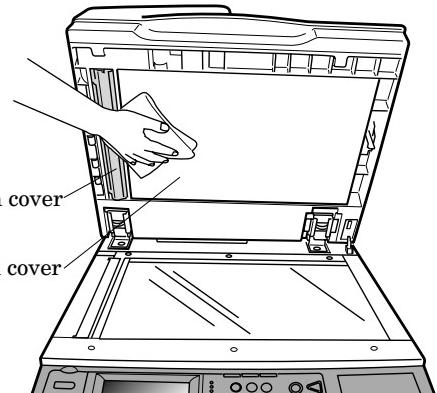

- 1 Open the platen cover.

- 2 Dip a soft cloth in water and wring it out thoroughly before wiping the platen cover and cover pad.

Note

When the dirt is heavy, first use a small quantity of a mild cleaning solution to wipe, and then wipe again using a cloth dipped in water and thoroughly wrung out.

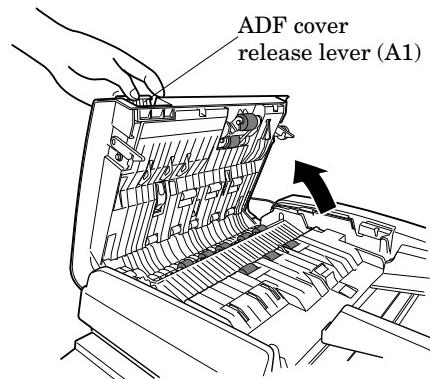

Cleaning document feeder roller

A dirty document feeder roller will not only make the document dirty, but also cause black lines or other unwanted markings printed in copies or the received document by receiving party. It can also cause document jams.

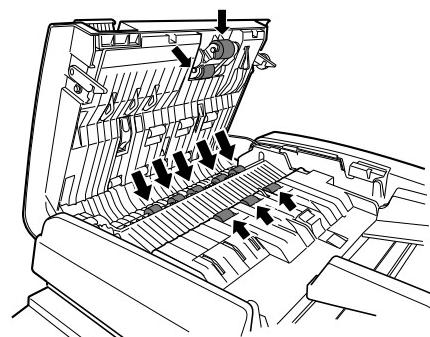

Important

Do not use benzene or thinner as cleaning agents which could damage plastic and paint.

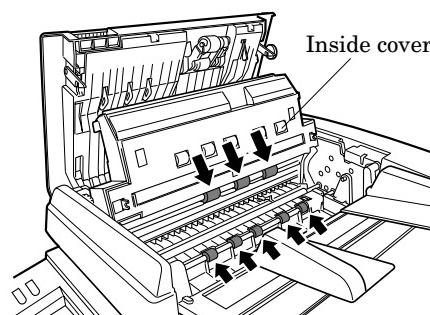

- 1 Lift the ADF cover release lever (A1) to open the ADF cover.

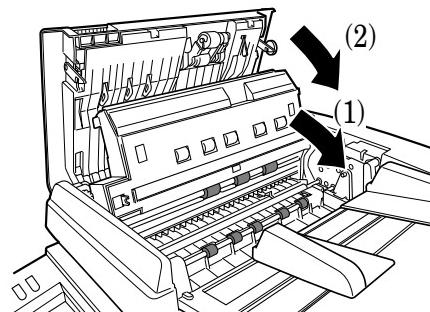

- 2 Clean the document feeder roller.
 (1) Dip a soft cloth in water and wring it out thoroughly before wiping the roller.

- (2) Open the inside cover (A2).
 Dip a soft cloth in water and wring it out thoroughly before wiping the roller.

- 3 Close the ADF cover.
 (1) Close the inside cover.
 (2) Close the ADF cover.

Note

- Wipe down the whole roller, turning it with one hand. (Some rollers do not turn.)
- When the dirt is heavy, wipe them with a cloth dipped in a small quantity of a mild cleaning solution, and then wipe them again with a cloth dipped in water and thoroughly wrung out.

Note

- Wipe down the whole roller, turning it with one hand.

Error Message

If the alarm sounds

The alarm will sound for four seconds. The cause of the alarm is either displayed as an error message or printed out. In either case, you should check the cause and take appropriate action.

Message	Status and countermeasure	Error code
Check condition of remote fax	► Call the other party and ask them to check the mode, fax number, machine status, pass code, and any other relevant information about their machine.	T.1.1, T.2.1, T.2.3, T.5.1, T.5.2, T.8.1, R.8.1, T.8.10, R.8.10, T.8.11, R.8.11
Check received documents	► Call the receiving party and ask them to check the operating status of their machine.	T.4.2
Repeat transmission	1. The document was not transmitted properly. ► Resend the document. 2. The phone line has problems. ► Resend the document.	T.3.1
		T.4.1 T.5.3
Please dial again	1. The document was not successfully sent to the receiving party, despite having redialed the set number of times. ► Input the receiving party's fax number and send the document again. If this message appears again, call the receiving party to ask them to check the status of their machine. 2. Check the phone line settings to make sure they are correct.	D.0.2
Memory overflow	► During reception, ask the sending party to resend the document. The memory may overflow when received documents are stored in memory due to no paper or toner. In this case, replace the paper, drum cartridge, or toner bottle. ► During transmission, set the machine to real time transmission and resend the document.	R.4.4
Dialing number is not set	► Re-set the speed-dial number and resend the document.	D.0.6
Stopped	► Communication has stopped, restart the operation.	D.0.3 T.1.4 R.1.4

Error code

D: Dialing Errors

Mode	Error code	Description	Countermeasure
G3 Transmission	D.0.2	Receiving line is busy	► Resend the document.
	D.0.3	STOP was pressed	► Resend the document.
	D.0.6	The receiving fax number is not registered when using the auto-dial function	► Set the correct fax number and then resend the document.
	D.0.7	The receiving party did not answer when using the auto-dial function	► Set the correct fax number and then resend the document.

T: Transmission Errors

Mode	Error code	Description	Countermeasure
G3 Transmission	T.1.1	Wrong number (receiving party answered and hung up)	► Check the correct fax number and resend the document.
		The receiving party answered manually and hung up the phone	► Check how the receiving party should receive a fax.
		The receiving party's machine is not a G3 machine	► Transmission is not available in this machine.
	T.1.4	STOP was pressed when transmission started (only the auto print journal is displayed)	► Resend the document.
	T.2.1	The line status was bad (especially when communicating overseas) and the receiving party cut off the line	► Resend the document. If this error occurs repeatedly, contact your Muratec dealer.
		Your machine's settings do not match with the receiving party's	► Check the settings on the receiving machine. If the receiving party has special settings, ask them to release them.
	T.2.3	Due to a line error, communication is not available even at the slowest speed	► Resend the document. If this error occurs repeatedly, contact your Muratec dealer.
	T.3.1	In a consecutive transmission, the second page including the following pages caused a read error	► Resend the document starting from the page that caused the error.
		A document longer than 900 mm was sent	► Cut one page within 900 mm in length, and resend.
	T.3.2	Brightness in the lamp is insufficient if "Lamp error. Call for service" is displayed after transmission is interrupted	► Turn the power switch from OFF to ON and try to make a copy. If the error message does not appear, resend the document. If the error message appears again, contact your Muratec dealer.
		Due to a line error, communication failed	► Resend the document. If this error occurs repeatedly, contact your Muratec dealer.
	T.4.1	Due to a line error, the receiving party cut off the line during document transmission	► Resend the document. If this error occurs repeatedly, contact your Muratec dealer.
	T.4.2	An image quality error occurred at the receiving party (due to line error)	► All pages were received but some of them might have had poor image quality. Ask the receiving party to check the quality of the document.
	T.4.4	The line cut off during document transmission (due to line error)	► Resend the document.

T: Transmission Errors

Mode	Error code	Description	Countermeasure
ECM Transmission	T.5.1, T.5.2, T.5.3	The line cut off during document transmission (due to a line error)	▶ Resend the document. If this error occurs repeatedly, contact your Muratec dealer.
	T.8.10, T.8.11	Due to a line error, communication failed	
	T.8.1	The reception mode does not match	▶ Check the receiving machine. It sometimes turns out that the receiving party is not using a fax machine.

R: Reception Errors

Mode	Error code	Description	Countermeasure
G3 Reception	R.1.1	Your machine is set to manual reception or transfer reception and is ready to receive, but no signal comes from the sending party	▶ The sending party may have made an operational mistake. If you know whom the sending party is, ask them to resend the document.
	R.1.2	Your machine's mode does not match with the sending party's	▶ If you know whom the sending party is, ask them to resend the document. If this error occurs repeatedly, contact your Muratec dealer.
		Received Junk fax when the junk fax block function is on (only the auto print journal is displayed)	
	R.1.4	Pressed STOP during reception (Only the auto print journal is displayed)	▶ If you know whom the sending party is, ask them to resend the document.
	R.1.5	Due to a line error, communication failed	
	R.2.3	Due to a line error, the line cut off	
	R.3.1	Pulled out the document or the Stop key was pressed by the sending party	▶ If you know whom the sending party is, ask them to resend the document. If this error occurs repeatedly, contact your Muratec dealer.
	R.3.3	Due to a line error, the signal cut off (due to line error)	
	R.3.4	Due to a line error, reception is not available even at the slowest speed (due to line error)	
	R.3.5	Due to a memory overflow, the reception failed	▶ Check the amount of memory left and ask the sending party to send the document again.
ECM Reception	R.4.2	Due to a line error, the signal cut off during reception (due to line error)	▶ If you know whom the sending party is, ask them to resend the document. If this error occurs repeatedly, contact your Muratec dealer.
	R.4.4	Memory overflow (only the auto print journal is displayed)	
	R.5.1	The signal cut off during reception The sending party pressed STOP	
	R.5.2	Due to a line error, the signal cut off during reception (due to line error)	▶ If you know whom the sending party is, ask them to resend the document. If this error occurs repeatedly, contact your Muratec dealer.
R.8.10, R.8.11	R.8.10, R.8.11	Due to a line error, communication failed	
	R.8.1	Your machine's mode does not match with the sending party's	▶ Check the sending party's machine. For example, their machine may not have the document in case of polling operation.

When Power Failure Occurs

Main unit operation

■ What happens when power failure occurs

During phone call	Phone conversation can continue.
During fax transmission	Transmission will be cut off. When the power comes back, your machine will start to transmit again automatically if it was in memory transmission. If it was a real-time transmission, it will not start again. Transmit again.
During fax reception	Reception will be cut off. When the power comes back, the machine will print the pages received completely before the power failure.
During copying	Printing will stop.
During printing a list	

■ During the power failure

Copy	Cannot copy.
Fax transmission	Cannot transmit.
Fax reception	Cannot receive.
Making phone calls	Cannot make phone calls.
Receiving phone calls	Phone calls can be received with the handset. <small>*The handset is optional.</small>

Memory backups

Image data stored in memory is held under the following conditions even if a power failure occurs or the unit is shut down.

- Image data stored in memory is held for the following period of time. Note that the power of the machine should be turned ON for at least 48 hours beforehand.
- The time it takes for back up image data depends on the size of the memory.

32 MB: Approx. 34 hours (standard memory) 64 MB: Approx. 17 hours (if the 32 MB Memory Extension kit is installed)

Documents erased notification

- When the image data stored in memory is erased by accident, a notification will be printed as soon as the power comes back, listing information about the erased image data.
- The following is an example of a received file that has been erased. In addition, “Command erased”, “Erased Poll Documents” and “F-Code box document erased” may be printed.

NewYork Office Fax:123-456-4890

Troubleshooting

Read this if you find trouble with the machine. Contact your Muratec dealer if the following steps do not solve the problem.

Unit does not operate

Status	Check item	Countermeasure	Reference page
Unit does not operate	Is the power cord firmly inserted?	Check the power switch and power plug.	1-16
	Is the power switch on?	Turn the power switch on.	1-24
Nothing appears in the display	Is the touch screen contrast for the display set too light or too dark?	Adjust the touch screen contrast while watching the display.	1-19
	Is the lamp on ENERGY SAVE on?	The machine is in Energy Save Mode. Press ENERGY SAVE , and turn Energy Save Mode off.	1-25
Unable to dial	Is the phone line connected to both the unit and the wall outlet?	Make sure the line is connected correctly.	1-16
	Is the type of phone line set correctly?	Make sure all settings match the phone line properties.	1-53
The phone does not work	Is the machine in the middle of transmitting a document?	Wait until the machine finishes transmitting.	—
	Is the type of phone line set correctly?	Make sure all settings match the phone line properties.	1-53
The paper does not come out	Is paper jammed?	Check the error message and remove the jammed paper.	5-2
Paper often jams	Is paper loaded properly?	Load paper properly.	1-29
	Is the cassette loaded properly?	Make sure the cassette is pushed all the way in.	—
The document does not come out	Is the document jammed?	Remove the jammed document and reload it.	5-12
Document often jams	Are you using the right type of documents?	Use the right type of documents.	1-40
	Is the document guide aligned properly?	Align the document guide along the document.	1-42
	Are there pieces of paper left in the ADF?	Open the ADF cover and check.	5-12
	Is the document feeder dirty?	Clean the document feeder roller.	5-23

Status	Check item	Countermeasure	Reference page
The content registered for the time data and speed-dial disappears	Do you turn off the power and leave the unit on for long periods or everyday?	The batteries that hold registered content may have died. Contact your Muratec dealer.	—
The cover will not shut	Are you pushing down on only one side of the cover?	Push down on both sides of the cover.	—

The machine does not transmit

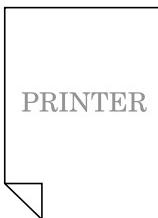

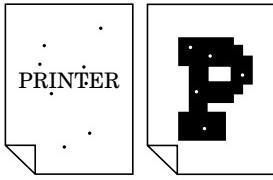

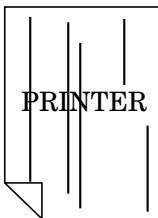

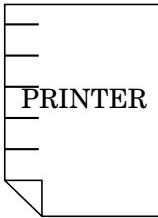

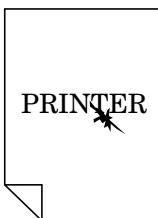

Status	Check item	Countermeasure	Reference page
The machine does not transmit	Are you transmitting correctly?	Check the procedure and try again.	3-8
	Is the recipient's phone number correct?	If you are using the speed-dial or one-touch key, make sure the number is registered correctly by printing out the list of speed-dial numbers.	3-172
	Is the type of phone line set correctly?	Make sure all settings match the phone line properties.	1-53
	Is there something wrong with the recipient's machine?	Ask the recipient to check that the machine is working properly. (Power, paper, etc.)	—
Documents are not transmitted continuously	Are the documents loaded with the edges of the paper all line up?	Reload the document.	1-42
	Do the documents include pages smaller than the minimum width (120 mm)?	These pages should be set on the document glass and kept separate from the other pages.	1-42
Does not send even if dialing the number	Is the type of phone line set correctly?	Make sure all settings should match the phone line properties.	1-53
	Is the document loaded properly?	Set the document correctly.	1-42
	Is the phone number correct?	Dial the correct number.	—
	Is the recipient's line busy?	Wait until the line is available and try again.	—
Manual transmission does not work	Did you press START after putting the handset down?	Press START before putting the handset down.	3-21
The document is not scanned when performing memory transmission	Is the document loaded properly?	Set the document correctly.	1-42
	Is the memory full?	Check how much memory is left.	—

The machine does not receive

Status	Check item	Countermeasure	Reference page
The machine does not receive	Is the machine in auto reception mode?	Check the reception mode.	1-54
	Is there paper?	Supply paper.	1-29
	Is paper jammed?	Check the error message and remove the jammed paper.	5-2
	Is the phone line connected to both the unit and the wall outlet?	Make sure the line is connected correctly.	1-16
	Is the memory full?	Check how much memory is left.	—
Manual reception does not work	Did you press START after putting the handset down?	Press START before putting the handset down.	3-21
Polling reception does not work, with only a check message printed out	Has the sender set a passcode or search polling?	Search polling and polling with passcodes set is not available.	—
	Has the sender registered a polling document?	Ask the sender to register a polling document.	—

Image quality problems

If you follow the steps below and do not resolve the problem, contact your Muratec dealer.

Symptom	Cause	Countermeasure	Reference page
 Print quality is faint (smudged, unclear)	The paper is damp.	Replace with a new paper.	1-29
	The contrast setting is incorrect.	Set correctly.	2-4, 3-4
	The drum cartridge is worn out or broken.	Replace with a new drum cartridge.	5-17
	The toner bottle is running low.	Replace with a new toner bottle.	5-15
	Is the original document yellow or green?	If you are the recipient, ask the sender to change the document to a black color. (We recommend making a copy.)	—
	Is paper other than that specified in this manual?	Use the paper specified in this manual.	1-26
 White or black spots appear	You are using the wrong type of paper.	Use the right type of paper.	1-26
	The drum cartridge is worn out or broken.	Replace with a new drum cartridge.	5-17
	The platen cover plate or cover pad is dirty.	Clean the platen cover plate or cover pad.	5-22
 Black stripes or smudges appear.	The ADF glass in the ADF or the document feeder roller is dirty.	Clean the ADF glass and document feeder roller.	5-20, 5-21
 Regularly spaced smudges or stripes appear.	There is dirt on the paper feeder route.	Make a few test copies.	—
	The drum cartridge is worn out or broken.	Replace with a new drum cartridge.	5-17
 Black stripes or smudges appear.	The paper is damp.	Replace with a new paper.	1-29
	You are using the wrong type of paper.	Use the right type of paper.	1-26
	The platen cover plate or cover pad is dirty.	Clean the platen cover plate or cover pad.	5-22

Symptom	Cause	Countermeasure	Reference page
The paper comes out solid black.	The drum cartridge is worn out or broken. The machine might malfunction.	Replace with a new drum cartridge. Contact your Muratec dealer.	5-17 —
			
The paper comes out blank.	Several sheets of paper were fed through at the same time.	Flutter the pages before setting paper.	1-29
	The drum cartridge has run out of toner.	Replace with a new drum cartridge.	5-17
	The drum cartridge is worn out or broken.	Replace with a new drum cartridge.	5-17
	The machine has malfunctioned.	Contact your Muratec dealer.	—
	Is the document facing the right side?	Set the document correctly.	1-42
There are blank spots	The paper is damp.	Replace with a new paper.	1-29
	You are using the wrong type of paper.	Use the right type of paper.	1-26
	The document glass is dirty.	Clean the document glass.	5-20
The paper comes out wrinkled or with the letters blurry	You are using the wrong type of paper.	Use the right type of paper.	1-26
	The paper is damp.	Replace with a new paper.	1-29
There are blanks in the direction the paper is fed	The drum cartridge is not set properly.	Set the drum cartridge properly.	5-17
	The drum cartridge is worn out or broken.	Replace with a new drum cartridge.	5-17
	The ADF glass is dirty.	Clean the ADF glass.	5-20
			
			
			

Symptom	Cause	Countermeasure	Reference page
The entire printout is dirty. 	The document glass is dirty. The reverse side of documents printed on both sides can also be seen in the printout.	Clean the document glass. Making duplex copies of documents printed on thin paper causes the reverse side of the document to be scanned as well, and this is printed onto the copy. Set the contrast lighter.	2-4, 3-4 5-20
The edges of paper are dirty. 	The platen cover pad is dirty.	Clean the platen cover pad.	5-22
	Are you copying onto paper larger than the document? (With the ratio set to 100%)	Select paper that is the same size as the document.	2-14
	Are the orientations of the document and paper different?	Place them both in the same orientation. Or, match the orientation of the document to match that of paper.	—
	Reduction cannot be performed at a ratio which matches the paper size.	Select a reduction ratio that matches the paper size.	2-16
The image is crooked. 	The document is not set properly.	Set the document correctly.	1-42
	The document is not appropriate for the ADF.	Use a document that can be used with the ADF.	1-40
	Is there anything on the ADF glass?	Clean the ADF glass.	5-20

Main Specifications

Product specifications and appearance are subject to change without notice.

Main unit

Item	Specifications	
Type	Floor-type (console)	
Document stand type	Stationary	
Photoreceptor type	OPC drum	
Copying method	Dry electrostatic photography	
Developing method	Electron photograph/two-component developing	
Fixing method	Heat roller fixing (halogen lamp)	
Scanning method	CCD/CIS	
Document size	ADF Length: 4.7 - 11.6 inches Width : 3.9 - 35.4 inches (sending) 3.9 - 17.7 inches (copying) Document glass Max : 10.9 inches × 17.0 inches (no minimum)	
Document storage capacity	Letter: 100 sheets (80g/m ²) 11"×17": 30 sheets	
Paper Size	Paper cassette Letter, Letter [□] , Legal, 11"×17", Half-letter, F4, Executive, Executive [□] A3, B4, A4, A4 [□] , B5, B5 [□] Bypass tray Letter, Letter [□] , Half Letter, Half Letter [□] , Legal, 11"×17", A3, B4, A4, B5, B5 [□] , A5, A5 [□] , A5, Postcard, A6, F4, Executive, Executive [□] , CM10, DL, Custom (Width 5.5 - 17.0 inches, Length 3.9 - 11.7 inches)	
Paper storage capacity	Paper cassette Plain paper, recycled paper: 500 sheets (64 g/m ²) Bypass tray Plain paper, recycled paper: 150 sheets (80 g/m ²) Special paper: (pasteboard, OHP film, postcard, labels) : 50 sheets Envelopes : 10	
Image memory capacity	32 MB (approx. 34 hours of memory backup using battery) ^{*1} Number of stored pages (using standard Muratec paper) 32 MB: Approx. 2533 pages 64 MB: Approx. 5263 pages	
Power	AC 120 V±10% 50/60 Hz variable	
Power consumption	Sleep Mode : 8.8 W Low Power Mode : 50 W Standby : 168 Wh Maximum : 1320 W	
Current	12 A or lower	
Weight ^{*2}	80.8 Kg (178.1 lb)	
Machine dimensions	W26.7 × H33.7 × D25.9 inches (W678 × H856 × D658 mm)	
Environment conditions	Ambient temperature: 50 - 95°F (10 - 35°C) Relative humidity: 15 - 85%	

^{*1} Machine must be charged for at least 48 hours. With optional memory installed, approx. 17 hours of memory back up.

^{*2} Main unit only. Not include drum cartridge or toner bottle.

Fax-Related

Item	Specifications
Scanline density	Scanner Scanner ultra-high resolution mode: Main scan 600 dpi × sub scan 600 dpi, or main scan 16 dots/mm × sub scan 15.4 lines/mm ^{*1} High density mode : Main scan 8 dots/mm × sub scan 7.7 lines/mm ^{*1} Standard mode : Main scan 8 dots/mm × sub scan 3.85 lines/mm ^{*1} Printer : Main scan 16 dots/mm × sub scan 15.4 lines/mm
Data transmission speed	33600, 31200, 28800, 26400, 24000, 21600, 19200, 16800, 14400, 12000, 9600, 7200, 4800, 2400 bps (Automatic selection)
Optimum line	Input phone line
Electronic transmission speed	Between 2 and 3 seconds (33600bps) ^{*2}
Encoding Method	MH/MR/MMR/JBIG/MSE (Independent)

*1 Communication with machines not equipped with this mode is not available.

*2 Based on transmission of ITU-T Test Document 1 to a Muratec fax machine. Your transmission times will vary, but your fax machine always will provide the fastest transmission speeds possible under ITU-T guidelines and phone-line conditions.

Copy-Related

Item	Specifications
Scanline density	Scanner: 600 × 600 (dots/inch) Printer: 600 × 600 (dots/inch)
Warm-up time ^{*1}	Max. 15 seconds (in low power mode)/max 17 seconds
Fist copy time ^{*2}	5.0 seconds
Continuous copying speed ^{*2}	28 pages per minute
Continuous copy	1 - 999 copies

*1 Room temperature: 73.4°F (23°C)

*2 Letter, using first level cassette

Option-related

2-level paper unit

Item	Specifications
Paper Size	Letter, Letter, Legal, 11"×17", Half-letter, F4, Executive, Executive, A3, B4, A4, A4, B5, B5
Paper storage capacity	500 sheets (64 g/m ² × 2 levels)
Power	Supplied from main unit
Power consumption	15 W or lower
Weight	Approx. 27.3 Kg (59.5 lb)
Machine dimensions	W22.5 × H21.5 × D10.4 inches (W570 × H548 × D263 mm)

Appendix

1-level paper unit

Item	Specifications
Paper Size	Letter, Letter [□] , Legal, 11"×17", Half-letter, F4, Executive, Executive [□] , A3, B4, A4, A4 [□] , B5, B5 [□]
Paper storage capacity	500 sheets
Power	Supplied from main unit
Power consumption	15 W or lower
Weight	Approx. 23.5 Kg (48.5 lb)
Machine dimensions	W22.5 × H21.5 × D10.4 inches (W570 × H548 × D263 mm)

Large capacity cassette

Item	Specifications
Paper Size	Letter [□]
Paper storage capacity	2500 sheets
Power	Supplied from main unit
Power consumption	45 W or lower
Weight	Approx. 27.4 Kg (57.3 lb)
Machine dimensions	W22.4 × H22.2 × D10.4 inches (W570 × H564 × D263 mm)

Duplex Unit (option)

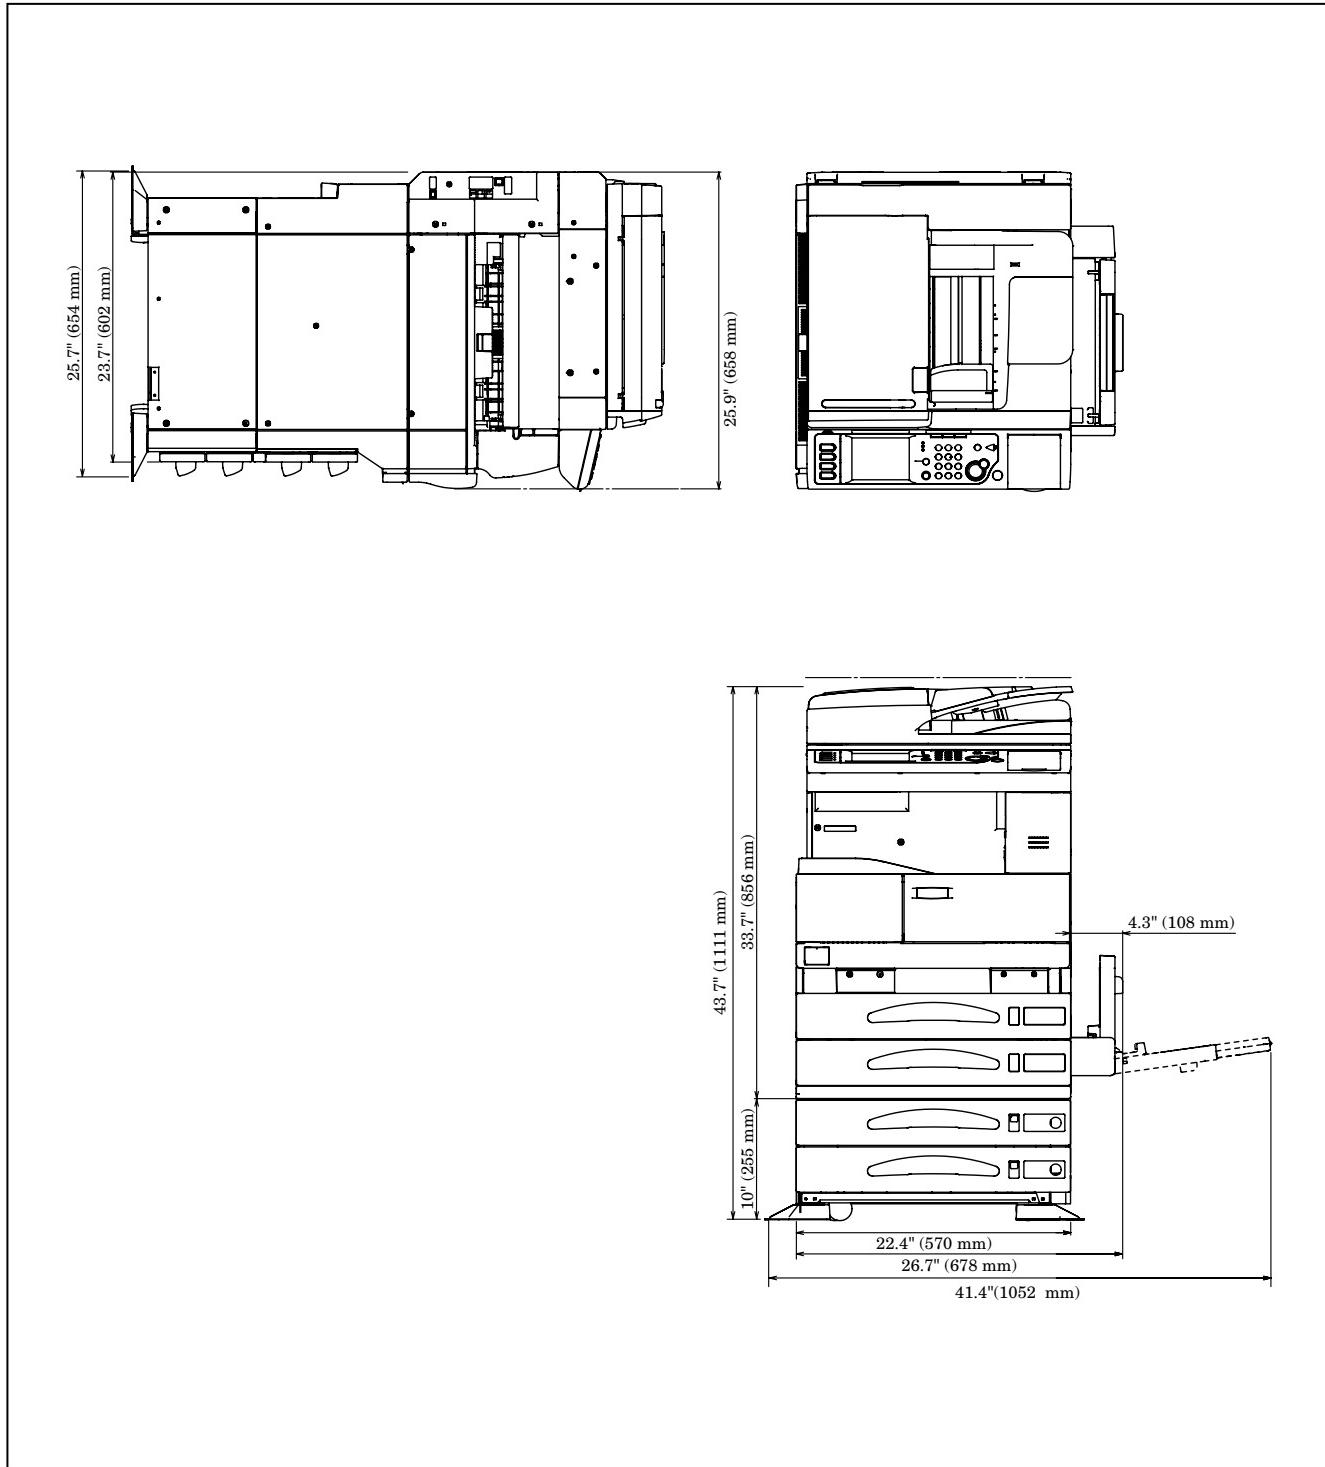

Item	Specifications
Paper Size	Letter, Letter [□] , Legal, 11"×17"
Paper type	Plain paper, recycle paper
Power	Supplied from main unit
Power consumption	10 W or lower
Weight	Approx. 2.2 Kg (4.9 lb)
Machine dimensions	W3.5 × H16.5 × D14.0 inches (W89 × H419 × D358 mm)

Switchback Unit (option)

Item	Specifications
Paper Size	Letter, Letter [□] , Legal, 11"×17", Half-letter
Paper type	Recycled paper (56 to 90 g/m ²)
Power	Supplied from main unit
Power consumption	15 W or lower
Weight	Approx. 1.7 Kg (3.7 lb)
Machine dimensions	W338 × H481 × D148 mm (W13.3 × H18.9 × D5.8 inches)

2-Bin Tray (option)

Item	Specifications
Number of bins (number of trays)	1 (the paper discharge tray on the main unit is used as the second bin)
Paper capacity	Bin 1: plain paper (specified type) 100 sheets Bin 2 (discharge tray): plain paper 250 sheets Special paper: pasteboard (24.25 - 55.75 lb), OHP film, postcard, envelopes, labels
Weight	Approx. 1.7 Kg (3.7 lb)
Machine dimensions	W450 × H443 × D75 mm (W17.7 × H17.4 × D3.0 inches)
